The monthly electronic catalog of new titles for
booksellers, wholesale distributors and librarians.

Monthly announcement!

Springer publishes roughly 400 new titles per month. Every title is announced a few months before it is published in the **Springer NEWS**, making this catalog the best tool for finding and tracking hot-off-the-press new books.

Easy to sign up! springer.com/alerts

Register for SpringerAlerts for Booksellers and you will receive an e-mail newsletter for every new issue of **Springer NEWS Online**.

Download any time! springer.com/NEWSonline

Go directly to the web site and download whatever files you want. Each issue remains online for six months.

- 179 Abdalla (Eds), Security and Cryptography for Networks, SCN 2014 (Lecture Notes in Computer Science, LNSC 8642)
- 179 Abramowicz (Eds), Business Information Systems Workshops, Larnaca (Lecture Notes in Business Information Processing 183)
- 53 Addis, Natural and Artificial Reasoning (Advanced Information and Knowledge Processing)
- 37 Agarwal et al., Dynamic Inequalities On Time Scales
- 37 Agarwal/Sen, Creators of Mathematical and Computational Sciences
- 1 Agrawal (Eds), Emergency Approaches to Neurosurgical Conditions
- 146 Aguilera-Barchet, A History of Western Public Law
- 53 Agustin-Aquino et al., Computational Counterpoint Worlds, Software (Computational Music Science)
- 69 Aihara (Eds), Analysis and Control of Complex Dynamical Systems, Dynamic Attractors (Mathematics for Industry 7)
- 179 Ait Ameer (Eds), Model and Data Engineering, MEDI 2014 (Lecture Notes in Computer Science, LNPSE 8748)
- 69 Al-Ekabi (Ed), European Autonomy in Space (Studies in Space Policy)
- 69 Al-Ekabi (Eds), Yearbook on Space Policy 2012/2013 (Yearbook on Space Policy)
- 106 Alarcon (Eds), Silver Nanoparticle Applications (Engineering Materials)
- 158 Alexander Rompf, Trust and Rationality (Forschung und Entwicklung in der Analytischen Soziologie)
- 50 Almond et al., Bayesian Networks in Educational Assessment (Statistics for Social and Behavioral Sciences)
- 37 Ammari/Nicaise, Stabilization of Elastic Systems by Collocated Feedback (Lecture Notes in Mathematics 2124)
- 179 Amyot (Eds), System Analysis and Modeling: Models and Reusability, SAM 2014 (Lecture Notes in Computer Science, LNPSE 8769)
- 177 Angelov (Eds), Intelligent Systems'2014, September 24-26 (Advances in Intelligent Systems and Computing 322)
- 110 Ansal (Eds), Perspectives on Earthquake Geotechnical Engineering (Geotechnical, Geological and Earthquake Engineering 37)
- 125 Ansari (Eds), Phytoremediation
- 64 Aoki (Eds), Calculations on nonlinear optical properties for large systems (SpringerBriefs in Molecular Science)
- 64 Apelblat, Citric Acid
- 118 Armon (Eds), Environmental Indicators
- 110 Asadollahfardi, Water Quality Management (SpringerBriefs in Water Science and Technology)
- 1 Asai (Eds), Off-Pump Coronary Artery Bypass
- 70 Atanassov, Index Matrices: Towards an Augmented Matrix Calculus (Studies in Computational Intelligence 573)
- 179 Auer (Eds), Algorithmic Learning Theory, ALT 2014 (Lecture Notes in Computer Science, LNAI 8776)
- 53 Aumasson et al., The Hash Function BLAKE (Information Security and Cryptography)
- 133 Aust, Vertical Cooperative Advertising in Supply Chain Management (Contributions to Management Science)
- 177 Awrejcewicz (Eds), Mechatronics - Ideas for Industrial Application (Advances in Intelligent Systems and Computing 317)
- 38 Axler, Linear Algebra Done Right (Undergraduate Texts in Mathematics) 3rd ed.
- 133 Ayadi (Eds), Economic and Social Development of the Southern and Eastern Mediterranean Countries
- 70 Azar (Eds), Advances and Applications in Sliding Mode Control systems (Studies in Computational Intelligence 576)
- 70 Azar (Eds), Computational Intelligence Applications in Modeling and Control (Studies in Computational Intelligence 575)
- 125 Aziz (Eds), Toxicological Immunohistochemistry

Emergency Approaches to Neurosurgical Conditions

Patients with neurosurgical conditions are almost always referred from either primary care physicians, neurologists, internist or a specialist in family medicine. This comprehensive guide will answer commonly asked questions about common neurosurgical conditions related to brain and spinal cord, in an attempt to fill in the gap and answer numerous questions that arises after a diagnosis is made on the loved ones.

Features

► This book is a comprehensive guide for patients and families under neurosurgical care ► Is it co-authored by reputed neurosurgeons who have a mastery in the subject ► This book is from the physicians and the patients/families to the future patients and families whose loved ones are under neuro-surgical care or in the neuro-intensive care unit

Contents

1. Non Malignant Brain Tumors.- 2. Malignant Brain Tumors.- 3. Pituitary Tumors.- 4. Pediatric Brain Tumors.- 5. Congenital Neurosurgical Problems.- 6. Hydrocephalus.- 7. Chiari Syndrome.- 8. Brain Aneurysms.- 9. Brain Arteriovenous Malformations.- 10. Moya Moya Disease.- 11. Medical Management of a Stroke.- 12. Neuro-Interventional Management of a Stroke.- 13. Symptoms and Signs to Look for After a Spinal Cord surgery.- 14. Evaluation of Spinal Alignment.- 15. Herniated Discs of the Spine.- 16. Spinal Fusions.- 17. Spinal Tumors.- 18. Epilepsy

Off-Pump Coronary Artery Bypass

Less invasive surgeries are becoming necessary because the world's increasingly older populations are becoming viable candidates for coronary artery bypass operations. Because of the technical difficulty, the percentage of off-pump coronary artery bypass (OPCAB) in coronary artery bypass graft (CABG) surgery CABG is still low in the US and Europe. However, in Japan OPCAB is the standard CABG, making up more than 60% of all CABGs. In addition, the operative mortality in primary elective OPCAB is very low (less than 1% in 2010). Moreover, the trend of utilizing arterial grafts has produced excellent long-term outcomes. This book first describes the state of the art of OPCABs performed by Japanese surgeons with the "Kaizen Mind" and explores the techniques and approaches that explain why OPCABs are such a huge success in Japan.

Features

► This book provides an overview of OPCAB in Japan ► Clearly demonstrates how unique and useful the Japanese OPCAB method is ► Written for both residents and specialists interested in learning about the latest trend in cardiovascular surgery

Measurement Tools for a Health Survey on Nutrition, Physical Activity and Lifestyle in Children

The European IDEFICS Study

Features

► Designed to serve as a toolbox for epidemiological research, with a unique wealth of survey instruments, including questionnaires and standard operations procedures ► The instruments were designed to be modular, to allow for country adaptations, and have been tested and applied in a large survey in eight European countries

Contents

Introduction.- Overview over IDEFICS: study design.- Overview over IDEFICS survey procedures: Choice of instruments, survey modules, Quality Control concept.- Physical examinations.- Biological samples SOPs for collection, shipment, storage and documentation.- SACINA, 24HDR.- FFQ diet questionnaire.- Measurement of PA with accelerometers.- Data from official records.- Parental questionnaire.- Setting and caretaker/ teacher questionnaires.- Qualitative studies.- Process evaluation.- Sensory perception and food preferences.- Physical fitness.- Electronic Appointment System (EAS).- Re-print of all questionnaires, examination sheets and GSM.

Peripheral and Cerebrovascular Intervention

Peripheral and Cerebrovascular Intervention draws upon experts from diverse fields to provide readers with a comprehensive foundation for understanding and performing endovascular procedures—from the basic steps to the most current and advanced techniques. Individual chapters focus on primary intervention sites, including lower extremity, renal/mesenteric, subclavian/upper extremity, carotid/vertebral, intracranial and venous interventions. Additionally, chapters covering critical limb ischemia and abdominal and thoracic aortic aneurysms are included.

Features

▶ Most current and advanced techniques for peripheral and cerebrovascular interventions ▶ Experts from diverse fields provide a comprehensive foundation to understand and perform endovascular procedures ▶ A valuable resource for the busy practitioner

Contents

Peripheral and Cerebrovascular Disease.- Lower Extremity Intervention.- Critical Limb Ischemia.- Renal and Mesenteric Intervention.- Subclavian and Upper Extremity Interventions.- Carotid and Vertebral Intervention.- Intracranial Intervention.- Abdominal and Thoracic Aortic Aneurysms.- Venous Intervention.

Positron Emission Tomography

A Guide for Clinicians

Features

▶ Covers the technical aspects of PET and PET-CT for better understanding of the images and the information ▶ Highlights the difference between images obtained from CT and MRI in the perspective of clinical importance ▶ Describes and justifies indication for PET imaging in different cancer types ▶ Written by top experts working at state-of-the-art high-volume institutions

Contents

Positron Emission Tomography (PET) – an overview.- Development of Positron Emission Tomography (PET) - A historical prospective.- Planning of a PET Facility in India.- PET in comparison with other imaging modalities.- Technical considerations during PET imaging.- Application of PET in Oncology (Overview).- Application of PET in Neurology (Overview).- Application of PET in Cancer of the Brain.- Application of PET in Cancer of the Naso-Pharynx.- Application of PET in Cardiology.- Application of PET in Breast Cancer.- Application of PET-CT in lung cancer.- The Current Status and Future Potentials.- Application of PET in Cancer of Gastro-Intestinal System.- Application of PET in Cancer of the Genito-Urinary System.- Application of PET in Cancer of the Endocrine Organs.- Application of PET in Cancer of the Bone and Bone Marrow.- Application of PET in Infection and inflammation.- Application of PET in therapy planning.- Basic principles and functional aspects of a medical Cyclotron.- Basic principles of CT Imaging.- Fundamentals of MRI Imaging.- Comparison of PET-CT with PET-MRI.

Gynecologic Oncology

A Pocketbook

During this age of advanced technology, there is an incredible amount of dynamic literature surrounding the diagnosis and treatment of gynecologic cancers. Despite this information surplus, house officers and junior faculty studying gynecologic oncology indicate a need for a reliable, easily accessible, streamlined resource for everyday use. Gynecologic Oncology: A Pocketbook is a collaborative effort that combines the perspectives of expert faculty and fellows in training in the field of gynecologic oncology. Not only is it incredibly portable, but the format in which the information is presented (bullet point, outline, tables and diagrams) allows for rapid access to valuable information and is unique amongst existing texts.

Features

▶ Unique format unlike anything else on the market ▶ Tables, diagrams, and bulleted lists are included throughout the book ▶ Streamlined, concise text

Contents

Section 1: Disease Sites.- Epithelial Ovarian Cancer, Low Malignant Potential and Sex Cord Stromal Tumors of the Ovary.- Cervical Cancer.- Cancer of the Vulvar and Vagina.- Uterine Corpus Cancers.- Gestational Trophoblastic Disease.- Section 2: Chemotherapy.- Chemotherapy for Gynecologic Cancer.- Section 3: Radiation Therapy.- Radiation Therapy in Gynecologic Cancer.- Section 4: Critical Care.- Critical Care.- Section 5: Palliative Care.- Palliative Care.

Ultrasonography in the ICU

Practical Applications

This text presents a basic guide of the principles and applications of ultrasound in the critical care setting.

Features

▶ This book can be used as a teaching tool for critical care fellows and residents interested in further training in ultrasound for the critically ill patient ▶ The text addresses the basic and clinical uses of ultrasound including clinical cases at the end of each of the 7 sections of clinical subdivisions ▶ Each chapter is written by experts in the field, and supplemented with illustrations and links to videos of actual ultrasound examinations in patients

Contents

I. Basics of Ultrasound.- 1. The Machine.- 2. Frequency and probes.- 3. Common Artifacts.- 4. The Doppler Effect.- II. Thoracic Ultrasound.- 5. The Pleura.- 6. The Lung.- 7. Procedures.- 8. Cases.- III. Echocardiogram for the Intensivist.- 9. Rationale.- 10. Limited echocardiogram vs. full service echo.- 11. The Windows.- 12. The Measurements.- 13. The interpretation.- 14. Cases.- IV. Operative Techniques in Epilepsy

This book describes the specific surgical techniques currently employed in patients with intractable epilepsy; it also covers the relevant technical aspects of general neurosurgery. All of the approaches associated with the various foci of epilepsy within the cerebral hemispheres are considered, including temporal and frontal lobectomies and corticectomies, parietal and occipital lobe resections, corpus callosotomy, hemispherectomy, and multiple subpial incisions. In addition, an individual chapter is devoted to electrocortical stimulation and functional localization of the so-called eloquent cortex.

Features

► Describes in detail the surgical procedures employed in patients with intractable epilepsy ► Explains functional localization of the eloquent cortex ► Covers relevant general aspects including the use of bipolar coagulation and performance of surgery under local anesthesia

Contents

Surgical techniques in epilepsy surgery.- Surgery under local anesthesia.- Electrocortical stimulation ("mapping").- Corticectomy.- Temporal lobe surgery.- Frontal lobe surgery.- Rolandic surgery.- Parietal lobe resections.- Occipital lobe resections.- Corpus Callosotomy.- Hemispherectomy.- Post-operative course.- History of epilepsy surgery.

Rodent Transplant Medicine

This book introduces transplantation in rodents as useful tools used in studying transplant immunobiology. Several solid organs (kidney, heart, liver) transplant models in rodents are described in this book. It can help surgical quality and save surgical time. The first part of the book provides a review of rodent transplant tolerance induction, the role of gender and body-weight in rodent transplantation, surgical instruments and organ preservation solutions. In the second part of the book, various organ-transplantation techniques in rodents are discussed in individual chapters. This book presents uniform surgical procedures in mouse and rats, which produce comparable data, efficiently enhancing the translational research from bench to non-human primates and beyond.

Features

► Describes useful tools for promoting the development of transplant immunology and microsurgical techniques ► Step by step illustration of surgical procedures in mouse and rat ► Enhance the translational research from bench to non-human primate and beyond

Contents

Rodent Transplantation Medicine.- T Cell Costimulatory Molecules.- Age in Rodent Organ Transplantation.- Role of Gender in Animal Transplantation.- Role of Body-Weight/Functioning Mass of Graft in Rodent Transplantation.- Illustration of Laboratory Facilities and Microsurgical Instruments.- Organ Preservation.- Rat Kidney Transplantation.- Rat Orthotopic Liver Transplantation.- Mouse Skin Transplantation.- Mouse Heterotopic Abdominal Heart Transplant Model.- Mouse Heterotopic Cervical Heart Transplant Model.- Mouse kidney Transplantation.- Mouse Liver Transplantation.

Behçet's Disease

From Genetics to Therapies

Although the cause of Behçet's disease is still unknown, it is well known that genetic factors, such as HLA-B51, are involved in the development of the disease. Recently, novel susceptibility loci including IL10, IL23R-IL12RB2, and endoplasmic reticulum amino-peptidase 1 have been identified, providing new insights into the pathogenesis of the disease. In addition to basic research, the beneficial efficacy of anti-TNF-alpha monoclonal antibodies has also been suggested for not only uveitis associated with the disease but also other subtypes of the disease such as entero-, vasculo-, and neuro- Behçet's disease. This book, besides reviewing basic and clinical aspects, covers the latest findings, including genetic studies and treatment with biologics for Behçet's disease.

Features

► Provides comprehensive information on Behçet's disease ► Covers the latest findings, including genetic studies and treatment ► An essential resource for both basic researchers and clinical physicians

Contents

1. Overview.- 2. The Immunopathology of Behçet's Disease.- 3. Genetics.- 4. Ocular Involvement.- 5. Vascular Involvement of Behçet's Disease.- 6. Neurological Involvement.- 7. Gastrointestinal Involvement.- 8. Mucocutaneous Manifestations.- 9. Perspective.

Advances in Medical and Surgical Cornea

From Diagnosis to Procedure

This book presents up-to-date information on the diagnosis and management of the spectrum of medical and surgical corneal diseases, with a special focus on new technology. The latest tools for diagnosing ocular surface disease, infectious keratitis, and ocular allergies are discussed, along with novel treatment options for these entities.

Features

► Presents up-to-date information on the diagnosis and management of medical and surgical corneal diseases ► Focuses especially on the impact of new technology ► Describes and discusses the latest surgical techniques

Contents

Diagnosis and treatment of ocular surface disease.- Diagnosis and treatment of infectious keratitis (PCR, Confocal).- Diagnosis and treatment of ocular allergies.- Imaging techniques for corneal disorders (non-infectious: KCN, ectasias: Pentacam, Schleimpflug, confocal, etc).- Contact lens technology for treatment of severe ocular surface disease and corneal ectasias.- Collagen crosslinking for keratoconus.- Anterior lamellar keratoplasty.- Endothelial keratoplasty (DSEK and DMEK).- Keratoprosthesis (Boston and OOKP).- Laser assisted keratoplasty and post-keratoplasty management (AK's).- Eye Banking: what the eye bank can do for you now (DMEK harvesting, Pre-cut, FLAK).

Technologies and Changing Paradigms for Disease Management

This comprehensive treatise on cutting edge tools and research provides a fascinating insight into the rapidly evolving field of diagnostic and therapeutic endoscopy. Accomplished international researchers and clinicians discuss the latest endoscopic advances in diverse areas including obesity, metabolic syndromes, management of peripancreatic fluid collections, endoluminal suturing techniques, fistula closure, management of Barrett's epithelium, cholangioscopy, chromoendoscopy, and high resolution manometry. Robotic endoscopy and natural orifice transluminal endoscopic surgery are also explored.

Features

- ▶ Written by specialists in their respective fields
- ▶ Richly illustrated with photos and illustrations
- ▶ A comprehensive treatise on cutting edge tools

Contents

Barrett's Esophagus.- Cholangioscopy.- Endoscopic Management of Peripancreatic Fluid Collections and Walled-Off Pancreatic Necrosis.- Bariatric Endoscopy.- Advances in Imaging and Evaluation of the Small Bowel and Colon.- High-Resolution Manometry.- Endoluminal Fistula and Perforation Closure.- Advances in EUS.- Endoscopic Submucosal Dissection.- Colon Widefield EMR.

Modern Management of Cancer of the Rectum

Modern Management of Cancer of the Rectum is intended to provide a comprehensive overview of all aspects of rectal neoplasms. It addresses epidemiology, biology, screening and chemoprevention, the role of imaging in diagnosis, staging and prognosis, radiation therapy, medical and surgical treatment, as well as new modalities of therapy, including laparoscopy, and transanal endoscopic surgery. A greater understanding of prognostic factors, patterns of spread and natural history has occurred during the past decade; together with new diagnostic modalities this has led to significant changes in the management of patients with rectal cancer. This book will be invaluable for all those who treat rectal cancer.

Features

► Comprehensive update of all aspects of rectal cancer ► Updated content covers the recent advances in the understanding of aetiology (prognostic factors, pattern of spread, natural history) ► Covers screening, diagnosis, genetics and treatment options for rectal cancer

Clinico-Pathological Atlas of Cardiovascular Diseases

The objective of this Atlas is to contribute to the knowledge of morphological findings of the main cardiovascular diseases among the various specialists who deal with people affected of heart diseases: cardiologists and cardiovascular surgeons, clinical and forensic pathologists, coroners, sports medicine doctors.

Features

► Contains 635 high definition colour figures presenting morphological findings (macro and microscopical) of the main cardiovascular diseases ► Cardiovascular diseases are presented from both, clinical and pathological perspectives, resulting from close collaboration between forensic pathologists and cardiologists ► Presented as a practical case-based approach to every disease

Contents

Methodology of cardiovascular autopsy.- Pulmonary Artery Pathology.- Pathology of Aorta.- Pathology of the pericardium.- Coronary atherosclerotic disease.- Non-atherosclerotic coronary disease.- Valve Pathology.- Cardiomyopathies.- Cardiac system pathology.- Cardiovascular pathology secondary to consumption of ethanol, drugs of abuse and medicaments.- Cardiac tumors.

Antiphospholipid Antibody Syndrome

From Bench to Bedside

This book, part of the series Rare Diseases of the Immune System, offers comprehensive, up-to-date coverage of the pathophysiology and management of the antiphospholipid syndrome (APS). Immunologic and genetic aspects are discussed and the pathogenic mechanisms responsible for such phenomena as APS-mediated thrombosis and pregnancy loss/complications are explained.

Features

▶ Provides up-to-date knowledge on the pathogenesis and management of the syndrome ▶ Presents and discusses innovative treatments in addition to standard treatment options ▶ Describes the involvement of other organs or organ systems

Contents

Foreword.- Preface.- 1 APS: Introductory notes.- 2 Immunology and Genetics of APS.- 3 The paradox of the lupus anticoagulant.- 4 The pathogenic mechanism(s) for APS-mediated thrombosis.- 5 The pathogenic mechanism(s) for APS-mediated pregnancy loss.- 6 Classification criteria.- 7 Non-classification criteria.- 8 Obstetric APS.- 9 APS and the nervous system.- 10 APS and renal involvement.- 11 Non-thrombotic hematologic manifestations in APS.- 12 Heart and APS.- 13 Skin and APS.- 14 Additional organs involved in APS (eye, ENT, GI, endocrine).- 15 Treatment of thrombosis.- 16 Treatment of pregnancy complications.- 17 Asymptomatic carries of APS.- 18 New treatments.- 19 Secondary APS.- 20 Catastrophic APS.

Teleophthalmology in Preventive Medicine

This book provides an up-to-date overview of the clinical applications, methods, and technologies of teleophthalmology within the field of preventive medicine. The ability of novel methods to detect the initial signs of neurodegenerative diseases on the basis of alterations in the retina is reviewed, and detailed attention is paid to the role of teleophthalmology in screening for vision-threatening diseases such as diabetic retinopathy, glaucoma, and age-related macular degeneration. A major part of the book is devoted to novel imaging methods and the latest information technologies, including advanced mobile communication and Web 2.0 applications in teleophthalmology. In addition, the initial projects of an interdisciplinary cooperation in preventive medicine are described. All of the authors are experienced in the scientific and practical aspects of teleophthalmology, including e-learning, and have produced a book that will meet the needs of all medical care providers interested in using teleophthalmology.

Features

▶ Describes the medical applications, methods, and technologies of teleophthalmology in the field of preventive medicine ▶ Covers novel imaging methods and the latest information technologies ▶ Describes the first projects of an interdisciplinary cooperation in preventive medicine

Contents

Applications of Teleophthalmology: Systemic Diseases (Applications).- Ocular Diseases. Methods used in Teleophthalmology: Novel Imaging Devices.- Information Technologies.

Pocket Guide to Kidney Stone Prevention

Dietary and Medical Therapy

This book provides a concise, patient-directed approach to stone prevention. It defines who to evaluate and when to treat, and provides empiric guidelines for all stone formers. Specific treatment guidelines are also included, based on the kidney stone composition and the underlying metabolic abnormalities demonstrated by 24-hour urine stone risk profile.

Features

► All chapters are written by experts in their fields ► Provides a concise, patient-directed approach ► Provides a valuable resource for a broad base of clinicians in primary and specialty care

Contents

What is the risk of stone recurrence?.- General Nutrition Guidelines For All Stone Formers.- 24-hour Urine and Serum Tests: When and What?.- Nutrition Management of Hypercalciuria.- Hypercalciuria.- Nutrition Management of Hypocitraturia.- Medications.- Nutritional Management of Hyperoxaluria.- Nutrition Management of Uric Acid Stones.- Uric Acid Stones.- Cystinuria.- Struvite Stones, Diet, and Medications.- Laboratory Follow-Up of the Recurrent Stone Former.- Imaging (Cost, Radiation).- What to do about Asymptomatic Calculi?.- Acute Renal Colic and Medical Expulsive Therapy.- Stratifying Surgical Therapy.

Orbital, Lacrimal and Eyelid Emergencies

It can be argued that the orbit can no more be called 'Pandora's Box' because of the unpredictable nature of its contents. This perception has changed over the years due to the advent of improved diagnostic, in particular, imaging techniques. However, since medical residency provides very little exposure to orbital and adnexal disorders, most clinicians are inexperienced about how to deal with them. Facing an emergency situation where improper management can rapidly worsen the condition leading to blindness or even death of the patient is every ophthalmologist's nightmare. The emergent nature of these conditions do not provide for a leeway to refer these patients to an orbit & oculoplasty specialist, who are few and far between. By the time the patient reaches his destination, his vision maybe irrevocably lost. The legal implications of such mismanagement may be significant.

Features

► A practical guide to managing eye emergencies in clinical practice ► Covers all vision and sometimes life-threatening orbital and oculoplastic emergencies ► Written by leading experts in oculoplastic surgery

Chronomics and Ambulatory Blood Pressure Monitoring

This fascinating volume attempts to apply the concept of chronomics to the medical treatment of hypertension. It starts with the recent updates on chronomics, the analytic techniques and their application to community-based assessments. The authors advocate the use of 7-day/24-h records of blood pressure, which is effective to find masked hypertension, masked morning surge, and other rhythm abnormalities. Most organisms, from cyanobacteria to mammals, are known to use the circadian mechanism. However, our body systems also demonstrate circaseptan (roughly weekly), circannual (roughly yearly) and even longer rhythms.

Features

► Applies the idea and analysis technique of chronomics to the medical treatment of hypertension ► Includes a wealth of data and graphs collected from field studies ► Will benefit clinicians who want to increase the efficiency of blood pressure analysis and medical treatment, as well as research scientists who are interested in chronomics

Pocket Guide to Critical Care Pharmacotherapy

This is a no-nonsense guide to drug treatment in the intensive care unit. It covers the most commonly encountered conditions and is organized by system. Management of each condition is tersely outlined step-by-step in table format. The book also includes non-drug information that is essential to making informed, evidence-based pharmacotherapy decisions, such as risk scores, scales, and assessment tools. The Second Edition has been revised to reflect the latest critical care practice guidelines and up-to-date drug and non-drug information.

Features

► Up-to-date portable drug guide for the ICU ► Reflects latest critical care practice guidelines ► Most commonly encountered conditions, organized by system ► Concise, step-by-step presentations ► Important non-drug information included (e.g., risk scores, scales, and more) ► Selected recent references and Web resources

Management and Leadership – A Guide for Clinical Professionals

This book will provide anyone with an interest in the clinic with a basic guide on those things that are not taught during medical school or any other pre-clinical trainings. The line-up of authors was carefully assembled to include experts in all respective fields to give this volume the authority it requires to be a relevant text for many.

Features

► A basic guide for all hospital staff that wish to deliver high quality health care services ► The contributors are authorities in their respective fields ► A valuable guideline for handling ethically complex cases

Contents

Succeeding in your consultant interview.- Clinical leadership and engagement: No longer an optional extra.- The art of negotiation, handling difficult behaviour, and facing the media.- Handling complaints, meetings, and presentations.- Performance appraisal and assessment.- Quality improvement.- Risk management.- Root cause analysis.- Occupational health and safety.- Coping with stress.- The nature of conflict in health-care.- Evidence based management.- Clinical handovers.- The educational role of senior hospital staff.- Mentoring.- Expert or impostor- understanding the role of the expert witness.- How to dress at work.- Managing ethically complex issues in critically ill patients - a neonatal perspective.- Communicating bad news in the health care organization.- Managing grief and its consequences at the workplace.

Atlas of Operative Maxillofacial Trauma Surgery

Post-Traumatic Deformity

This book will provide a fully comprehensive and highly illustrated (using mostly operative colour photographs) "how to" technical reference manual, demonstrating surgical procedures in a step by step manner. The aim is to enable the reader to understand how and why any particular procedure is undertaken.

Features

► All surgical procedures (in trauma) will be included which will be very useful for all trainees and surgeons ► Each injury pattern encountered in maxillofacial practice will be broken down into its component procedure, from very minor to major procedures ► The text is limited mainly to a relatively brief introductory section (outlining relative anatomy, indications and contraindications, advantages and disadvantages, complications) and legends for each picture, describing what is being done

Intramedullary Nailing

A Comprehensive Guide

This book contributes to the enhancement of fundamental and practical knowledge in the treatment of fractures, healing disturbances and bone disorders with intramedullary nailing. It promotes this biological and mechanical outstanding technique for appropriate indications and ameliorate the standard of care for those patients, who can profit from intramedullary nailing.

Features

► Provides practical knowledge in the treatment of fractures, healing disturbances and bone disorders with IM ► Promotes the biological and mechanical outstanding of IM ► Discusses the diverse technical and logistical equipment utilised for this technique

Targeted Therapies for Solid Tumors

This volume provides readers a comprehensive and state-of-the-art overview about the range of applications of targeted therapies for solid tumors. The sections of the book have been structured to review the oncogene addicted tumors, the pharmacology and clinical development of new molecularly targeted agents, the use of biomarkers as prognostic, predictive and surrogate endpoints, and the evaluation of tumor response and specific malignancies treated with targeted agents.

Features

- Provides a concise and comprehensive summary
- Published in Essentials in Current Clinical Pathology book series
- Written by a worldwide base of experts

Contents

Introduction.- Oncogene addicted tumors.- Pharmacology and clinical development of new molecularly targeted agents.- Biomolecular characterization of solid malignancies: biomarkers as prognostic, predictive and surrogate endpoints.- Evaluation of response in malignant tumors treated with targeted agents.- Targeted therapies in breast cancer.- Targeted therapies in head and neck cancers.- Targeted therapies in NSCLC.- Targeted therapies in gastric cancer.- Targeted therapies in pancreatic cancer.- Targeted therapies in HCC.- Targeted therapies in CRC.- Targeted therapies in GIST.- Targeted therapies in kidney cancer.- Targeted therapies in melanoma.- Novel Bone-Target Therapy in Osteoncology.

Ocular Motor Disorders and Vertigo

Diagnosis and Management

The book covers the clinically most relevant central and peripheral ocular motor and vestibular disorders. Clinically-oriented and easy-to-read, it describes how to take the history of a patient suffering from double vision, blurred vision, opsocloppia, vertigo, or dizziness. The procedure for taking the patient history is poorly understood, resulting in late or no diagnosis in many. The book also provides a detailed description of how to examine the central and peripheral ocular motor system and the central and peripheral vestibular system.

Feature

► Step-by-step approach in this book, beginning with the patient history followed by the clinical examination of the ocular motor and vestibular systems, the most important diagnoses, and the treatment options will motivate the reader to a complex topic

Contents

Taking the patient's history in: double vision.- blurred vision.- oscilloppia.- vertigo or dizziness.- Clinical examination of: double vision.- blurred vision.- oscilloppia.- vertigo and dizziness.- The most important: central and peripheral ocular motor disorders.- central and peripheral vestibular disorders.- How to treat a patient: central and peripheral ocular motor disorders.- vertigo and dizziness.

Glandular Lesions of the Uterine Cervix

Cytopathology with Histologic Correlates

This volume provides a compact, concise and up-to-date resource for pathologists and clinicians who are involved in women's health. The book summarizes the incidence, epidemiology and risk factors for cervical adenocarcinoma, while reviewing the normal histology of the cervix and glandular lesions of the cervix. The cytological appearance of glandular lesions of the cervix and their mimics is amply illustrated and discussed. Management of glandular lesions is also outlined.

Features

► Published in Essentials in Cytopathology book series ► Fits in lab coat pocket ► Majority of illustrations are in full color ► Illustration oriented accompanied by text in outline format

Contents

Introduction to endocervical glandular lesions.- Processing, Reporting and Sensitivity of Cervical Cytology with an Emphasis on Glandular Lesions.- Normal Histology and Cytology of the Endocervix and Endometrium.- Cytology of endocervical glandular neoplasia.- Cytologic mimics of endocervical glandular neoplasia.- Cytology of endometrial cells and lesions.- Cytology of extracervical adenocarcinoma.- Management of glandular lesions identified on cervical cytology and histology with suggestions for continuous quality improvement in the cytology laboratory.

Managing Patients with Chronic Pain and Addiction

This text will provide readers with a thorough review of the complex condition of chronic pain and addictions. The book was originally commissioned due to the need in the field for more literature on the topic. This concise pocket book will review epidemiology, clinical features, diagnosis, and medical management of both chronic pain and addiction. Busy healthcare professionals will benefit from this text, which will not only cover the foundation of the management of both conditions and together, but discuss up-to-date national and international treatment guidelines, upcoming therapies and REMS.

Features

► A concise book for healthcare professionals to better understand the background and development of chronic pain and addiction ► A comprehensive guide on major diagnosing, staging and treatment guidelines for chronic pain and addictions ► Special chapter on TIRF REMS

Contents

Uterine Myoma, Myomectomy and Minimally Invasive Treatments

Uterine myomas are the most common benign tumors in women, affecting the half of women and mostly in reproductive age. Myomas cause significant morbidity and are the single most common indication for hysterectomy around the world. Thus, myomas represent a major personal and public health concern worldwide. The diagnosis of fibroids can be established based on ultrasound and radiological imaging.

Features

► This book will provide a full knowledge on myomas and their well-known problems ► Each chapter is composed of many illustrations, photographs and images in order to better assist the reader ► This book will help specialists, doctors, fellows and students to quickly and easily understand how to manage women with myomas

Contents

1. Pathophysiology of Uterine Myomas and its Clinical Implications.- 2. Genetics and Genomics of Uterine Myomas.- 3. Uterine Myomas and Histopathology.- 4. Uterine Myomas: Clinical Features.- 5. Uterine Myomas and Fertility.- 6. Uterine Fibroid Pseudocapsule.- 7. Adenomyosis and Adenomyomata.- 8. Imaging of Myomas.- 9. Hysteroscopic Myomectomy.- 10. Myoma Embolization and New Ablation Procedures.- 11. Laparoscopic Myomectomy.- 12. Laparoscopic Assisted Myomectomy.- 13. Robotic Assisted Myomectomy.- 14. Vaginal Myomectomy.- 15. Myoma in Pregnancy.- 16. Cesarean Myomectomy.- 15. Complications of Myomectomy.

Ectopic Pregnancy

A Clinical Casebook

Comprised exclusively of clinical cases covering ectopic pregnancy, this concise, practical casebook will provide clinicians in reproductive medicine and obstetrics/gynecology with the best real-world strategies to properly diagnose and treat the various forms of the condition they may encounter.

Features

► A case-based, practical guide to the management of ectopic pregnancy ► Discusses criteria and diagnosis of ectopic pregnancy as well as its many types ► An excellent resource for practicing clinicians, residents and students alike

Contents

Identification of Risk Factors of Ectopic Pregnancy.- Discriminatory Serum hCG level for Ectopic Pregnancy.- Pregnancy of Unknown Location.- Ectopic Pregnancy After In-Vitro Fertilization.- Surgical Treatment of Ectopic Pregnancy.- Bleeding Ectopic Pregnancy.- Medical Treatment of Ectopic Pregnancy.- Compliance with Methotrexate Treatment for Ectopic Pregnancy.- Inadvertent Methotrexate Administration.- Effect of Methotrexate Treatment for Ectopic Pregnancy on Current and Subsequent Pregnancy.- Interstitial Pregnancy.- Cervical Pregnancy.- Ovarian Ectopic Pregnancy.- Cesarean Scar Pregnancy.- Abdominal Pregnancy.- Intramural Pregnancy.- Heterotopic Pregnancy.- Retroperitoneal Ectopic Pregnancy.- Ectopic Molar Pregnancy.- Rudimentary Uterine Horn Pregnancy.- Fertility after Tubal Ectopic Pregnancy.

Cancer-Related Fatigue

Cancer-related fatigue (CrF) is increasingly recognized as a significant problem for patients with cancer at all stages, including those undergoing therapy and in remission. In fact, studies have shown that CrF causes patients more distress than pain, nausea, or vomiting and yet fatigue is still often undertreated and rarely studied. However, several new treatments such as are being investigated to determine the most effective ways to manage this debilitating symptom and improve patient quality of life. Cancer-Related Fatigue will provide a concise overview of this condition, with an evidence-based discussion of diagnosis, treatment, and long-term management.

Features

- ▶ An ideal resource for general practitioners, oncologists, nursing specialists, and medical trainees interested in supportive care in oncology
- ▶ Includes specifically targeted, clinically-relevant information with aim to positively impact patient care
- ▶ An up-to-date, evidence-based discussion of recent drug developments in the cancer supportive care field

Contents

Introduction.- Etiology and pathogenetic factors.- Nonpharmacological treatment of cancer-related fatigue.- Pharmacological treatment of cancer-related fatigue.- Recommendations for the management of cancer-related fatigue.

Lipid Management

From Basics to Clinic

The purpose of this work is to provide an update on our understanding of lipids in the clinic using information from recent clinical trials and in special populations. This will be a concise, easy to read book. We will cover LDL, HDL and triglyceride metabolism in the first chapters. We will provide updates from recent HDL trials where raising HDL cholesterol did not translate into reduced cardiovascular events and revisit the role of HDL cholesterol in heart disease (Dr. Yassine). The vast majority of authors are confirmed. Dr. Goran will review lipids abnormalities in children with a particular focus on vulnerable populations (emphasis on ethnicity and childhood obesity). Dr.

Features

- ▶ Practical in design with easy to read, bullet pointed chapters
- ▶ Comprehensive overview of state of lipid management
- ▶ Includes abundant algorithms and tables

Contents

Basics of Lipoprotein Metabolism.- Genetics of Lipid Disorders.- Lipid and Inflammation in Atherosclerosis.- Dyslipidemia: Relationship to Insulin Resistance, Fatty Liver, and Sub-clinical atherosclerosis.- Is low HDL cholesterol a marker of a mediator of cardiovascular disease?.- Approach to the patient with lipid disorders.- The Effects of Diet in Hyperlipidemia.- Statins.- Non-alcoholic Fatty Liver Disease (NAFLD): The Lipid Disease of the Liver and the Effect of Statins.- Statins in Heart Failure.- Statins in Chronic Kidney Disease.- Non-statin therapies.- LDL Apheresis.- Dyslipidemia in HIV.- New and Emerging Lipid Therapies.

The Clinician's Guide to the Treatment of Obesity

Presenting detailed information on treatment of the obese patient, this handy, concise title is designed not only to educate practitioners about obesity but, most importantly, to provide practical strategies in the comprehensive approach to treating this disease. Replete with bulleted lists and tables for easy referencing, this unique reference provides a comprehensive overview of the pathophysiology and natural history of obesity as well as a thorough review of available treatment options. The book's early chapters discuss the disease of obesity, its corresponding health burden on individuals and society, and the psychosocial morbidity and effect of weight loss.

Features

► Comprehensive text that offers a comprehensive overview of the pathophysiology and natural history of obesity ► Practical, state-of-the-art clinical guidance on diagnosing and treating the obese patient ► Covers nonsurgical and surgical aspects of treatment

Contents

Foreword.- The Disease of Obesity.- The Health Burden of Obesity.- Psychosocial Morbidity and the Effect of Weight Loss.- Dietary and Lifestyle Strategies for Weight Loss.- Physical Activity and Writing an Exercise Prescription.- The Doctor's Tool Kit: Pharmacotherapy for the Patient with Obesity.- Roux-en-Y Gastric Bypass: Procedures and Outcomes.- Sleeve Gastrectomy: Indications, Procedure and Outcomes.- Laparoscopic Adjustable Gastric Banding: Procedures and Outcomes.- Perioperative Care of the Surgical Patient.- Complications of Weight Loss Surgery.

MDCT and MRI of the Liver, Bile Ducts and Pancreas

This handbook is a concise practical guide for residents and general radiologists that will offer reliable assistance during the performance and reporting of multidetector row computed tomography and magnetic resonance imaging in patients with Liver Bile Ducts and Pancreas conditions. It is organized alphabetically, primarily according to disease or condition, permitting easy and fast consultation. Entries typically include a short description of pathological and clinical characteristics, guidance on selection of the most appropriate imaging technique, a schematic review of potential diagnostic clues, and useful tips and tricks. Some helpful illustrations and schemes are also included. The book is the fourth in the new Springer handbook series, A-Z Notes in Radiological Practice and Reporting.

Features

► Provides answers to practical questions that arise during day-by-day reporting of MDCT and MRI ► Highlights key imaging findings and aids in selection of imaging technique ► Permits easy and fast consultation

Planning and Care for Children and Adolescents with Dental Enamel Defects

Aetiology, Research and Contemporary Management

Defective development of tooth enamel or dentin is a significant dental problem for children and adolescents in various respects, and dentists and other oral health workers find managing these problems challenging and stressful.

Features

- Explanation of the problems to aid diagnosis
- Practical management recommendations
- Summary of current research directions

Contents

Introduction.- Prevalence and Aetiology of Enamel Defects.- Syndromes and Diseases Associated with Enamel Defects.- Molar Incisor Hypomineralisation: Prevalence and Diagnosis.- Aetiology.- Impact on Enamel Structure.- Amelogenesis Imperfecta and Other Genetic Enamel Defects.- Syndromes and Diseases Associated with Enamel Defects.- Impact of Defective Enamel on Quality of Life.- Examination and Planning Immediate and Long Term Treatment.- Managing Sensitivity and Prevention of Dental Caries in Teeth with Enamel Defects.- Restorative Management of Primary Teeth.- Restorative and Orthodontic Management of Permanent Teeth from Eruption to the Definitive Restorations.- Improving the Enamel – What are the Possibilities and the Future.- Conclusion.

Sinus Grafting Techniques

A Step-by-Step Guide

Placement of endosseous implants in the posterior maxilla is often difficult because of a lack of supporting bone. Sinus augmentation procedures have therefore been extensively used for the treatment of the edentulous atrophic posterior maxilla prior to implant placement. This book describes in detail the most widely used sinus grafting techniques as well as some innovative variations, with full coverage of both lateral and crestal approaches. A key aim is to assist the practitioner in selecting the appropriate sinus grafting technique based on the evaluation of a number of parameters that are described in detail and codified in a simple and practical way. Up-to-date information is also provided on grafting materials and on potential complications of sinus augmentation procedures and their treatment.

Features

- Step-by-step description of the widely used and innovative sinus grafting techniques
- Aid to selection of the appropriate technique based on a variety of parameters
- Up-to-date information on grafting materials
- Advice on potential complications of grafting procedures

Contents

Introduction and Biologic Basis of Sinus Grafting.- Anatomical and Physiological Considerations for Sinus Augmentation.- Update on Grafting Materials.- Lateral Sinus Grafting Approach.- Crestal Sinus Grafting Approach.- Guidelines for Optimal Treatment.- Complications.- Conclusions.

Cancer Biomarkers in Body Fluids

There is an obvious need for cancer biomarkers that can easily be measured and monitored in a noninvasive fashion using either nonspecific (circulation) or tissue-specific body fluids. The clinical application of body fluid markers, especially circulating protein targets in cancer management is not new. However, availability of modern sensitive technologies that have enabled the discovery of several "omics" cancer biomarkers in body fluids is accelerating at an exponential rate. Of even much importance are cancers located in remote parts of the body that are not easily accessible - e.g., ovarian, lung, and pancreatic cancers. The need for coordinated validation of such biomarkers by industries, regulatory bodies, and academics for clinical translation is urgent. This book provides both an extensive coverage of the use of body fluid biomarkers for cancer-personalized medicine. It offers a critical, albeit easy to comprehend thesis of the numerous cancer targets assayed in body fluids, and also provides synopsis of commercially available products.

Features

► Presents cancer biomarkers for noninvasive diagnosis of 18 different body fluids ► Shows prospectives for a coordinated validation of cancer biomarkers by industries, regulatory bodies, and academics for clinical translation ► Presents opportunities for cancer personalized medicine

Biofilm-based Healthcare-associated Infections Volume I

The aim of this book is to provide readers with a wide overview of the main healthcare-associated infections caused by bacteria and fungi able to grow as biofilm. The recently acquired knowledge on the pivotal role played by biofilm-growing microorganisms in healthcare-related infections has given a new dynamic to detection, prevention and treatment of these infections in patients admitted to both acute care hospitals and long-term care facilities.

Features

► Provides readers with a wide overview of the main healthcare-associated infections ► Contains recently acquired knowledge on the pivotal role played by biofilm-growing microorganisms in healthcare-related infections ► Includes most innovative strategies for prevention and treatment

Contents

Biofilm Formation by Clinical Isolates and its Relevance to Clinical Infections.- Biofilm-based implant infections in orthopaedics.- Clinical and Microbiological Aspects of Biofilm-Associated Surgical Site Infections.- Peri-implant infections of oral biofilm etiology.- Microbiological diversity of peri-implantitis biofilms.- Anaerobes in biofilm-based healthcare-associated infections.- Microbial biofilm development on neonatal enteral feeding tubes.- Voice prostheses, microbial colonization and biofilm formation.- Microbial composition and antibiotic resistance of biofilms recovered from endotracheal tubes of mechanically ventilated patients.- Biofilm and Central Line Associated Bloodstream Infections.

Individualized Medicine

Ethical, Economical and Historical Perspectives

In 2009 the University Medicine Greifswald launched the “Greifswald Approach to Individualized Medicine” (GANI_MED) to implement biomarker-based individualized diagnostic and therapeutic strategies in clinical settings. Individualized Medicine (IM) has led not only to controversies about its potentials, but also about its societal, ethical and health economic implications.

Features

► A comprehensive and well-grounded outline of Individualized Medicine ► Presentation and assessment of concrete examples based on multi-year research ► Intensive discussion of barriers for translation concept of Individualized Medicine into clinical routine

Drug Treatment of Sleep Disorders

Following reviews on sleep physiology, regulation, pharmacology, and the neuronal networks regulating sleep and awakening, as well as a classification of sleep disorders, this book presents a number of major breakthroughs in the treatment of those disorders. These include recently approved drugs for treating insomnia, such as Doxepin; variations on previously approved molecules, e.g. Zolpidem sublingual preparation; or new chemical entities in advanced stages of clinical development, e.g.

Features

► Maximizes reader insights into recent breakthrough in drug treatment ► Describes drug development from bench to clinic ► Treats both basic research and clinical applications

JIMD Reports - Case and Research Reports, Volume 18

JIMD Reports publishes case and short research reports in the area of inherited metabolic disorders. Case reports highlight some unusual or previously unrecorded feature relevant to the disorder, or serve as an important reminder of clinical or biochemical features of a Mendelian disorder.

Features

► Unique collection of case and research reports on rare metabolic disorders ► Contains unusual or previously unrecorded features relevant to metabolic disorders ► All contributions rigorously peer-reviewed

Mechanism of Muscular Contraction

This book describes the evolution of ideas relating to the mechanism of muscular contraction since the discovery of sliding filaments in 1954. An amazing variety of experimental techniques have been employed to investigate the mechanism of muscular contraction and relaxation.

Features

► Describes the evolution of muscular contraction concepts since the discovery of sliding filaments ► Includes detailed scientific histories of principal investigators in the field ► Features information on contraction coupling and the role of calcium in contraction and relaxation

Contents

Setting the Stage: Myosin, Actin, Actomyosin and ATP.- Birth of the Sliding Filament Model of Muscular Contraction: Proposal.- Glory Days: Establishment of the Sliding Filament Model of Muscular Contraction in the 1950s and 1960s.- Excitation-Contraction Coupling and the Role of Calcium in Contraction and Relaxation in the 1950s and 1960s.- Mechanics and Energetics of Muscular Contraction: Before Sliding Filaments and into the Modern Era.- 1972 Cold Spring Harbor Symposia On Quantitative Biology: The Mechanism of Muscle Contraction. Problem Solved??.- Endosarcomeric and Exosarcomeric Cytoskeleton: Emergence of Cell and Molecular Biology in the Muscle Field.- Excitation-contraction Coupling and Regulation of Contraction in Skeletal Muscle: The Modern Synthesis.- Molecular Mechanism of Force Production: From the Difficult 1980s to the Supercharged 1990s and Beyond.- Index.

Zoonoses - Infections Affecting Humans and Animals

Focus on Public Health Aspects

The book will cover the most important zoonoses with a public health impact and debate actual developments in this field from a One Health perspective. The outline of the book follows a "setting" approach, i.e. special settings of zoonoses with a public health aspect, rather than presenting a simple textbook of an encyclopedic character.

Features

► One Health perspective: books dealing with zoonoses from a One Health perspective under a broader and interdisciplinary scale do not exist ► "Setting" rather than encyclopedic approach: books dealing with zoonoses with a public health aspect do not exist ► Interdisciplinary perspective with special interest chapters and reflection of currently debated issues appeal to students, professionals and interested public

Contents

Part I Zoonoses in food-chain animals with public health relevance.- Part II Zoonoses in food-chain and domestic animals: focus on antibiotic resistance.- Part III Important zoonoses in non-food animals.- Part IV Zoonoses in domestic animals.- Part V Zoonoses of wildlife species.- Part VI Waterborne Zoonoses.- Part VII Emerging and re-emerging zoonoses.- Part VIII Nature is the greatest bioterrorist: Zoonotic pathogens as bioterroristic agents.- Part IX Controversial or non-resolved issues.- Part X Economic and ecological aspects of zoonoses.- Index.

BRAF Targets in Melanoma

Biological Mechanisms, Resistance, and Drug Discovery

This volume contains a collection of writings from the leaders in the fields of Molecular Biology and Melanoma Research which will begin to tell the ever-expanding story of the most recent findings, discoveries, and potential of BRAF-directed targets in melanoma. Recent research has shown that BRAF inhibitors are effective for a short period of time, but there is little hope that this drugs as single agents will lead to durable benefit in a majority of patients.

Features

► Examines BRAF-directed targets in melanoma including molecular biology/signal transduction, molecular diagnostics, immunology, and next-generation analytics ► Highlights and summarizes the unique biological mechanisms of how BRAF-inhibitors work and why they ultimately fail ► Explores combinations of molecular targeted therapy and how molecular targeted therapy may interact with immune-based therapy

Contents

Melanoma: Historical Context.- Melanoma Pathogenesis.- Molecular Diagnostics and Tumor Mutational Analysis.- Clinical Utility of BRAF-targeted therapy in Melanoma.- The Ethics of Randomized Trials in Oncology.- Parallel and Serial Blockade Strategies in BRAF-Mutant Melanoma.- Targeting the cell cycle and p53 in combination with BRAF-directed therapy.- Combination BRAF-directed therapy and immunotherapy.- Moving Forward: Making BRAF-Targeted Therapy Better

T Helper Cell Differentiation and Their Function

This book will focus on the differentiation and regulation of subsets of CD4+ T cells. It will also cover other aspects of research on these cells, which has made great advances in recent years, such as subsets' plasticity and their role in healthy and disease conditions. The book provides researchers and graduate students with a cutting-edge and comprehensive overview of essential research on CD4+ T cells.

Features

► Summarizes cutting-edge research on CD4+ T cells differentiation ► Covers all major subsets of CD4+ T cells, as well as two untypical ones, Th9 and Th22 ► Suggests potential applications associated with CD4+ T cells in the clinic

Contents

Overview of orchestration of CD4+ T cell subsets in immune responses.- Th1/Th2 cell differentiation and molecular signals.- Th1/Th2 cell's function in immune system.- Regulatory T Cell differentiation and their function in immune regulation.- Th17 differentiation and their pro-inflammation function.- Tfh Cell differentiation and their function in promoting B cell responses.- Differentiation, Regulation and Function of Th9 Cell.- The biology and functions of Th22 cell

Dan Shen (Salvia miltiorrhiza) in Medicine

Volume 1. Biology and Chemistry

This book reviews research on Dan Shen, compiles data from clinical trials and biological experiments, and summarizes the latest research advances. It covers the medicinal herb, herbal pieces, and new proprietary drugs that contain it; it also covers simple and compound, traditional and contemporary formulas, and addresses a broad range of subjects, including: standardized cultivation; biodiversity; effective substances and their biological activities; quality control; and clinical trials. The book goes on to present the clinical trials on Dantonice, especially focusing on its therapeutic effects for coronary heart disease. It discusses compound prescriptions and compatibilities, from the herbal piece level to composition level, and describes approaches to research on modern Chinese medicine. Volume 1 describes the biology and chemistry of Dan Shen, while Volume 2 focuses on pharmacology and quality control.

Features

▶ Introduces the scientific research and evidence based medicine of Dan Shen ▶ Present the clinical trials on Dantonice for coronary heart disease ▶ Offers the research and development experience for other Traditional Chinese Medicine

Contents

Materia Medica and Plant Resource.- Distribution and Habitat of Danshen.- Biological Characters of Danshen.- A Study on the Cultivation of Danshen.- Danshen's in vitro Culture.- Genetics and Breeding of Danshen.- Water Soluble Components of Danshen.- Liposoluble chemical constituents in Danshen.

Cellular Therapy for Stroke and CNS Injuries

Cellular therapy for stroke and neural trauma has gained worldwide attention during the last decade and has shown some promising results. Various cells, including neural stem cells, bone marrow stem cells, endothelial progenitor cells, and many others have had protective or regenerative effects in animal models. The proposed book will address recent research on all relevant cell types. In addition, it will provide information on cell isolation and culture skills, transplantation methods, and neurological functional evaluations. This is the first book to focus on cellular therapy for stroke and other CNS injuries.

Features

► First book to summarize cellular therapy for stroke ► Comprehensive overview of all the cell types that can be used therapeutically ► Guide book intended for researchers, clinicians, and professionals

Contents

Basic studies for neural stem cells in the brain.- Basic studies for neural stem cells in the brain.- The role of endogenous neural stem cells in ischemic stroke.- Bone marrow mesenchymal stromal cell-a neurorestorative therapy for stroke.- Cord Blood as a Treatment for Stroke.- The role of endothelial progenitor cells in stroke.- Endothelial progenitor cell therapy in stroke.- Adipose-derived stem cells: isolation and culturing.- Transplantation of adipose-derived stem cells in stroke.- Endogenous Neurogenesis after Traumatic Brain Injury.

Critical Studies in Diversity Management Literature

A Review and Synthesis

This book critically examines current workplace diversity management practices and explores a nuanced framework for undertaking, supporting, and implementing policies that equally favor all people.

Features

▶ Critically examines current workplace diversity management practices ▶ Explores a nuanced framework for undertaking, supporting, and implementing policies that equally favor all people ▶ Presents critical perspectives that not only elevate respect for differences but also provide insights into the nature and dynamics of differences in view of a more inclusive organizational environment

Contents

Chapter 1: Workplace Diversity: A Resource or a Source of Conflict?.- Chapter 2: Different Approaches to Managing a Diverse Workforce.- Chapter 3: The Rhetoric of Diversity Management: How Critical Diversity Studies Explicate Organizational Appropriation of Differences.- Chapter 4: The Social Construction of Diversity Discourses: Critical Perspectives on Diversity Management, Power and Inequality.- Chapter 5: Operationalizing Critical Diversity Theories: A Contextual Framework of Implementing New Diversity Practices.

Practitioner's Guide to Legal Issues in Organizations

This book provides sound practical guidance on an array of specific hot button legal issues relevant to I/O practitioners and HR generalists. The core skillset possessed by many I/O psychologists can help inform a variety of legal issues beyond simple test validation, but little information is available that outlines the legal issues to which I/O principles can be applied or the specific methods that can be applied in response to such issues. Each chapter is devoted to a specific legal issue, and chapter content includes an overview of the issues, useful I/O methods to inform on the issue, and specific examples (case studies) that illustrate the best practices of application of I/O content knowledge to the specific issue.

Features

▶ Provides practical and specific guidance that can be used in both an academic setting and as a playbook for dealing with real organizational issues ▶ Written for both the I/O practitioner audience and for the broader audience interested in employment litigation issues ▶ Each chapter focuses on a specific legal issue

Contents

Adverse Impact Analysis.- Test Validation: Strategies.- Test Validations: Pitfalls.- Equal Pay.- Disability.- Wage and Hour.- Criminal Background and Credit Checks.- Physical abilities.- Public sector issues.

Foundations of Bilingual Memory

Foundations of Bilingual Memory provides a valuable update to the field of bilingual memory and offers a new psychological perspective on how the bilingual mind encodes, stores, and retrieves information. This volume emphasizes theoretical issues, such as classic memory approaches, Compound-Coordinate Bilingualism, Bilingual Dual Coding Theory, and Working Memory, about which relatively little has been written in the bilingual domain.

Features

► Book stresses a memory perspective, focusing on encoding, storage, and retrieval, as related to bilingual processes ► Book prepares teachers to teach the bilingual individual, while understanding the bilingual mind ► Discusses the latest theories and empirical methods used in the study of bilingual memory

Contents

Section I. Bilingual Models.- The Classic Bilingual Memory View: How Everything Started.- Bilingual Memory Models.- Bilingual Dual Coding Theory.- Connectionist Models of Bilingual Memory.- Models of Lexical Access and Bilingualism.- Section II. Episodic, Semantic, and Working Memory.- Episodic Memory.- Semantic Memory.- Explicit vs. Implicit Memory.- Emotion and Memory.- False Memories.- Working Memory.- Section III. The Neuroscience of Bilingual Memory.- The Neuroscience of Bilingual Memory.- Hemispheric Differences and Memory Storage.

Kidnapping and Violence

New Research and Clinical Perspectives

This book analyzes kidnapping in three general ways. First, kidnapping, including the threat of kidnapping, reflects a breakdown in the mechanisms of social control in society. At the level of interpersonal relations, the weakening of social control processes allows kidnapers to function in different situations and for diverse motives. This book addresses such questions as: What are the conditions under which kidnapers can evade social control by abducting or threatening to abduct another person? What factors trigger the response of social control mechanisms to kidnapers or attempted kidnapers? How effective are the institutional responses to abductions.

Features

► Analyzes kidnapping, including the threat of kidnapping ► Evaluates why and under what conditions governments, para-military and terrorist groups decide to abduct individuals and groups ► Assesses the extent to which social change modifies these cultural patterns

Dynamic Inequalities On Time Scales

This is a monograph devoted to recent research and results on dynamic inequalities on time scales. The study of dynamic inequalities on time scales has been covered extensively in the literature in recent years and has now become a major sub-field in pure and applied mathematics. In particular, this book will cover recent results on integral inequalities, including Young's inequality, Jensen's inequality, Holder's inequality, Minkowski's inequality, Steffensen's inequality, Hermite-Hadamard inequality and Čebyšev's inequality. Opial type inequalities on time scales and their extensions with weighted functions, Lyapunov type inequalities, Halanay type inequalities for dynamic equations on time scales, and Wirtinger type inequalities on time scales and their extensions will also be discussed here in detail.

Features

► Provides an analysis of a variety of important integral inequalities ► Using Halanay's inequalities and the properties of exponential function on time scales, this book establishes new conditions that lead to stability for nonlinear dynamic equations ► Develops a unified approach to handling multiple dynamic systems simultaneously using the recently-developed theory of dynamic systems on time scales

Creators of Mathematical and Computational Sciences

The book records the essential discoveries of mathematical and computational scientists in chronological order, following the birth of ideas on the basis of prior ideas ad infinitum. The authors document the winding path of mathematical scholarship throughout history, and most importantly, the thought process of each individual that resulted in the mastery of their subject. The book implicitly addresses the nature and character of every scientist as one tries to understand their visible actions in both adverse and congenial environments. The authors hope that this will enable the reader to understand their mode of thinking, and perhaps even to emulate their virtues in life.

Features

► A comprehensive biography on some of the seminal figures of mathematics and theoretical computer science from early to modern history ► Implicitly addresses the nature and character of each scientist to understand their visible actions in both adverse and congenial environment ► Documents the path of mathematical scholarship throughout history, and the thought process of each individual that resulted in the mastery of their subject

Stabilization of Elastic Systems by Collocated Feedback

By introducing a new stabilization methodology, this book characterizes the stability of a certain class of systems. The stability (exponential, polynomial, or weaker) for the closed loop problem is reduced to an observability estimate for the corresponding uncontrolled system combined with a boundedness property of the transfer function of the associated open loop system. A similar strategy is applied to systems where a delay term is added. The book concludes with many concrete examples. This book is addressed to graduate students in mathematics or engineering and also to researchers with an interest in stabilization and control systems governed by partial differential equations.

Features

► Describes a general methodology for stabilization problems ► Gives an introduction to systems with delay ► Two chapters are devoted to the study of numerous concrete examples

Linear Algebra Done Right

This best-selling textbook for a second course in linear algebra is aimed at undergrad math majors and graduate students. The novel approach taken here banishes determinants to the end of the book. The text focuses on the central goal of linear algebra: understanding the structure of linear operators on finite-dimensional vector spaces. The author has taken unusual care to motivate concepts and to simplify proofs. A variety of interesting exercises in each chapter helps students understand and manipulate the objects of linear algebra. The third edition contains major improvements and revisions throughout the book. More than 300 new exercises have been added since the previous edition. Many new examples have been added to illustrate the key ideas of linear algebra. New topics covered in the book include product spaces, quotient spaces, and dual spaces.

Features

► New edition extensively revised and updated
 ► Covers new topics such as product spaces, quotient spaces, and dual spaces
 ► Features new visually appealing format for both print and electronic versions
 ► Includes almost three times the amount of exercises as the previous edition

Introduction to the Representation Theory of Algebras

This book gives a general introduction to the theory of representations of algebras. It starts with examples of classification problems of matrices under linear transformations, explaining the three common setups: representation of quivers, modules over algebras and additive functors over certain categories. The main part is devoted to (i) module categories, presenting the unicity of the decomposition into indecomposable modules, the Auslander-Reiten theory and the technique of knitting; (ii) the use of combinatorial tools such as dimension vectors and integral quadratic forms; and (iii) deeper theorems such as Gabriel's Theorem, the trichotomy and the Theorem of Kac – all accompanied by further examples. Each section includes exercises to facilitate understanding.

Features

► A down-to-earth approach to the subject
 ► Introduces all established descriptions within the field
 ► Provides detailed and comprehensible proofs for all statements

An Invitation to General Algebra and Universal Constructions

Rich in examples and intuitive discussions, this book presents General Algebra using the unifying viewpoint of categories and functors. Starting with a survey, in non-category-theoretic terms, of many familiar and not-so-familiar constructions in algebra (plus two from topology for perspective), the reader is guided to an understanding and appreciation of the general concepts and tools unifying these constructions.

Features

► Reviews many concrete examples of universal constructions, motivating the development of general algebra and the category-theoretic view of universal constructions ► Enriches the reader's intuition of the abstract theory through many informal discussions ► Provides a large number of engaging exercises

Geometric Invariant Theory for Polarized Curves

We investigate GIT quotients of polarized curves. More specifically, we study the GIT problem for the Hilbert and Chow schemes of curves of degree d and genus g in a projective space of dimension $d-g$, as d decreases with respect to g .

Features

► An introduction to the techniques of Geometric Invariant Theory via a detailed analysis of the GIT problem for polarized curves ► An introduction to the problem of compactifying moduli spaces through an interpretation of the output of the GIT analysis ► An introduction to the rich theory of compactified Jacobians for singular curves via three explicit examples ► A detailed description of the quotient stacks associated to the different GIT quotients, illustrating the interplay between these two techniques

Meccanica Razionale

Il presente testo è concepito con l'obiettivo di venire incontro all'evoluzione subita dai corsi di Meccanica Razionale, sia in termini di organizzazione che di contenuti. I concetti fondamentali vengono così introdotti a partire da esempi e problemi concreti, anche comuni ad altre discipline, in vista di sinergie didattiche a volte favorite dalla presenza di corsi integrati. Questa impostazione è particolarmente marcata nelle sezioni tradizionalmente caratterizzate da una trattazione forse più astratta: dai vincoli al Principio dei lavori virtuali, dal Principio di d'Alembert alla Meccanica Analitica. Questa Seconda Edizione rinforza consistentemente il numero di esempi ed esercizi svolti.

Features

► Testo particolarmente mirato al corso di studi in Ingegneria ► Raccoglie e sviluppa la tradizione italiana in materia ► Evoluzione di un'opera, a cura degli stessi Autori - diffusa ed apprezzata a livello nazionale

Stability of Linear Delay Differential Equations

A Numerical Approach with MATLAB

This book presents the authors recent work on the numerical methods for the stability analysis of both equilibria and periodic solutions, which consist in applying pseudospectral techniques to discretize either the solution operator or the infinitesimal generator and in using the eigenvalues of the resulting matrices to approximate the exact spectra.

Features

► Provides Matlab codes allowing the interested reader to test and apply the proposed approaches in a practical perspective ► Represents a self-contained treatment of the problem, from the theoretical aspects of the models to the practical computation of the results ► Presents the authors recent work on the numerical methods for the stability analysis of equilibria and periodic solutions

Preparing for the Mathematical Olympiad

This book presents useful techniques for solving mathematical Olympiad problems in algebra and analysis. Most of the examples, exercises and problems in the book originate from the mathematical Olympiad contests around the world. The material is divided in ten chapters. The first four chapters are related to basic material that can be used in the first stages of any mathematical contests at high school level. The next four chapters comprise more advanced topics which are required for the international mathematical competitions and can be also useful for students in their first year of university.

Features

► First book on algebra or analysis explaining the theory and including the material used in the mathematical Olympiad ► Presents some interesting ways to tackle known problems ► Elementary treatment of complex numbers ► Key observations regarding the solution of functional equation problems

Contents

1. Preliminaries.- 2 Progressions and finite sums.- 3 Induction principle.- 4 Quadratic and cubic polynomials.- 5 Complex numbers.- 6 Functions and functional equations.- 7 Sequences and series.- 8 Polynomials.- 9 Problems.- 10 Solutions of the exercises and problems.- Notation.- Bibliography.- Index.

Analisi Matematica I

Teoria ed esercizi

Il presente testo intende essere di supporto ad un primo insegnamento di Matematica in quei corsi di studio (quali ad esempio Ingegneria, Informatica, Fisica) in cui lo strumento matematico parte significativa della formazione dell'allievo. Il testo presenta tre diversi livelli di lettura. Un livello essenziale permette allo studente di cogliere i concetti indispensabili della materia e di familiarizzarsi con le relative tecniche di calcolo. Un livello intermedio fornisce le giustificazioni dei principali risultati e arricchisce l'esposizione mediante utili osservazioni e complementi.

Features

► Il volume è un'opera di riferimento insostituibile per tutti gli studenti universitari di ingegneria, informatica e fisica che debbano sostenere l'esame di analisi ► La grafica accattivante, a 2 colori, fa di questo testo un punto di riferimento fondamentale per lo studio della disciplina ► Il testo intende essere di supporto ad un primo insegnamento di Analisi Matematica

Teoria ed esercizi

Il presente testo intende essere di supporto ad un secondo insegnamento di Analisi Matematica in quei corsi di studio (quali ad esempio Ingegneria, Informatica, Fisica) in cui lo strumento matematico parte significativa della formazione dell'allievo. I concetti e i metodi fondamentali del calcolo differenziale ed integrale in più variabili, le serie di funzioni e le equazioni differenziali ordinarie sono presentati con l'obiettivo primario di addestrare lo studente ad un loro uso operativo, ma critico. L'impostazione didattica dell'opera ricalca quella usata nel testo parallelo di Analisi Matematica I.

Features

► Il testo intende essere di supporto ad un secondo insegnamento di Analisi Matematica ► La modalità di presentazione degli argomenti permette un uso flessibile e modulare del testo, in modo da rispondere alle diverse possibili scelte didattiche nell'organizzazione di un corso di Analisi Matematica ► Numerosi esempi corredano e illustrano le definizioni e le proprietà di volta in volta enunciate ► Viene fornito un cospicuo numero di esercizi, tutti con la relativa soluzione

Elementary Symplectic Topology and Mechanics

This is a short tract on the essentials of differential and symplectic geometry together with a basic introduction to several applications of this rich framework: analytical mechanics, the calculus of variations, conjugate points & Morse index, and other physical topics. A central feature is the systematic utilization of Lagrangian submanifolds and their Maslov-Hörmander generating functions. Following this line of thought, first introduced by Włodzisław Tulczyjew, geometric solutions of Hamilton-Jacobi equations, Hamiltonian vector fields and canonical transformations are described by suitable Lagrangian submanifolds belonging to distinct well-defined symplectic structures. This unified point of view has been particularly fruitful in symplectic topology, which is the modern Hamiltonian environment for the calculus of variations, yielding sharp sufficient existence conditions. This line of investigation was initiated by Claude Viterbo in 1992; here, some primary consequences of this theory are exposed in Chapter 8: aspects of Poincaré's last geometric theorem and the Arnold conjecture are introduced.

Contents

Real Analysis on Intervals

The book targets undergraduate and postgraduate mathematics students and helps them develop a deep understanding of mathematical analysis. Designed as a first course in real analysis, it helps students learn how abstract mathematical analysis solves mathematical problems that relate to the real world. As well as providing a valuable source of inspiration for contemporary research in mathematics, the book helps students read, understand and construct mathematical proofs, develop their problem-solving abilities and comprehend the importance and frontiers of computer facilities and much more.

Features

► Presents theory, methods and basic algorithms of mathematical analysis of one real variable ► Offers short routes to many nowadays mathematical problems ► Makes the reader aware of the fine architecture of mathematics ► Outlines the usefulness of mathematical analysis in performing high precision computations

Integer Programming

This book is an elegant and rigorous presentation of integer programming, exposing the subject's mathematical depth and broad applicability. Special attention is given to the theory behind the algorithms used in state-of-the-art solvers. An abundance of concrete examples and exercises of both theoretical and real-world interest explore the wide range of applications and ramifications of the theory. Each chapter is accompanied by an expertly informed guide to the literature and special topics, rounding out the reader's understanding and serving as a gateway to deeper study. Key topics include: formulations polyhedral theory cutting planes decomposition enumeration semidefinite relaxations Written by renowned experts in integer programming and combinatorial optimization, Integer Programming is destined to become an essential text in the field.

Features

► Gives a concise yet in-depth treatment of the theory and practice of integer programming ► Provides ample motivation and concrete illustration of theoretical results ► Guides the reader to many special topics in the literature

Berkovich Spaces and Applications

We present an introduction to Berkovich's theory of non-archimedean analytic spaces that emphasizes its applications in various fields. The first part contains surveys of a foundational nature, including an introduction to Berkovich analytic spaces by M. Temkin, and to étale cohomology by A. Ducros, as well as a short note by C. Favre on the topology of some Berkovich spaces. The second part focuses on applications to geometry. A second text by A. Ducros contains a new proof of the fact that the higher direct images of a coherent sheaf under a proper map are coherent, and B. Rémy, A. Thuillier and A.

Features

► An accessible introduction to the rapidly growing theory of Berkovich analytic spaces ► Presents an original point of view, even on the basics of the theory ► Gives an exposition of the striking applications of Berkovich theory to group theory and dynamics

Contents

Introduction to Berkovich analytic spaces.- Étale cohomology of schemes and analytic spaces.- Countability properties of Berkovich spaces.- Cohomological finiteness of proper morphisms in algebraic geometry: a purely transcendental proof, without projective tools.- Bruhat-Tits buildings and analytic geometry.- Dynamics on Berkovich spaces in low dimensions.- Compactifications of spaces of representations (after Culler, Morgan and Shalen).

The Whole Truth About Whole Numbers

An Elementary Introduction to Number Theory

The Whole Truth About Whole Numbers is an introduction to the field of Number Theory for students in non-math and non-science majors who have studied at least two years of high school algebra. Rather than giving brief introductions to a wide variety of topics, this book provides an in-depth introduction to the field of Number Theory. The topics covered are many of those included in an introductory Number Theory course for mathematics majors, but the presentation is carefully tailored to meet the needs of elementary education, liberal arts, and other non-mathematical majors.

Features

► Introduction to Number Theory for non-math and non-science majors ► Very accessible to liberal arts students with many relevant proof-solving techniques and exercises ► Includes standard topics in a first Number Theory course as well as applications to identification numbers and cryptography

Contents

Introduction.- Conjectures, Proofs and Counterexamples.- Pythagorean Triples.- Prime Numbers.- The Division Algorithm and the Euclidean Algorithm.- Congruences.- Numerical Functions and Special Congruences.- Cryptography.

Lectures on Several Complex Variables

This monograph provides a concise, accessible snapshot of key topics in several complex variables, including the Cauchy Integral Formula, sequences of holomorphic functions, plurisubharmonic functions, the Dirichlet problem, and meromorphic functions. Based on a course given at Université de Montréal, this brief introduction covers areas of contemporary importance that are not mentioned in most treatments of the subject, such as modular forms, which are essential for Wiles' theorem and the unification of quantum theory and general relativity.

Features

► Provides a concise, accessible guide to several complex variables suitable for both advanced undergraduate and beginning graduate students ► Covers contemporary topics, such as modular forms and the Riemann manifold of a function, that are not covered in other books on several complex variables ► Many details are intentionally left out and many theorems are stated as problems, providing instructive exercises for students

Contents

Preface.- Introduction.- Basics.- Cauchy Integral Formula.- Sequences of Holomorphic Functions.- Series.- Zero Sets of Holomorphic Functions.- Holomorphic Mappings.- Plurisubharmonic Functions.- The Dirichlet Problem.- Uniform Approximation.- Complex Manifolds.- Examples of Manifolds.- Holomorphic Continuation.- The Tangent Space.- Meromorphic Functions and Subvarieties.

Stability of Neutral Functional Differential Equations

In this monograph the author presents explicit conditions for the exponential, absolute and input-to-state stabilities including solution estimates of certain types of functional differential equations. The main methodology used is based on a combination of recent norm estimates for matrix-valued functions, comprising the generalized Bohl-Perron principle, together with its integral version and the positivity of fundamental solutions. A significant part of the book is especially devoted to the solution of the generalized Aizerman problem.

Features

► Gives an approach based on estimates for matrix-valued functions which allows the investigation of various classes of equations from a unified viewpoint ► Provides the reader with a solution of the generalized Aizerman problem for NDEs ► Explains to the reader the generalized Bohl-Perron principle for neutral type systems and its integral version ► Gives explicit stability conditions for semilinear equations with linear neutral type parts and nonlinear causal mappings

Contents

Preliminaries.- Eigenvalues and Functions of Matrices.- Difference Equations with Continuous Time.- Linear Differential Delay Equations.- Linear Autonomous NDEs.- Linear Time-variant NDEs.- Nonlinear Vector NDEs.- Absolute Stability of Scalar NDEs.- Bounds for Characteristic Values of NDEs.

Gottlieb and Whitehead Center Groups of Spheres, Projective and Moore Spaces

This is a monograph that details the use of Siegel's method and the classical results of homotopy groups of spheres and Lie groups to determine some Gottlieb groups of projective spaces or to give the lower bounds of their orders. Making use of the properties of Whitehead products, the authors also determine some Whitehead center groups of projective spaces that are relevant and new within this monograph.

Features

► Presents a systematic study of Gottlieb Groups of Spheres ► Uses classical methods of homotopy theory and Lie groups to develop new theories on Gottlieb Projective Spaces ► Contains a number of nontrivial results in classical homotopy theory useful for people working not only in algebraic topology but in other areas of mathematics as well

Introduction to Stochastic Partial Differential Equations

The L_2 -theory of parabolic SPDEs is presented in this book. The development of the theory of SPDEs is motivated by problems arising in practice surrounding the numerical calculations of nonlinear filters for partially observed diffusion processes. To address these questions, the dependence of SPDEs on the driving semimartingales is investigated and new results on their numerical approximations are also given. In contrast to previous expositions, SPDEs driven by random measures and discontinuous semimartingales are also considered, and the theory of SPDEs driven by Levy processes are included as special cases. The author introduces a more general theory of SPDEs developing the theory of stochastic evolution equations in Banach spaces. He presents applications to large classes of linear and nonlinear SPDEs and, in particular, he develops a theory of SPDEs with unbounded coefficients in weighted Sobolev spaces. In this unique book regularity properties of the solutions are obtained via new results on dependence of the solutions on parameters, and existence and uniqueness theorems for parabolic SPDEs on smooth domains of \mathbb{R}^d are proven.

Features

► For the first time, SPDEs driven by random measures and discontinuous semimartingales are considered in this book ► More accessible for beginners, since the main existence and uniqueness results are obtained by elementary methods ► Exercises and applications are also given

Surveys in Differential-Algebraic Equations II

The present volume comprises survey articles on various fields of Differential-Algebraic Equations (DAEs), which have widespread applications in controlled dynamical systems, especially in mechanical and electrical engineering and a strong relation to (ordinary) differential equations.

Features

► A collection of survey articles, covering a broad spectrum of areas related to DAEs, each of which presented in an individual chapter ► Unique in the sense that other books provide rather an introduction to the principles of DAEs ► Suitable not only for graduate students for self-study but also for active researchers by dealing with specific aspects of particular fields of DAEs

Fixed Point Theory in Distance Spaces

This is a monograph on fixed point theory, covering the purely metric aspects of the theory—particularly results that do not depend on any algebraic structure of the underlying space. Traditionally, a large body of metric fixed point theory has been couched in a functional analytic framework. This aspect of the theory has been written about extensively.

Features

► Covers four classical fixed point theorems against which metric extensions are usually checked and several new modern theorems on fixed point theory and distances. ► Presents a concise accessible document which can be used as an introduction to the subject and its central themes, featuring material collected in a single volume for the first time. ► Introduces concepts addressing both mathematical and applied problems, including more formal concepts which have yet to find formal application.

Contents

Preface.- Part 1. Metric Spaces.- Introduction.- Caristi's Theorem and Extensions.- Nonexpansive Mappings and Zermelo's Theorem.- Hyperconvex metric spaces.- Ultrametric spaces.- Part 2. Length Spaces and Geodesic Spaces.- Busemann spaces and hyperbolic spaces.- Length spaces and local contractions.- The G-spaces of Busemann.- CAT(0) Spaces.- Ptolemaic Spaces.- R-trees (metric trees).- Part 3. Beyond Metric Spaces.- b-Metric Spaces.- Generalized Metric Spaces.- Partial Metric Spaces.- Diversities.- Bibliography.- Index.

The Mathematical Theory of Time-Harmonic Maxwell's Equations

Expansion-, Integral-, and Variational Methods

This book gives a concise introduction to the basic techniques needed for the theoretical analysis of the Maxwell Equations, and filters in an elegant way the essential parts, e.g., concerning the various function spaces needed to rigorously investigate the boundary integral equations and variational equations.

Features

► Written by well known international researchers based on their lectures between 2007 and 2013 ► Accessible to broad audience with examples and exercises throughout ► Topics are first approached with simpler scalar Helmholtz equations before turning to Maxwell equations ► Appendix material includes results from functional analysis, vector calculus, and differential geometry

Contents

Introduction.- Expansion into Wave Functions.- Scattering From a Perfect Conductor.- The Variational Approach to the Cavity Problem.- Boundary Integral Equation Methods for Lipschitz Domains.- Appendix.- References.- Index.

A Short Course in Ordinary Differential Equations

This text is a rigorous treatment of the basic qualitative theory of ordinary differential equations, at the beginning graduate level. Designed as a flexible one-semester course but offering enough material for two semesters, A Short Course covers core topics such as initial value problems, linear differential equations, Lyapunov stability, dynamical systems and the Poincaré—Bendixson theorem, and bifurcation theory, and second-order topics including oscillation theory, boundary value problems, and Sturm—Liouville problems.

Features

► Focuses on the theoretical aspect of ODEs without emphasis on lengthy technical applications of special equations from physics and engineering ► Uses carefully selected and organized material to cover all significant text with analytic, easily comprehensible explanations ► Simplifies and/or modifies many statements and proofs of theorems and introduces symbolic abbreviations for frequently used concepts and terms ► Gives hints for proof-oriented exercises and answers to computational exercises

Contents

Preface.- Notation and Abbreviations.- 1. Initial Value Problems.- 2. Linear Differential Equations.- 3. Lyapunov Stability Theory.- 4. Dynamic Systems and Planar Autonomous Equations.- 5. Introduction to Bifurcation Theory.- 6. Second-Order Linear Equations.- Answers and Hints.- Bibliography.- Index.

Fixed Point of the Parabolic Renormalization Operator

This monograph grew out of the authors' efforts to provide a natural geometric description for the class of maps invariant under parabolic renormalization and for the Inou-Shishikura fixed point itself as well as to carry out a computer-assisted study of the parabolic renormalization operator. It introduces a renormalization-invariant class of analytic maps with a maximal domain of analyticity and rigid covering properties and presents a numerical scheme for computing parabolic renormalization of a germ, which is used to compute the Inou-Shishikura renormalization fixed point. Inside, readers will find a detailed introduction into the theory of parabolic bifurcation, Fatou coordinates, Écalle-Voronin conjugacy invariants of parabolic germs, and the definition and basic properties of parabolic renormalization.

Features

► The first detailed introduction into one of the cutting-edge subjects of modern Complex Dynamics ► A new numerical approach to computing Fatou coordinates of a parabolic germ ► Text illustrated with many detailed computer-generated images

Contents

Dynamic Econometrics Models with SAS, Stata, and EViews

Dynamic Econometrics Models with SAS, Stata, and EViews covers a wide typology of dynamic econometrics models, including models with distributed delays, models with stochastic regressors, models with structural change, and dynamic panel data models. You'll discover core information and solutions around the theory of unit roots, co-integration, and error correction models. This book offers you from a practical, hands-on treatment of these models from multiple perspectives, so you'll find examples and solutions using SAS, Stat and EViews - the major solutions on the market to solve these non-trivial econometric tasks. You'll begin by learning about Dynamic Models such as those with delays in exogenous variables, and those with delays in the endogenous variable, and each of these simultaneously. Special types of Dynamic econometric models are also explored, including finite distributed delays, and infinite distributed delays. In particular, you'll work with EViews to explore these initial dynamic econometric models. Then stable econometric models are considered and those with structural change, including time constant parameters, and you'll examine the Chow prediction test, recursive models, and CUSUM and CUSUMQ tests. Once you've explored stable models, you'll learn more about unstable models, including spurious regressions, stationary time series, seasonality detection, and unit roots test, including the Dickey-Fuller Unit Roots Tests, and the Phillips-Perron Unit Roots Test. Error correction models (ECM), Unit roots and co-integration in seasonal series are explored with both EViews and Stata, following practical examples and exercises. In the final section of this book, panel data models are considered, with constant coefficients, and fixed effects.

MATLAB Optimization Techniques

MATLAB is a high-level language and environment for numerical computation, visualization, and programming. Using MATLAB, you can analyze data, develop algorithms, and create models and applications. The language, tools, and built-in math functions enable you to explore multiple approaches and reach a solution faster than with spreadsheets or traditional programming languages, such as C/C++ or Java. MATLAB Optimization Techniques introduces you to MATLAB and its Optimization Toolbox, which contains the current state of the art in optimization algorithms. The main algorithms for minimizing non-limited are the BFGS method quasi-Newton and direct research Nelder-Mead with linear research method. Quadratic programming (SQP) sequence variations are used for minimization with boundaries, achievement of objectives, and semi-infinite optimizations. Non-linear least-squares problems are solved using the methods of Gauss-Newton or Levenberg-Marquardt. With practical, hands-on examples, you'll learn about highly-optimized algorithms to solve linear programming problems, non-linear least square with limits, non-linear unconstrained minimization, non-linear minimization constrained limits, non-linear minimization with linear equalities, non-linear system solving equations, quadratic minimization with limits restrictions, quadratic minimization with linear equalities, and limits-constrained linear least squares. You'll also find optimized methods for formulations of quadratic programming and non-linear objectives, with linear equality constraints or limits restrictions.

Set Operads and Decomposition Theory

In Computer Science and Combinatorics

This monograph has two main objectives. The first one is to give a self-contained exposition of the relevant facts about set operads, in the context of combinatorial species and its operations. This approach has various advantages: one of them is that the definition of combinatorial operations on species, product, sum, substitution and derivative, are simple and natural. They were designed as the set theoretical counterparts of the homonym operations on exponential generating functions, giving an immediate insight on the combinatorial meaning of them. The second objective is more ambitious. Before formulating it, authors present a brief historic account on the sources of decomposition theory.

Features

► Gives a detailed elementary introduction to set operads from the point of view of species, the advantages of this approach are explained in the abstract ► Settles decomposition theory in to the area of domain of a very general and powerful machinery: set operads and operads in general ► Would be of the interest to computer scientists as well as to the operadic community

Historical Developments in Singular Perturbations

This engaging text describes the development of singular perturbations, including its history, accumulating literature, and its current status. While the approach of the text is sophisticated, the literature is accessible to a broad audience. A particularly valuable bonus are the historical remarks. These remarks are found throughout the manuscript. They demonstrate the growth of mathematical thinking on this topic by engineers and mathematicians. The book focuses on detailing how the various methods are to be applied. These are illustrated by a number and variety of examples. Readers are expected to have a working knowledge of elementary ordinary differential equations, including some familiarity with power series techniques, and of some advanced calculus. Dr. O'Malley has written a number of books on singular perturbations.

Features

► Overview of 100 year history and development of singular perturbations ► Written by top international researchers ► Gives key research developments in singular perturbations ► Contains many examples and applications

Smooth Manifolds

This book offers an introduction to the theory of smooth manifolds, helping students to familiarize themselves with the tools they will need for mathematical research on smooth manifolds and differential geometry. The book primarily focuses on topics concerning differential manifolds, tangent spaces, multivariable differential calculus, topological properties of smooth manifolds, embedded submanifolds, Sard's theorem and Whitney embedding theorem. It is clearly structured, amply illustrated and includes solved examples for all concepts discussed. Several difficult theorems have been broken into many lemmas and notes (equivalent to sub-lemmas) to enhance the readability of the book. Further, once a concept has been introduced, it reoccurs throughout the book to ensure comprehension. Rank theorem, a vital aspect of smooth manifolds theory, occurs in many manifestations, including rank theorem for Euclidean space and global rank theorem.

Features

► Presents detailed proofs of important theorems ► Supplies solved examples for each concept discussed ► Discusses all major topics on smooth manifolds ► Proves Sard's theorem, for the first time, in case $n = 1$ ► Will be useful for graduate students as well as researchers

Contents

Chapter 1. Differentiable Manifolds.- Chapter 2. Tangent Spaces.- Chapter 3. Multivariable Differential Calculus.- Chapter 4. Topological Properties of Smooth Manifolds.- Chapter 5. Linear Models in Matrix Form

A Hands-On Approach for the Behavioral Sciences

This textbook is an approachable introduction to statistical analysis using matrix algebra. Prior knowledge of matrix algebra is not necessary. Advanced topics are easy to follow through analyses that were performed on an open-source spreadsheet using a few built-in functions. These topics include ordinary linear regression, as well as maximum likelihood estimation, matrix decompositions, nonparametric smoothers and penalized cubic splines. Data sets contain a purposefully limited number of observations so as not to overwhelm readers and encourage them to do the calculations themselves.

Features

► Comprehensively covers use of linear models in matrix form ► Utilizes R and open source spreadsheets as standard tools for algebraic calculations ► Many examples and full-color screenshots data files to help readers work through the exercises ► East chapter contains useful summary and R code

Contents

Matrix Properties and Operations.- Simple Linear Regression.- Maximum Likelihood Estimation.- Multiple Regression.- Matrix Decompositions.- Problematic Observations.- Errors and Residuals.- Linearizing Transformations and Nonparametric Smoothers.- Cross-Product Terms and Interactions.- Polynomial Regression.- Categorical Predictors.- Factorial Designs.- Analysis of Covariance.- Moderation.- Mediation.

Statistical Analysis and Data Display

An Intermediate Course with Examples in R

This contemporary presentation of statistical methods features extensive use of graphical displays for exploring data and for displaying the analysis. The authors demonstrate how to analyze data—showing code, graphics, and accompanying computer listings—for all the methods they cover.

Features

► New edition features color throughout, reworking of the material to emphasize R (but also utilize SAS), and new material ► New chapters include Ch. 19 on Likert Scale Data to pick up on the importance of rating scales in fields from population studies to psychometrics and Ch. 20 on Medical, Pharmaceutical and Social Science Examples ► Unique features: chapters introducing the statistics and probability methods used, R package-specific appendices, exercises, code for the graphics used throughout the book, and the ability for readers to also use SAS code

Longitudinal Categorical Data Analysis

This is the first book in longitudinal categorical data analysis with parametric correlation models developed based on dynamic relationships among repeated categorical responses. This book is a natural generalization of the longitudinal binary data analysis to the multinomial data setup with more than two categories. Thus, unlike the existing books on cross-sectional categorical data analysis using log linear models, this book uses multinomial probability models both in cross-sectional and longitudinal setups.

Features

► Provides a comprehensive approach to analysing longitudinal data, with real life examples from the social sciences and medicine ► Covers univariate, bi-variate, and multivariate models for categorical analysis of longitudinal data ► Primary audience is researchers and graduate students in statistics and social sciences or applied statistics research areas, but chapters 1-3 could also be used in advanced undergraduate courses

Contents

Introduction.- Overview of Regression Models for Cross-sectional Univariate Categorical Data.- Regression Models for Univariate Longitudinal Stationary Categorical Data.- Regression Models for Univariate Longitudinal Non-stationary Categorical Data.- Multinomial Models for Cross-sectional Bivariate Categorical Data.- Multinomial Models for Longitudinal Bivariate Categorical Data.- Index.

Biostatistics and Epidemiology

A Primer for Health and Biomedical Professionals

Since the publication of the first edition, Biostatistics and Epidemiology has attracted loyal readers from across specialty areas in the biomedical community. Not only does this textbook teach foundations of epidemiological design and statistical methods, but it also includes topics applicable to new areas of research.

Features

► Updated edition of a classic text that has brought biostatistics and epidemiology to a broad audience in a very accessible way ► Easily understandable by readers with a non-mathematical background ► Covers the design, analysis and interpretation of observational studies, randomized trials and even genetic research ► Includes topics not usually found in introductory text books, such as propensity analysis, quality of life measures, genome wide association studies, evaluation of new biomarkers

Contents

The Scientific Method.- Probability.- Statistics.- Epidemiology.- Screening.- Clinical Trials.- Quality of Life.- Genetic Epidemiology.- Risk Prediction and Reclassification.- Research Ethics and Statistics.- Postscript.- Appendix A.- Appendix B.- Appendix C.- Appendix D.- Appendix E.- Appendix F.- References.- Suggested Readings.- Index.

Natural and Artificial Reasoning

An Exploration of Modelling Human Thinking

What are the limitations of computer models and why do we still not have working models of people that are recognizably human? This is the principle puzzle explored in this book where ideas behind systems that behave intelligently are described and different philosophical issues are touched upon. The key to human behavior is taken to be intelligence and the ability to reason about the world. A strong scientific approach is taken, but first it was required to understand what a scientific approach could mean in the context of both natural and artificial systems. A theory of intelligence is proposed that can be tested and developed in the light of experimental results. The book illustrates that intelligence is much more than just behavior confined to a unique person or a single computer program within a fixed time frame.

Features

► Unique presentation of a range of approaches to the study of intelligent systems ► Enriches the understanding of the fundamentals of artificial intelligence ► The visual functional programming environment used in the book enables readers to easily follow the concepts explored

Computational Counterpoint Worlds

Mathematical Theory, Software, and Experiments

This first book on this topic is a comprehensive reference on the state of the art. The topics addressed include counterpoint, the first-species model, quasipolarities and interval dichotomies, graphs and transformations, and hypergesture homology. The theory presented also develops counterpoint models for new consonance-dissonance dichotomies. The book is suitable for graduate courses, the authors have a supporting Java implementation available online.

Features

► First book on the computational theory of counterpoint ► Supporting Java implementation available ► Theory develops counterpoint models for new consonance-dissonance dichotomies

Continuous Software Engineering

This book provides essential insights on the adoption of modern software engineering practices at large companies producing software-intensive systems, where hundreds or even thousands of engineers collaborate to deliver on new systems and new versions of already deployed ones. It is based on the findings collected and lessons learned at the Software Center (SC), a unique collaboration between research and industry, with Chalmers University of Technology, Gothenburg University and Malmö University as academic partners and Ericsson, AB Volvo, Volvo Car Corporation, Saab Electronic Defense Systems, Grundfos, Axis Communications, Jeppesen (Boeing) and Sony Mobile as industrial partners. The 17 chapters present the "Stairway to Heaven" model, which represents the typical evolution path companies move through as they develop and mature their software engineering capabilities. The chapters describe theoretical frameworks, conceptual models and, most importantly, the industrial experiences gained by the partner companies in applying novel software engineering techniques.

Programming Smalltalk Object-Orientation from the Beginning

An introduction to the principles of programming

A straightforward, step-by-step introduction to clear and elegant object-oriented programming. Using a language perfect for this kind of programming, the book has been tested in numerous courses and workshops over ten years. "Programming Smalltalk" is particularly suited for readers with no prior programming knowledge. Starting from the first principles of programming, it teaches you how to use and create algorithms (reusable rules for problem-solving) and the basic building blocks of software. It goes on to explain how to develop complete applications and has a whole chapter on web applications as well as case studies. Now translated into English, this edition was completely revised to be consistent with the latest version of Cincom® VisualWorks®, a professional Smalltalk environment. All examples were created using VisualWorks which is available without cost for educational purposes and can be downloaded and installed on any up-to-date computer.

Features

► Easily grasp programming principles and put them into practice immediately ► Plain step-by-step introduction ► Clear guide to object-oriented programming

Computational Musicology in Hindustani Music

The book opens with a short introduction to Indian music, in particular classical Hindustani music, followed by a chapter on the role of statistics in computational musicology. The authors then show how to analyze musical structure using Rubato, the music software package for statistical analysis, in particular addressing modeling, melodic similarity and lengths, and entropy analysis; they then show how to analyze musical performance. Finally, they explain how the concept of seminatural composition can help a music composer to obtain the opening line of a raga-based song using Monte Carlo simulation.

Features

► First book dedicated to this topic ► Authors are accomplished musicians and musicologists ► Offers unique insights on both structure and performance of Hindustani music

Driver Drowsiness Detection

Systems and Solutions

This SpringerBrief presents the fundamentals of driver drowsiness detection systems, provides examples of existing products, and offers guides for practitioners interested in developing their own solutions to the problem. Driver drowsiness causes approximately 7% of all road accidents and up to 18% of fatal collisions. Proactive systems that are capable of preventing the loss of lives combine techniques, methods, and algorithms from many fields of engineering and computer science such as sensor design, image processing, computer vision, mobile application development, and machine learning which is covered in this brief. The major concepts addressed in this brief are: the need for such systems, the different methods by which drowsiness can be detected (and the associated terminology), existing commercial solutions, selected algorithms and research directions, and a collection of examples and case studies. These topics equip the reader to understand this critical field and its applications. Detection Systems and Solutions: Driver Drowsiness is an invaluable resource for researchers and professionals working in intelligent vehicle systems and technologies. Advanced-level students studying computer science and electrical engineering will also find the content helpful.

Morphological Modeling of Terrains and Volume Data

This book describes the mathematical background behind discrete approaches to morphological analysis of scalar fields, with a focus on Morse theory and on the discrete theories due to Banchoff and Forman. The algorithms and data structures presented are used for terrain modeling and analysis, molecular shape analysis, and for analysis or visualization of sensor and simulation 3D data sets. It covers a variety of application domains including geography, geology, environmental sciences, medicine and biology. The authors classify the different approaches to morphological analysis which are all based on the construction of Morse or Morse-Smale decompositions. They describe algorithms for computing such decompositions for both 2D and 3D scalar fields, including those based on the discrete watershed transform. Also addressed are recent developments in the research on morphological shape analysis, such as simplification operators for Morse and Morse-Smale complexes and their multi-resolution representation.

Introduction to Evolutionary Computing

The overall structure of this new edition is three-tier: Part I presents the basics, Part II discusses advanced topics, and Part III is concerned with methodological issues. In the second edition the authors have reorganized the material to focus on problems, how to represent them, and then how to choose design algorithms for different representations.

Features

▶ New edition of well-established undergraduate textbook revised to offer an integrated view on evolution-based problem-solving algorithms ▶ Suitable for self-study by practitioners and researchers ▶ Combines chapters on parameter tuning and control with "how-to" chapters in a new book part dedicated to methodology

Contents

Trustworthy Reconfigurable Systems

Enhancing the Security Capabilities of Reconfigurable Hardware Architectures

Thomas Feller sheds some light on trust anchor architectures for trustworthy reconfigurable systems. He is presenting novel concepts enhancing the security capabilities of reconfigurable hardware. Almost invisible to the user, many computer systems are embedded into everyday artifacts, such as cars, ATMs, and pacemakers. The significant growth of this market segment within the recent years enforced a rethinking with respect to the security properties and the trustworthiness of these systems. The trustworthiness of a system in general equates to the integrity of its system components. Hardware-based trust anchors provide measures to compare the system configuration to reference measurements. Reconfigurable architectures represent a special case in this regard, as in addition to the software implementation, the underlying hardware architecture may be exchanged, even during runtime.

Channel Estimation for Physical Layer Network Coding Systems

This SpringerBrief presents channel estimation strategies for the physical layer network coding (PLNC) systems. Along with a review of PLNC architectures, this brief examines new challenges brought by the special structure of bi-directional two-hop transmissions that are different from the traditional point-to-point systems and unidirectional relay systems. The authors discuss the channel estimation strategies over typical fading scenarios, including frequency flat fading, frequency selective fading and time selective fading, as well as future research directions. Chapters explore the performance of the channel estimation strategy and optimal structure of training sequences for each scenario. Besides the analysis of channel estimation strategies, the book also points out the necessity of revisiting other signal processing issues for the PLNC system. Channel Estimation of Physical Layer Network Coding Systems is a valuable resource for researchers and professionals working in wireless communications and networks. Advanced-level students studying computer science and electrical engineering will also find the content helpful.

Wireless Next Generation Networks

A Virtue-Based Trust Model

This SpringerBrief proposes a trust model motivated by virtue epistemology, addressing the need for a more efficient and flexible trust model for wireless next generation networks. This theory of trust simplifies the computation and communication overhead of strictly cognitive-computational models of trust. Both the advantages and the challenges of virtue-based trust models are discussed. This brief offers new research and a general theory of rationality that enables users to interpret trust and reason as complementary mechanisms that guide our rational conduct at two different epistemic levels. The presented model of human social interaction is designed for the highly dynamic and unstructured environment of the mobile Internet and wireless next generation networks. Wireless Next Generation Networks: A Virtue-Based Trust Model targets network engineers, cognitive scientists, AI researchers, philosophers, and social scientists. Advanced-level students studying computer science, electrical engineering and social science will also find the interdisciplinary perspective useful.

Contents

Introduction: Motivations for a New Trust Model.- Wireless Threats and Key Management Issues.- Trust, Epistemic Normativity, and Rationality.- Challenges to Virtue Perspectivism.- Other Theories of Trust and Trust Models.- A Normative Virtue-Based Trust Model.- Conclusion: Modeling Human Social Interaction.

Feature Coding for Image Representation and Recognition

This brief presents a comprehensive introduction to feature coding, which serves as a key module for the typical object recognition pipeline.

Features

► Overviews all the aspects of feature coding, from motivation, mathematical representation to applications in practice ► Review the state-of-the-art and explore the evolvement of various algorithms ► Categorize the existing typical feature coding algorithms and summarize the characteristics ► Provide the suggestions of employing feature coding in practice and forecast potential directions of this area ► Supplies supplementary materials such as source codes of the algorithm framework and all related feature coding algorithms at the associated website, <http://www.openpr.org.cn/index.php/All/92-Evaluation-toolkit/View-details.html>

Science Gateways for Distributed Computing Infrastructures

Development Framework and Exploitation by Scientific User Communities

The book describes the science gateway building technology developed in the SCI-BUS European project and its adoption and customization method, by which user communities, such as biologists, chemists, and astrophysicists, can build customized, domain-specific science gateways. Many aspects of the core technology are explained in detail, including its workflow capability, job submission mechanism to various grids and clouds, and its data transfer mechanisms among several distributed infrastructures. The book will be useful for scientific researchers and IT professionals engaged in the development of science gateways.

Features

► Shows users how to build customized, domain-specific science gateways ► Authors drawn from diverse fields, including biology, chemistry, and astrophysics ► Useful for computational scientists engaged in the design of distributed data management infrastructures

Deformable Meshes for Medical Image Segmentation

Accurate Automatic Segmentation of Anatomical Structures

Segmentation of anatomical structures in medical image data is an essential task in clinical practice. Dagmar Kainmueller introduces methods for accurate fully automatic segmentation of anatomical structures in 3D medical image data. The author's core methodological contribution is a novel deformation model that overcomes limitations of state-of-the-art Deformable Surface approaches, hence allowing for accurate segmentation of tip- and ridge-shaped features of anatomical structures. As for practical contributions, she proposes application-specific segmentation pipelines for a range of anatomical structures, together with thorough evaluations of segmentation accuracy on clinical image data. As compared to related work, these fully automatic pipelines allow for highly accurate segmentation of benchmark image data.

Ubiquitous Music

This is the first monograph dedicated to this interdisciplinary research area, combining the views of music, computer science, education, creativity studies, psychology, and engineering. The contributions include introductions to ubimus research, featuring theory, applications, and technological development, and descriptions of permanent community initiatives such as virtual forums, multi-institutional research projects, and collaborative publications. The book will be of value to researchers and educators in all domains engaged with creativity and computing.

Features

► First book dedicated to this topic ► Adopts a socially grounded view of creative practice ► Explains both cutting-edge art and theoretical knowledge

Contents

Ubiquitous Music: A Manifesto.- Ubimus Through the Lens of Creativity Theories.- Methods in Creativity-Centered Design for Ubiquitous Musical Activities.- Repertoire Remix in the Context of Festival City.- Making Meaningful Musical Experiences Accessible Using the iPad.- Analogue Audio Recording Using Remote Servers.- Development Tools for Ubiquitous Music on the World-Wide Web.- Ubiquitous Music Ecosystems: Faust Programs in Csound.- Index.

Cyber Defense and Situational Awareness

This book is the first publication to give a comprehensive, structured treatment to the important topic of situational awareness in cyber defense. It presents the subject in a logical, consistent, continuous discourse, covering key topics such as formation of cyber situational awareness, visualization and human factors, automated learning and inference, use of ontologies and metrics, predicting and assessing impact of cyber attacks, and achieving resilience of cyber and physical mission.

Features

► Provides comprehensive, structured treatment of the subject in a logical, consistent, continuous discourse, covering all key topics relevant to the field ► Supplies easy-to-read introductions, summaries, practical observations and case studies in each chapter ► Brings together prominent authors with extensive academic research experiences as well as practitioners responsible for day-to-day defense of computer networks against highly sophisticated attackers

Process Design for Natural Scientists

An Agile Model-Driven Approach

This book presents an agile and model-driven approach to manage scientific workflows. The approach is based on the Extreme Model Driven Design (XMDD) paradigm and aims at simplifying and automating the complex data analysis processes carried out by scientists in their day-to-day work. Besides documenting the impact the workflow modeling might have on the work of natural scientists, this book serves three major purposes: 1. It acts as a primer for practitioners who are interested to learn how to think in terms of services and workflows when facing domain-specific scientific processes. 2. It provides interesting material for readers already familiar with this kind of tools, because it introduces systematically both the technologies used in each case study and the basic concepts behind them.

Features

► Serves as a primer for the field of scientific workflows ► Includes an extensive number of applications and case studies in bioinformatics and geovisualization domains ► Addresses the current topics related to big data and reproducible science ► Can be used as a text book for students in experimental sciences

Contents

Algorithmic Game Theory

7th International Symposium, SAGT 2014, Haifa, Israel, September 30 -- October 2, 2014, Proceedings

This book constitutes the refereed proceedings of the 7th International Symposium on Algorithmic Game Theory, SAGT 2014, held in Haifa, Israel, in October 2014. The 24 full papers and 5 short papers presented were carefully reviewed and selected from 65 submissions. They cover various important aspects of algorithmic game theory, such as matching theory, game dynamics, games of coordination, networks and social choice, markets and auctions, price of anarchy, computational aspects of games, mechanism design and auctions.

Mathematical Logic

Foundations for Information Science

Mathematical logic is a branch of mathematics that takes axiom systems and mathematical proofs as its objects of study. This book shows how it can also provide a foundation for the development of information science and technology.

Features

► Research monograph of textbook style with well-structured presentation and formal proofs for all theoretical results, illustrated by concrete examples ► New ideas and methodologies from information science and technology are used to annotate the concepts and theorems of mathematical logic, providing a new angle of view for readers from mathematics and a friendly environment for readers from information science to understand the quintessence of mathematical logic ► The author's original work on version sequences, revision calculus, and language environments is coherently integrated into the book, enriching the content and the scope of application of mathematical logic

Contents

Preface.- Preface to the Second Edition.- I Elements of Mathematical Logic.- 1 Syntax of First-Order Languages.- 2 Models of First-Order Languages.- 3 Formal Inference Systems.- 4 Computability & Representability.- 5 Gödel Theorems.- II Logical Framework of Scientific Discovery.- 6 Sequences of Formal Theories.- 7 Revision Calculus.- 8 Version Sequences.- 9 Inductive Inference.- 10 Meta-Language Environments.- Appendix 1 Sets and Maps.- Appendix 2 Proof of the Representability Theorem.- Bibliography.- Index.

Instance-Specific Algorithm Configuration

This book presents a modular and expandable technique in the rapidly emerging research area of automatic configuration and selection of the best algorithm for the instance at hand. The author presents the basic model behind ISAC and then details a number of modifications and practical applications. In particular, he addresses automated feature generation, offline algorithm configuration for portfolio generation, algorithm selection, adaptive solvers, online tuning, and parallelization. The author's related thesis was honorably mentioned (runner-up) for the ACP Dissertation Award in 2014, and this book includes some expanded sections and notes on recent developments.

Features

► Author presents the basic model and also details practical applications ► Interesting for researchers and practitioners in machine learning and constraint programming ► Technique presented is modular and expandable

Contents

IT Quality Management

In a comprehensive approach this book covers the end-to-end Process from request management to change management, error management and migration management to acceptance testing and final data clean up. It is based upon nearly twenty years of experience in tests, acceptance and certification, when introducing medium to large IT systems including complex software for administrations and industry in many countries. There exist a variety of methodologies with different characteristics having emanated from various schools and consultancies to support such activities. However, it is obvious that because of the diversity in organisational levels in companies the rigor of application of such methodologies quite often suffers with regard to more pragmatic approaches. In view of economic considerations this may be unavoidable.

Features

► Includes tips on how to implement successfully large IT systems ► Approach oriented on practical criteria ► Covers cover end-to-end process from request to acceptance

Authentication in Insecure Environments

Using Visual Cryptography and Non-Transferable Credentials in Practise

Sebastian Pape discusses two different scenarios for authentication. On the one hand, users cannot trust their devices and nevertheless want to be able to do secure authentication. On the other hand, users may not want to be tracked while their service provider does not want them to share their credentials. Many users may not be able to determine whether their device is trustworthy, i.e. it might contain malware. One solution is to use visual cryptography for authentication. The author generalizes this concept to human decipherable encryption schemes and establishes a relationship to CAPTCHAS. He proposes a new security model and presents the first visual encryption scheme which makes use of noise to complicate the adversary's task.

Feature

Emergent Interfaces for Feature Modularization

Developers frequently introduce errors into software systems when they fail to recognise module dependencies. Using forty-three software families and Software Product Lines (SPLs), where the majority are commonly used in industrial practice, the authors reports on the feature modularization problem and provides a study of how often it may occur in practice. To solve the problem they present the concept of emergent feature modularization which aims to establish contracts between features to prevent developers from breaking other features when performing a maintenance task.

Features

► Discusses the feature modularization problem and presents a study on how frequently it may occur in practice ► Introduces the concept of Emergent Interfaces to improve feature modularization ► Provides a prototype tool "Emergo" to support developers with Emergent Interfaces ► Presents an empirical study using proxy metrics to evaluate the potential of Emergent Interfaces to reduce maintenance effort

Haptic Rendering for Simulation of Fine Manipulation

This book introduces the latest progress in six degrees of freedom (6-DoF) haptic rendering with the focus on a new approach for simulating force/torque feedback in performing tasks that require dexterous manipulation skills. One of the major challenges in 6-DoF haptic rendering is to resolve the conflict between high speed and high fidelity requirements, especially in simulating a tool interacting with both rigid and deformable objects in a narrow space and with fine features. The book presents a configuration-based optimization approach to tackle this challenge. Addressing a key issue in many VR-based simulation systems, the book will be of particular interest to researchers and professionals in the areas of surgical simulation, rehabilitation, virtual assembly, and inspection and maintenance.

Features

► Introduces novel algorithms for 6-DoF haptic rendering of both rigid and deformable objects in complex interaction ► Targets simulation of fine manipulation ► Applies haptic rendering to dental simulation ► Addresses evaluation of 6-DoF haptic rendering methods ► Provides internet support with downloadable demos and codes

Social Media

Fundamentals, Models, and Ranking of User-Generated Content

The increasing amount of user-generated content available on social media platforms requires new methods to find, evaluate, and to compare. To this day, existing ranking approaches to user-generated content do not allow for evaluation across platforms by exploiting its metadata. User-generated content, such as blog postings, forum discussions, shared videos etc. does however contain information that can be used for its evaluation independent of specific search interests. Claudia Wyrwoll presents a query- and language-independent ranking approach that allows for global evaluation of user-generated content across different platforms. Building on an insightful introduction into social media fundamentals, she proposes new models describing phenomena associated with social media, laying the foundation for further research and development.

Privacy in a Digital, Networked World

Technologies, Implications and Solutions

Various parties are increasingly interested in collecting information about users and their activities in many facets of life. Some wish to provide customized services and applications to better meet the needs of end-users. Others argue that the collected information helps them to improve security. Yet often the means by which such information is collected does not give much consideration to the privacy of individuals.

Features

► A single, comprehensive text suitable for teaching courses on privacy ► Interdisciplinary in scope, touching on such areas as cloud computing, social networking, law, healthcare, smart grids, and big data ► Examines in detail cutting-edge technologies, discusses current challenges, and presents illuminating perspectives on privacy

Contents

Fundamental Concepts of Privacy.- Web Privacy.- Location Privacy.- Economics of Privacy.- Privacy in Healthcare.- Information Utility and Privacy.- Privacy in Cloud Computing.- Privacy in Databases.- Privacy in Social Networks.- Privacy in Electronic Communications.- Usability of Privacy Features.- Privacy: Law and Ethics.- Privacy in Smart Grid.- Privacy in Vehicular Ad Hoc Networks.- Privacy in Peer-to-Peer Networks.- Privacy Design and Model.- Privacy Tools.- Case Studies of Privacy Features.- Case Studies of Privacy Technologies.

Calculations on nonlinear optical properties for large systems

The elongation method

For design purposes one needs to relate the structure of proposed materials to their NLO (nonlinear optical) and other properties, which is a situation where theoretical approaches can be very helpful in providing suggestions for candidate systems that subsequently can be synthesized and studied experimentally. This brief describes the quantum-mechanical treatment of the response to one or more external oscillating electric fields for molecular and macroscopic, crystalline systems. To calculate NLO properties of large systems, a linear scaling generalized elongation method for the efficient and accurate calculation is introduced.

Features

► Written by a leading academic ► Theory is applied to biological and nano systems ► Includes details on how to implement the technique

Citric Acid

This monograph is devoted to different aspects associated with citric acid, inorganic citrates and their aqueous and organic solutions. It includes information about properties, occurrence and technological applications of citric acid and inorganic citrates. Phase equilibria - melting, freezing, boiling, vapour pressures, solubilities of citric acid in water, organic solvents and ternary systems are presented, correlated, and analyzed. Dynamic properties - viscosities, diffusion coefficients, electrical conductivities and surface tensions are examined. Mathematical representations of citric acid dissociation, in electrolyte solutions and in buffers are discussed. Citric acid chemistry - syntheses of citric acid, neutralization, degradation, oxidation, esterification, formation of anhydrides, amides and citrate-based siderophores is reviewed.

Features

► No other book features included material ► Contains interdisciplinary material ► Includes numerous tables and correlations of examined and analyzed physicochemical data ► Illustrated with several colour figures

Contents

Preface.- Chapter.- Introduction.- Properties of Citric Acid and its Solutions.- Dissociation Equilibria in Solutions with Citrate Ions.- Citric Acid Chemistry.- Physicochemical Properties of Inorganic Citrates.- References.

The Influence of Chemistry on New Foods and Traditional Products

This Brief concerns the influence of chemistry in the modern food and beverages industry. The world of traditional foods has been soundlessly but increasingly interconnected with the chemical industry in the last century. Different areas are considered in a multidisciplinary approach: - the production of chemical additives and of non-food components needed in the food industry (e.g.

Modelling Electroanalytical Experiments by the Integral Equation Method

This comprehensive presentation of the integral equation method as applied to electro-analytical experiments is suitable for electrochemists, mathematicians and industrial chemists. The discussion focuses on how integral equations can be derived for various kinds of electro-analytical models. The book begins with models independent of spatial coordinates, goes on to address models in one dimensional space geometry and ends with models dependent on two spatial coordinates.

Features

► A well-organised presentation suitable for electrochemists, mathematicians and industrial chemists ► Thorough literature overview included ► Interdisciplinary through coverage of electrochemical, mathematical and computational examples

Contents

Introduction.- Basic Assumptions and Equations of Electroanalytical Models.- Mathematical Preliminaries.- Models Independent of Spatial Coordinates.- Models Involving One-Dimensional Diffusion.- Models Involving One-Dimensional Convection-Diffusion.- Models Involving Two- and Three-Dimensional Diffusion.- Models Involving Transport Coupled with Homogeneous Reactions.- Models Involving Disturbed and Localised Species.- Models Involving Additional Complications.- Analytical Solution Methods.- Numerical Solution Methods.- Appendices.

Optical Spectra of Phthalocyanines and Related Compounds

A Guide for Beginners

This book reviews the optical spectra of phthalocyanines and related compounds. The book also provides a theoretical background to distinguish their spectra from those of porphyrins as graphically as possible and without mathematicization. Phthalocyanines are tricky because their spectra behave like the sea-god Proteus: depending on conditions they sometimes can be very misleading.

Features

► Makes maximum use of figures and schemes and a minimum of verbal explanations ► Provides important information which is not described in academic papers ► Avoids mathematicization to the utmost possible in giving theoretical backgrounds and explanations

Contents

Introduction.- How Do We See a Color? What Are Dyes.- How Useful Are Phthalocyanines.- "Standard" Optical Absorption Spectra of Phthalocyanines and the Theoretical Background.- Normal Absorption Spectra of Phthalocyanines.- Models of Molecular Orbitals of Phthalocyanines.- Actual Absorption Spectra Observed in the Laboratory.- Effects of Metal and Peripheral Substituents.- Protonation.- Aggregation.- Oxidation and Reduction.- Optical Emission Spectra.- Fluorescence and Phosphorescence.- Mirror Image, Stokes Shift.- Effects of Impurity.- Effects of Aggregation.- Conclusion: Notes for Beginners

Carbon Fibers

This book contains eight chapters that discuss the manufacturing methods, surface treatment, composite interfaces, microstructure-property relationships with underlying fundamental physical and mechanical principles, and applications of carbon fibers and their composites. Recently, carbon-based materials have received much attention for their many potential applications. The carbon fibers are very strong, stiff, and lightweight, enabling the carbon materials to deliver improved performance in several applications such as aerospace, sports, automotive, wind energy, oil and gas, infrastructure, defense, and semiconductors. However, the use of carbon fibers in cost-sensitive, high-volume industrial applications is limited because of their relatively high costs.

Features

► Introduces the field of carbon fibers and composites, including technological and commercial applications ► Provides an insightful review to all the key techniques in the manufacturing and modification ► Of interest to the beginner as well as the senior researcher in material engineering, practicing process design, and chemical engineering

Contents

1 History and Structure of Carbon Fibers.- 2 Precursors and Manufacturing of Carbon Fibers.- 3 Matrices for Carbon Fiber Composites.- 4 Surface Treatment and Sizing of Carbon Fibers.- 5 Testing of Carbon Fibers and Their Composites.- 6 Manufacture of Carbon Fiber Composites.- 7 Recent Uses of Carbon Fibers.- 8 Carbon Fibers and their Composites.

Electrochemistry of Immobilized Particles and Droplets

Experiments with Three-Phase Electrodes

This second edition of a successful and highly-accessed monograph has been extended by more than 100 pages. It includes an enlarged coverage of applications for materials characterization and analysis. Also a more detailed description of strategies for determining free energies of ion transfer between miscible liquids is provided. This is now possible with a "third-phase strategy" which the authors explain from theoretical and practical points of view. The book is still the only one detailing strategies for solid state electroanalysis.

Features

► Completely revised and considerably extended new edition ► Details strategies for solid-state electroanalysis ► Highlights three-phase electrochemistry and ion transfer between liquid phases

European Autonomy in Space

The volume provides analyses and evaluations of the continuing importance of Europe's autonomy in its access to space as a key driver in the development of European space capabilities. From a detailed historical analysis of some of the pitfalls of dependence in the space industry, experts analyze the full range of current European space capabilities and identify areas where autonomy is both possible and required, even in a situation of severe budgetary constraints. The contributions present a comprehensive overview of European efforts in a broad range of areas including energy, culture, science, and security; access to space, space applications, human spaceflight, security and space situational awareness, and strategic issues. They make a cogent strategic and economic case for policy makers to continue to bear in mind the importance of autonomous space capabilities, even in an interdependent globalized world.

Features

► Reflects Europe's development within the space industry with autonomy as a driving factor ► Comprehensive overview of European efforts in areas such as energy, culture, science and security ► Shows importance of autonomous space capabilities even in an interdependent globalized world

Yearbook on Space Policy 2012/2013

Space in a Changing World

The Yearbook on Space Policy is the reference publication analyzing space policy developments. Each year it presents issues and trends in space policy and the space sector as a whole. Its scope is global and its perspective is European. The Yearbook also links space policy with other policy areas. It highlights specific events and issues, and provides useful insights, data and information on space activities. The Yearbook on Space Policy is edited by the European Space Policy Institute (ESPI) based in Vienna, Austria. It combines in-house research and contributions of members of the European Space Policy Research and Academic Network (ESPRAN), coordinated by ESPI.

Features

► Collection of unique facts and figures for the year ► Perspective on selected issues by international experts in the fields ► Summary and analysis of the main policy issues of the year

Contents

European space activities in the global context. - Global trends and their impact on space. - India and other maturing Asian space enthusiasts. - The globalisation of space activities. - New space for security. - The impact of China's rise in space. - Russia: Space exploration and development prospects. - Emerging space powers of Latin America: Argentina and Brazil. - The future regulation of outer space.- Chronology: June 2012-December 2013.

Index Matrices: Towards an Augmented Matrix Calculus

This book presents the very concept of an index matrix and its related augmented matrix calculus in a comprehensive form. It mostly illustrates the exposition with examples related to the generalized nets and intuitionistic fuzzy sets which are examples of an extremely wide array of possible application areas. The present book contains the basic results of the author over index matrices and some of its open problems with the aim to stimulating more researchers to start working in this area.

Features

► Presents the very concept of an index matrix and its related augmented matrix calculus in a comprehensive form ► Illustrated with examples related to the generalized nets and intuitionistic fuzzy sets ► Contains original research and basic results of index matrices and open problems

Contents

Index matrices: definitions, operations, relations.- Intuitionistic Fuzzy IMs.- Extended index matrices.- Temporal IFIMs.- Index matrices with function-type of elements.- Three dimensional IMs.

Computational Intelligence Applications in Modeling and Control

The development of computational intelligence (CI) systems was inspired by observable and imitable aspects of intelligent activity of human being and nature. The essence of the systems based on computational intelligence is to process and interpret data of various nature so that CI is strictly connected with the increase of available data as well as capabilities of their processing, mutually supportive factors. Developed theories of computational intelligence were quickly applied in many fields of engineering, data analysis, forecasting, biomedicine and others. They are used in images and sounds processing and identifying, signals processing, multidimensional data visualization, steering of objects, analysis of lexicographic data, requesting systems in banking, diagnostic systems, expert systems and many other practical implementations.

Features

► Presents trends and applications in modeling and control of computational intelligence ► Selected collection of contributions from International Conference On Control, Engineering & Information Technology (CEIT'14), March 22-25, 2014, Sousse, Tunisia ► Written by experts in the field

Advanced Electromagnetics and Scattering Theory

This book presents the lecture notes used in two courses that the late Professor Kasra Barkeshli had offered at Sharif University of Technology, namely, Advanced Electromagnetics and Scattering Theory. The prerequisite for the sequence is vector calculus and electromagnetic fields and waves. Some familiarity with Green's functions and integral equations is desirable but not necessary. The book provides a brief but concise introduction to classical topics in the field. It is divided into three parts including annexes. Part I covers principle of electromagnetic theory. The discussion starts with a review of the Maxwell's equations in differential and integral forms and basic boundary conditions.

Features

▶ Offers one of the most comprehensive monographs ever written with the subject of electromagnetic radiation and scattering ▶ Enables the understanding of fundamentals without many prerequisites ▶ Includes a fundamental introduction to numerical methods

Contents

Part I Electromagnetic Theory: Maxwell's Equations.- Radiation.- Fundamental Theorems.- Wave Harmonics And Guided Waves.- Part II Scattering Theory: Radar.- Canonical Scattering Problems.- Approximate Methods.- Integral Equation Method.- Method of Moments.- Periodic Structures.- Inverse Scattering.- Appendices: Vector Analysis.- Vector Calculus.- Bessel Functions.

Multiprocessor Scheduling for Hard-Real-Time Systems

This book provides a comprehensive overview of both theoretical and pragmatic aspects of resource-allocation and scheduling in multiprocessor and multicore hard-real-time systems. The authors derive new, abstract models of real-time tasks that capture accurately the salient features of real application systems that are to be implemented on multiprocessor platforms and identify rules for mapping application systems onto the most appropriate models.

Features

▶ Provides the first, single-source reference to multiprocessor scheduling for hard-real-time systems ▶ Equips readers with systematic categorization of multiprocessor scheduling methods ▶ Reveals new run-time multiprocessor scheduling algorithms, which are demonstrably better than those currently used, both in terms of run-time efficiency and tractability of off-line analysis

Contents

Introduction.- Background and Models.- Optimal global scheduling on identical machines.- FJP/FTP global scheduling on identical machines.- Partitioned scheduling on identical machines.- Semi-partitioned/ clustered scheduling on identical machines.- Scheduling on uniform and unrelated machines.- Resource-sharing protocols.- Multiprocessor servers.- Other (not yet mature) topics.

Cased-Hole Log Analysis and Reservoir Performance Monitoring

This book addresses vital issues, such as the evaluation of shale gas reservoirs and their production. Topics include the cased-hole logging environment, reservoir fluid properties; flow regimes; temperature, noise, cement bond, and pulsed neutron logging; and casing inspection. Production logging charts and tables are included in the appendices. The work serves as a comprehensive reference for production engineers with upstream E&P companies, well logging service company employees, university students, and petroleum industry training professionals.

Features

► Provides methods of conveying production logging tools along horizontal well segments as well as measurements of formation electrical resistivity through casing ► Covers new information on fluid flow characteristics in inclined pipe and provides new and improved nuclear tool measurements in cased wells ► Includes updates on cased-hole wireline formation testing

Contents

Introduction.- Cased-Hole Logging Environment.- Reservoir Fluid Properties.- Flow Regimes.- Flowmeters.- Radioactive Tracer Logs.- Fluid Identification.- Temperature Logging.- Noise Logging.- Interpretation.- Formation Evaluation Through Casing.- Cement Bond Logging.- Casing Inspection.- Well and Field Monitoring.- Appendixes: Production Logging Charts and Tables.- General Bibliography.- Index.

TLM 2.0: From the Ground Up

A Pragmatic Approach to Learning and Applying the SystemC TLM 2.0 Standard

Following the popular second edition of SystemC: From the Ground Up, this book continues in providing accessible information on how to create and use TLM 2.0 models in SystemC. Concepts are carefully described, followed by syntax and application examples. Exercises at the end of each chapter will give the reader practice material.

Features

► Uses a straightforward approach designed for practitioners, including numerous examples and exercises, as well as common problems (“gotchas”) that may be encountered by novices ► Provides pragmatic information on how to create and use TLM 2.0 models ► Begins each topic with a use-case or scenario that needs solving, then introduces necessary concepts and provides a solution in the form of worked out code ► Downloadable examples will also be provided from a website

Contents

Concepts.- Connectivity.- Standardizing Transactions.- Coding for speed – LT (Loosely Timed).- Coding for accuracy – AT (Approximately Timed).- A Small System Example.- Debugging TLM.- Extracting Data with TLM 2.0.- Dangers of TLM 2.0.- Rules of TLM 2.0.

Model-based Fault Detection in Hybrid Systems Using Bond Graphs

This book presents bond graph model-based fault detection with a focus on hybrid system models. The book addresses model design, simulation, control and model-based fault diagnosis of multi-disciplinary engineering systems. The text begins with a brief survey of the state-of-the-art, then focuses on hybrid systems. The author then uses different bond graph approaches throughout the text and provides case studies.

Features

► Examines how bond graph model-based fault detection in hybrid systems can be used in engineering ► Includes schematics and bond graph drawings along with the display of simulation runs ► Discusses how bond graph model-based fault detection is related to modeling, simulation, control and fault diagnosis of mechatronic systems

Contents

Introduction.- Bond Graph Representations of Hybrid System Models.- Structural Control Properties of Switched LTI Systems.- Bond Graph Model-based Quantitative FDI in Hybrid Systems.- Parameter Uncertainties.- Isolation of Multiple Parametric Faults from a Hybrid Model.- ARR based System Mode Identification.- Applications.- Failure Prognosis for Hybrid Systems Based on ARR Residuals.- Overall Conclusion and Discussion.

Control Mechanisms for Ecological-Economic Systems

This monograph presents and analyzes the optimization, game-theoretic and simulation models of control mechanisms for ecological-economic systems. It is devoted to integrated assessment mechanisms for total risks and losses, penalty mechanisms, risk payment mechanisms, financing and costs compensation mechanisms for risk level reduction, sales mechanisms for risk level quotas, audit mechanisms, mechanisms for expected losses reduction, economic motivation mechanisms, optimization mechanisms for regional environmental (risk level reduction) programs, and mechanisms for authorities' interests coordination.

Features

► Presents recent research on control mechanisms for ecological-economic systems ► Suggests integrated assessment mechanisms for total risks and losses, penalty mechanisms, risk payment mechanisms and many other ► Valuable for experts and students in mathematical modeling and control of ecological economic, socioeconomic and organizational systems

Radiation-Tolerant Delta-Sigma Time-to-Digital Converters

This book focuses on the design of a Mega-Gray (a standard unit of total ionizing radiation) radiation-tolerant ps-resolution time-to-digital converter (TDC) for a light detection and ranging (LIDAR) system used in a gamma-radiation environment. Several radiation-hardened-by-design (RHBD) techniques are demonstrated throughout the design of the TDC and other circuit techniques to improve the TDC's resolution in a harsh environment are also investigated. Readers can learn from scratch how to design a radiation-tolerant IC.

Features

► Discusses important aspects of radiation-tolerant analog IC design, including realistic applications and radiation effects on ICs ► Demonstrates radiation-hardened-by-design techniques through a design-test-radiation assessment practice ► Describes a new type of Time-to-Digital (TDC) converter designed for radiation-tolerant application ► Explains the design and measurement of all functional blocks (e.g., bandgap reference, relaxation oscillator) in the TDC

Contents

Fuzzy Logic Augmentation of Nature-Inspired Optimization Metaheuristics

Theory and Applications

This book describes recent advances on fuzzy logic augmentation of nature-inspired optimization metaheuristics and their application in areas such as intelligent control and robotics, pattern recognition, time series prediction and optimization of complex problems. The book is organized in two main parts, which contain a group of papers around a similar subject. The first part consists of papers with the main theme of theoretical aspects of fuzzy logic augmentation of nature-inspired optimization metaheuristics, which basically consists of papers that propose new optimization algorithms enhanced using fuzzy systems.

Features

► Describes recent advances on fuzzy logic augmentation of nature-inspired optimization metaheuristics ► Includes various application in areas such as intelligent control and robotics, pattern recognition, time series prediction and optimization of complex problems ► The book is organized in two main parts focusing on theoretical aspects of fuzzy logic augmentation of nature-inspired optimization metaheuristics (part 1), as well as application of optimization algorithms (part 2)

On-Chip ESD Protection for RF/Microwave Integrated Circuits

This book enables readers to design effective ESD protection solutions for all mainstream RF fabrication processes (GaAs pHEMT, SiGe HBT, CMOS). The new techniques introduced by the authors have much higher protection levels and much lower parasitic effects than those of existing ESD protection devices. The authors describe in detail the ESD phenomenon, as well as ESD protection fundamentals, standards, test equipment, and basic design strategies. Readers will benefit from realistic case studies of ESD protection for RFICs and will learn to increase significantly modern RFICs' ESD safety level, while maximizing RF performance.

Features

► Describes in detail the ESD phenomenon, as well as ESD protection fundamentals, standards, test equipment, and basic design strategies ► Enables readers to design effective ESD protection solutions for all mainstream RF fabrication processes (GaAs pHEMT, SiGe HBT, CMOS) ► Includes realistic case studies of ESD protection for RFICs that resulted in significantly increased ESD safety level, while maximizing RF performance

Wavelet Transforms and Their Applications

This textbook is an introduction to wavelet transforms and accessible to a larger audience with diverse backgrounds and interests in mathematics, science, and engineering. Emphasis is placed on the logical development of fundamental ideas and systematic treatment of wavelet analysis and its applications to a wide variety of problems as encountered in various interdisciplinary areas.

Features

► Includes exercises at the end of each chapter and provides a section of selected answers to exercises ► Differs from many textbooks due to major emphasis placed on numerous topics and systematic development of underlying theories ► Provides an introduction to wavelet transforms while being accessible to a broad audience ► New revised chapters on Extensions of Multiresolution Analysis, New Lawds's Harmonic Wavelets, and Applications of Wavelet Transforms

Contents

Brief Historical Introduction.- Hilbert Spaces and Orthonormal Systems.- Fourier Transformations and Their Applications.- The Gabor Transform and Time-Frequency Signal Analysis.- The Wigner-Ville Distribution and Time-Frequency Signal Analysis.- The Wavelet Transforms and Their Basic Properties.- Multiresolution Analysis and Construction of Wavelets.- Extensions of Multiresolution Analysis.- Newland's Harmonic Wavelets.- Wavelet Transform Analysis of Turbulence.

Applied Systems Theory

Offering an up-to-date account of systems theories and its applications, this book provides a different way of resolving problems and addressing challenges in a swift and practical way, without losing overview and not having a grip on the details. From this perspective, it offers a different way of thinking in order to incorporate different perspectives and to consider multiple aspects of any given problem. Drawing examples from a wide range of disciplines, it also presents worked cases to illustrate the principles. The multidisciplinary perspective and the formal approach to modeling of systems and processes of 'Applied Systems Theory' makes it suitable for managers, engineers, students, researchers, academics and professionals from a wide range of disciplines; they can use this 'toolbox' for describing, analysing and designing biological, engineering and organisational systems as well as getting a better understanding of societal problems.

Features

► Presents a formal and consistent modelling approach based on system theories that is applicable to a wide range of systems ► Draws on examples from a wide range of applications and elucidates the principles with illustrations and worked examples ► Offers a unique overview of basic concepts, as well as advances in research applied to a wide variety of settings

Compact Models and Performance Investigations for Sub-threshold Interconnects

The book provides a detailed analysis of issues related to sub-threshold interconnect performance from the perspective of analytical approach and design techniques. Particular emphasis is laid on the performance analysis of coupling noise and variability issues in sub-threshold domain to develop efficient compact models. The proposed analytical approach gives physical insight of the parameters affecting the transient behavior of coupled interconnects. Remedial design techniques are also suggested to mitigate the effect of coupling noise. The effects of wire width, spacing between the wires, wire length are thoroughly investigated.

Features

► Provides compact analytical approach for sub-threshold electrical on-chip interconnects ► Includes comprehensive analysis of coupling noise for sub-threshold circuits ► Investigates variability issues in sub-threshold domain to develop efficient compact models

S-Variable Approach to LMI-Based Robust Control

This book shows how the use of S-variables (SVs) in enhancing the range of problems that can be addressed with the already-versatile linear matrix inequality (LMI) approach to control can, in many cases, be put on a more unified, methodical footing. Beginning with the fundamentals of the SV approach, the text shows how the basic idea can be used for each problem (and when it should not be employed at all). The specific adaptations of the method necessitated by each problem are also detailed.

Features

► Detailed account of the slack-variable approach to the increasingly popular study of linear-matrix-inequality-based control ► Easily understandable exposition provides an entry path for non-experts to the latest control theory ► Explicit description of LMI conditions enables readers to code them into programs in order to realise their effectiveness ► Practical examples exemplify the guidelines on how to put theoretical LMI results into practice

Contents

Introduction.- Robust Performance Analysis of LTI Systems.- Descriptor Case and System Augmentation.- Robust State-Feedback Synthesis for LTI Systems.- Multi-Objective Controller Synthesis for LTI Systems.- Static Output-Feedback Synthesis.- Robust Performance Analysis of Discrete-Time Periodic Systems.- Robust Controller Synthesis of Periodic Discrete-Time Systems.

Statics

Learning from Engineering Examples

This textbook introduces and explains the basic concepts on which Statics is based utilizing real engineering examples. The authors emphasize the learning process by showing a real problem, analyzing it, simplifying it, and developing a way to solve it. This feature teaches students intuitive thinking in solving real engineering problems using fundamental Newton's laws.

Features

► Stresses representation of physical reality ways that allow students to solve problems and obtain meaningful results ► Emphasizes identification of important features of the structure that should be included in a model and which features may be omitted ► Facilitates students' understanding and mastery of the "flow of thinking" practiced by professional engineers

This book introduces Radio Frequency Propagation to a broad audience. The author blends theory and practice to bring readers up-to-date in key concepts, underlying principles and practical applications of wireless communications. The presentation is designed to be easily accessible, minimizing mathematics and maximizing visuals.

Features

► Provides a concise and easily accessible introduction to Radio Frequency Propagation ► Brings readers up to date in key concepts, underlying principles and practical applications of wireless communications ► Blends theory and practice in a presentation designed to make difficult topics easy to understand

Contents

Introduction to Radio Frequency.- Free Space Propagation.- Multipath Propagation.- Empirical Propagation Models.- Statistical Analysis In RF Engineering.- Radio Frequency Coverage: The Cell.- Global RF & CO2 Pollution: Transition to Green Cellular Technology.

Innovations in Practice

The research book is focused on the recent advances in computer vision methodologies and innovations in practice.

Features

► Focuses on computer vision methodologies and technical solutions applied to advanced control systems using conventional and intelligent paradigms ► Presents applications and practical innovations of applied computer vision and vision-based control systems ► Written by experts in the field

Contents

Computer Vision in Advanced Control Systems: Innovations in Practice.- Human Action Recognition: Contour-Based and Silhouette-based Approaches.- The Application of Machine Learning Techniques to Real Time Audience Analysis Sy.- Panorama Construction from Multi-view Cameras in Outdoor Scenes.- A New Real-Time Method of Contextual Image Description and Its Application in Robot Navigation and Intelligent Control.- Perception of Audio Visual Information for Mobile Robot Motion Control Systems.- Adaptive Surveillance Algorithms Based on the Situation Analysis.- Enhanced, Synthetic and Combined Vision Technologies.- Navigation of Autonomous Underwater Vehicles Using Acoustic and Visual Data Processing.- Efficient Denoising Algorithms for Intelligent Recognition Systems.- Image Segmentation Based on Two-dimensional Markov Chains.

Emotional Engineering (Vol. 3)

This book examines how theories of human emotion can be applied to engineering in order to improve product design and value. 'Emotional Engineering Vol. 3' establishes the idea that customer satisfaction can be maximised by using knowledge and experience in a more flexible manner to respond to a fast-changing world. This integration of emotion and knowledge introduces the reader to the concept of Wisdom Engineering. It also highlights the importance of emotion in creating value for the customer, and how this can be achieved by acknowledging a customer's creativity and by facilitating the customization of products for their needs and preferences. As has been identified by neuroscientists, emotion and reason are strongly interconnected, and the increasing complexities and diversification found in the products we use demonstrates the growing significance of emotion when designing these products. Society is comprised of humans and artificial products; their integration is important when considering product design, and improving quality-of-life for the customer. 'Emotional Engineering Vol.

Features

► Examines how theories of human emotion can be applied to engineering in order to improve product design and value ► Introduces the reader to the concept of Wisdom Engineering ► Highlights the importance of emotion in creating value for the customer

Regulated Open Multi-Agent Systems (ROMAS)

A Multi-Agent Approach for Designing Normative Open Systems

Addressing the open problem of engineering normative open systems using the multi-agent paradigm, normative open systems are explained as systems in which heterogeneous and autonomous entities and institutions coexist in a complex social and legal framework that can evolve to address the different and often conflicting objectives of the many stakeholders involved. Presenting a software engineering approach which covers both the analysis and design of these kinds of systems, and which deals with the open issues in the area, ROMAS (Regulated Open Multi-Agent Systems) defines a specific multi-agent architecture, meta-model, methodology and CASE tool.

Features

► Analyzes the specific requirements for designing normative open systems and discusses to what extent current agent methodologies support it ► Presents a software engineering approach that covers the analysis and design of these kinds of systems ► Provides a detailed and easy to understand description of the ROMAS approach

Contents

1.-Introduction 2.-Requirements for designing normative open multiagent systems 3.- State of the art 4.- ROMAS approach overview 5.-ROMAS modeling language 6.-ROMAS methodology 7.- ROMAS development framework 8.- ROMAS approach evaluation 9.- Conclusions

Dynamic Systems for Everyone

A Better Way to Understand How Our World Works

This book is a study of the interactions between different types of systems, their environment, and the interactions of the subsystems within a system. The author explains how basic systems principles are applied in physical (mechanical, electromechanical, etc.) systems and then guides the reader carefully to understand how the same principles can be extrapolated to social, political, economic systems, as well as everyday life. Readers from a variety of disciplines will benefit from the understanding of system behavior they will gain from this book and will be able to apply those principles in various contexts. The author reveals how principles such as feedback control can be applied to natural and social contexts, whereas system dynamics can also be applied to mechanical and electromechanical systems. The treatment of the subject is non-mathematical, and the book considers some of the latest concepts in the systems discipline, such as agent-based systems, optimization, and discrete events and procedures.

Features

► Shows how system knowledge may be applied in many different areas without the need for deep mathematical knowledge ► Demonstrates how to model and simulate system behavior on personal computers with readily available software packages ► Discusses the benefits of systems with highly distributed intelligence and the ways in which they may be modeled ► Discusses how to incorporate discrete events and sequential steps in system dynamics

Introduction to Micromechanisms and Microactuators

This book presents a basic introduction to micromechanisms and microactuators, particularly to their basic configurations and design. This book fills the persisting gap in the published literature on the mechanical manipulative aspects of micromechanisms. It also helps in offering specialized introductory courses on micromechanisms and microactuators not as part of MEMS sensing devices, but as mechanical manipulative systems. The level of the book is suitable for use in both undergraduate and introductory graduate programmes. The book presents an overview of miniaturization and scaling laws, basic design principles of micro-sized mechanisms and actuators, micro-fabrication processes, and some futuristic issues. The volume contains a large number of figures and illustrations for easy understanding by the readers.

Features

► Fills up the persisting gap in the published literature on the mechanical manipulative aspects of Micromechanisms ► Presents an overview of miniaturization and scaling laws, basic design principles of micro-sized mechanical mechanisms and actuators, micro-fabrication processes and some futuristic issues ► Contains large number of simple illustrations for clarity and easy to understand material for undergraduate and/or graduate level courses ► Includes a special chapter on 'Scaling Laws' that forms the basic foundation for the 'science of miniaturization'

Additive Manufacturing Technologies

3D Printing, Rapid Prototyping, and Direct Digital Manufacturing

This book covers in detail the various aspects of joining materials to form parts. A conceptual overview of rapid prototyping and layered manufacturing is given, beginning with the fundamentals so that readers can get up to speed quickly.

Features

► Reflects recent developments and trends and adheres to the ASTM, SI and other standards ► Includes chapters on automotive technology, aerospace technology and low-cost AM technologies ► Provides a broad range of technical questions to ensure comprehensive understanding of the concepts covered

Contents

Introduction and basic principles.- Development of AM technology.- Generalized AM process chain.- Photopolymerisation processes.- Powder bed fusion processes.- Extrusion based systems.- Printing processes.- Sheet lamination processes.- Beam deposition processes.- Direct write technologies.- Low-cost AM technologies.- Guidelines for process selection.- Post-processing.- Software issues for AM.- AM Standards.- Multiple materials in AM.- Direct Digital Manufacturing.- Design for AM.- Rapid tooling.- Medical applications for AM.- Aerospace applications for AM.- Automotive applications for AM.- Business opportunities and future directions.

Initial Airworthiness

Determining the Acceptability of New Airborne Systems

Designed as an introduction for both advanced students in aerospace engineering and existing aerospace engineers, this book covers both engineering theory and professional practice in establishing the airworthiness of new and modified aircraft.

Features

► Covers the entire process of establishing initial airworthiness for new aerospace products ► A one-stop reference detailing the current regulations in both Europe and North America ► Provides instruction on professional practice in airworthiness

Contents

What is airworthiness?.- The atmosphere.- The pitot static system.- The flight envelope.- First principles of structural approval.- Approving an aircraft's main flight structure.- Undercarriage structural approval.- Control surfaces and circuits.- Powerplant airworthiness.- Crashworthiness.- Introduction to flying qualities evaluation.- Longitudinal stability and control.- Lateral and directional stability and control.- Aeroplane Asymmetry.- Stalling characteristics.- Systems assessment.- Facilitating continued airworthiness.

Information Adaptation: The Interplay Between Shannon Information and Semantic Information in Cognition

This monograph demonstrates the interplay between Shannon information and semantic information in cognition.

Features

► Shows and explains how Shannon's information acts as driving force for the formation of semantic information, and vice versa too, namely, that semantic information participates in the formation of Shannonian information ► Demonstrates that, in cognition, Shannonian and semantic information are interrelated as two aspects of a cognitive process ► Illustrates the concepts and mathematics by reference to three cognitive processes: pattern recognition, face learning and the recognition of a moving object

Contents

Shannonian versus semantic information and cognition.- Information versus data.- The empirical basis of information adaptation.- A complexity theory approach to information.- On synergetic computers and other machines.- Pattern recognition as a paradigm of information adaptation.- From general principles of information adaptation to concrete specific models.- Some further applications and discussions of information adaptation.

Brain-Computer Interfaces

Current Trends and Applications

The success of a BCI system depends as much on the system itself as on the user's ability to produce distinctive EEG activity. BCI systems can be divided into two groups according to the placement of the electrodes used to detect and measure neurons firing in the brain. These groups are: invasive systems, electrodes are inserted directly into the cortex are used for single cell or multi unit recording, and electrocorticography (EcoG), electrodes are placed on the surface of the cortex (or dura); noninvasive systems, they are placed on the scalp and use electroencephalography (EEG) or magnetoencephalography (MEG) to detect neuron activity. The book is basically divided into three parts. The first part of the book covers the basic concepts and overviews of Brain Computer Interface. The second part describes new theoretical developments of BCI systems. The third part covers views on real applications of BCI systems.

Features

► Presents current trends and applications in Brain Computer Interface technology ► Presents novel paradigms for EEG signal recording, advanced methods for processing them, new applications for Brain Computer Interface systems ► Describes software and hardware packages used for Brain Computer Interface applications ► Written by experts in the field

Game Theoretic Analysis of Congestion, Safety and Security

Maximizing reader insights into the interactions between game theory, excessive crowding and safety and security elements, this book establishes a new research angle by illustrating linkages between different research approaches and through laying the foundations for subsequent analysis. Congestion (excessive crowding) is defined in this work as all kinds of flows; e.g., road/sea/air traffic, people, data, information, water, electricity, and organisms.

Features

► Introduces aspects of safety, security and game theory into discussions focused on excessive crowding ► Considers systems where congestion occurs, which may be in parallel, series, inter-linked, or interdependent, with flows one way or both ways ► Provides improved tools for handle congestion whilst ensuring safety and security against various threats

Contents

1.- Congestion Management in Motorways and Urban Networks through a Bargaining-Game-Based Coordination Mechanism 2.-Advanced Information Feedback Coupled with an Evolutionary Game in Intelligent Transportation Systems 3.-Solving a Dynamic User-Optimal Route Guidance Problem Based on Joint Strategy Fictitious Play 4.-A Psycho-Social Agent-Based Model of Driver Behavior Dynamics

Writing Virtual Environments for Software Visualization

Writing Virtual Environments for Software Visualization book describes the software for a networked, 3D multi-user virtual environment that allows users to create and share remotely visualizations of program behavior. Collaborative virtual environments such as World of Warcraft or Second Life are a popular way to share interactive internet experiences, but they are complex and difficult to create. Software visualization is an area that may enable important advances in our ability to understand and reduce the costs of maintaining software. Applying the former technology to this problem area will be valuable to distributed and multi-institutional software development and educational users. The author covers the major features of collaborative virtual environments and how to program them in a very high level language.

Features

► Discusses the acquisition of program behavior data to be visualized ► Demonstrates the integration of multiple 2D and 3D dynamic views within a 3D scene ► Presents the network messaging capabilities to share those visualizations

Contents

Software Instrumentation and Data Collection.- Visualizing Aspects of Program Behavior.- Integrating Multiple Views.- Sharing Visualizations Across a Network.- Virtual Environments.- Dynamic World Models.- Non-Player Characters and Quests.- Dynamic Texturing and Embedded Visualizations.- Bug Hunting.

Fractional Linear Systems and Electrical Circuits

This monograph covers some selected problems of positive and fractional electrical circuits composed of resistors, coils, capacitors and voltage (current) sources. The book consists of 8 chapters, 4 appendices and a list of references. Chapter 1 is devoted to fractional standard and positive continuous-time and discrete-time linear systems without and with delays.

Features

► Recent original research on fractional linear systems and electrical circuits ► Presents selected problems of positive and fractional electrical circuits composed of resistors, coils, capacitors and voltage sources ► Includes 4 appendices devoted to basic definitions and theorems on Laplace and Z-transforms, elementary row and column operations on matrices, some properties of the nilpotent matrices, as well as the definition of Drazin inverse of matrices and its properties

Contents

Fractional differential equations.- Positive fractional electrical circuits.- Descriptor linear electrical circuits and their properties.- Stability of positive standard linear electrical circuits.- Reachability, observability and reconstructibility.- Standard and fractional linear circuits with feedbacks.- Minimum energy control of electrical circuits.- Fractional 2D systems described by the Roesser model.- Laplace transforms and Z-transforms.- Elementary operations on matrices.- Nilpotent matrices.- Drazin inverse matrix.

Micro-Relay Technology for Energy-Efficient Integrated Circuits

This volume describes the design of relay-based circuit systems from device fabrication to circuit micro-architectures. This book is ideal for both device engineers as well as circuit system designers, and highlights the importance of co-design across design hierarchies when trying to optimize system performance (in this case, energy-efficiency). The book will also appeal to researchers and engineers focused on semiconductor, integrated circuits, and energy efficient electronics.

Features

► Covers microsystem fabrication, MEMS device design, circuit design, circuit micro-architecture and CAD ► Describes work previously done in the field and also lays the groundwork and criteria for future energy-efficient device and system design ► Maximizes reader insights into the design and modeling of micro-relay, micro-relay reliability, integrated circuit design with micro-relays, and more

Contents

A New Era of Old Electronics.- Design and Modeling of Micro-Relay.- Micro-Relay Technologies.- Micro-Relay Reliability.- Optimization and Scaling of Micro-Relays for Ultra-Low-Power Digital Logic.- Integrated Circuit Design with Micro-Relays.- Micro-Relay Circuits for VLSI Applications.

Hermann Haken: From the Laser to Synergetics

A Scientific Biography of the Early Years

Hermann Haken (born 1927) is one of the "fathers" of the quantum-mechanical laser theory, formulated between 1962 and 1966, in strong competition with American researchers. Later on, he created Synergetics, the science of cooperation in multicomponent systems. The book concentrates on the development of his scientific work during the first thirty-five years of his career.

Features

► Presents the early years of Hermann Haken, who is one of the "fathers" of Quantum-mechanical laser theory as well as the founder of Synergetics, the science of cooperation in multicomponent systems ► Covers the development of Hermann Hakens thoughts during the first thirty-five years of his career ► In-depth presentation of the scientific career of one of the last polymaths

Contents

Introduction .- Hermann Haken: Youth and university education.-The Erlangen years: Solid State Physics 1950 – 1960.- Appointment to the Theoretical Physics Chair at the Technical University Stuttgart.- Hermann Haken and the "Stuttgart School", 1960 – 1970: their contribution to the development of laser theory.- Early years of Synergetics: 1970 – 1978.- The Propagation of Synergetics: 1978 - 1987.- Synergetics 1987–2010: Applications in medicine, cognition and psychology – a survey.- Theories of self-organization: The role of synergetics.

Quantitative Model-Based Analysis of Real-Time Embedded Systems

The Quasimodo Project

Characteristic for embedded systems is that they have to meet a multitude of quantitative constraints such as resource-, real-time-, or energy-consumption constraints. Model-Driven Development is a new software development technique in which the primary software artifacts are models providing a collection of views. Existing model-driven tools for real-time embedded systems are limited with respect to their treatment of quantitative constraints. This book presents methods and tools for dealing with quantitative constraints in model-driven development of embedded systems. It provides: 1. methods for modelling various quantitative aspects of embedded systems; 2. a wide range of powerful techniques and tools for analyzing such models; 3. methods for schedulability analysis, controller synthesis, and model-based testing with quantitative properties; 4. several industrial case studies demonstrating the strength of the techniques and tools.

Features

► Starters' tutorial on model checking for timed systems ► Latest methods, techniques, and tools for model-based, quantitative analysis of embedded systems ► All methods, techniques, and tools demonstrated on industrial examples

Biomedical Technology

During the last years computational methods lead to new approaches that can be applied within medical practice. Based on the tremendous advances in medical imaging and high-performance computing, virtual testing is able to help in medical decision processes or implant designs. Current challenges in medicine and engineering are related to the application of computational methods to clinical medicine and the study of biological systems at different scales. Additionally manufacturers will be able to use computational tools and methods to predict the performance of their medical devices in virtual patients. The physical and animal testing procedures could be reduced by virtual prototyping of medical devices. Here simulations can enhance the performance of alternate device designs for a range of virtual patients. This will lead to a refinement of designs and to safer products.

Features

► Recent research in Biomedical Technology ► Focuses on implants and implant design ► Presents models of tissues and biological systems

Sensing Technology: Current Status and Future Trends III

This book contains a collection of selected works stemming from the 2013 International Conference on Sensing Technology (ICST), which was held in Wellington, New Zealand. The purpose of the book is to distill the highlights of the conference, and therefore track the latest developments in sensing technologies. The book contents are broad, since sensors can be applied in many different areas.

Features

► Provides a broad overview of advanced sensor technologies ► Addresses the identification, modeling, selection, operation and integration of a wide variety of sensors ► Demonstrates the concepts of different sensors technology through simulation, design and real implementations

Contents

From the Contents: Review of the use of the optical fibers for safety applications in tunnels and car parks: pollution monitoring, fire and explosive gas detection.- Evanescent wave absorption based fiber-optic sensor - cascading of bend and tapered geometry for enhanced sensitivity.- Design of High-Resolution Optical Systems for Fast and Accurate Surface Reconstruction.- On the use of light sensors and pattern recognition techniques for automated detection of street lighting lamps.

Algorithmic Aspects of Analysis, Prediction, and Control in Science and Engineering

An Approach Based on Symmetry and Similarity

This book demonstrates how to describe and analyze a system's behavior and extract the desired prediction and control algorithms from this analysis. A typical prediction is based on observing similar situations in the past, knowing the outcomes of these past situations, and expecting that the future outcome of the current situation will be similar to these past observed outcomes.

Features

► Presents how symmetries can be used in all classes of algorithmic problems of sciences and engineering ► Shows how the symmetry-based approach can be used in the analysis of real-life systems, from prediction to control ► Written by leading experts in the field

Contents

Introduction: Symmetries and Similarities as a Methodology for Algorithmics of Analysis, Prediction, and Control in Science and Engineering.- Algorithmic Aspects of Real-Life Systems Analysis: Approach Based on Symmetry and Simila.- Algorithmic Aspects of Prediction: An Approach Based on Symmetry and Similarity.- Algorithmic Aspects of Control: Approach Based on Symmetry and Similarity.- Possible Ideas for FutureWork.

Advances in Robust Fractional Control

This monograph presents design methodologies for (robust) fractional control systems. It shows the reader how to take advantage of the superior flexibility of fractional control systems compared with integer-order systems in achieving more challenging control requirements. There is a high degree of current interest in fractional systems and fractional control arising from both academia and industry and readers from both milieux are catered to in the text. Different design approaches having in common a trade-off between robustness and performance of the control system are considered explicitly. The text generalizes methodologies, techniques and theoretical results that have been successfully applied in classical (integer) control to the fractional case.

Features

► Extends and generalizes already-well-known techniques from integer-order to fractional-order systems giving greater flexibility and more powerful control ► Presents novel material in a unified framework to form an important reference for researchers ► Novel approach to robust control achieves required phase margins despite variations in process gain

Contents

Probabilistic Composition of Preferences, Theory and Applications

Putting forward a unified presentation of the features and possible applications of probabilistic preferences composition, and serving as a methodology for decisions employing multiple criteria, this book maximizes reader insights into the evaluation in probabilistic terms and the development of composition approaches that do not depend on assigning weights to the criteria.

Features

► Provides a unified presentation of the different features and possible applications of probabilistic preferences composition ► Features computational routines for probabilistic transformation and composition ► Considers the application of the probabilistic composition of preferences to important areas of management

Contents

Multiple Criteria Decision Analysis.- Approaches to Criteria Combination.- The Probabilistic Approach to Preferences Measurement.- Computation of Probabilities of Preference.- Composition by Joint Probabilities.- Composition by DEA Distance to the Frontier.- Dynamic Probabilistic Indices.- Probabilities in the Problem of Classification.- Capacities Determination.- Rough Sets Modeling.- Application to FMEA Priority Assessments.- Appendix.

Metacognition: Fundamentals, Applications, and Trends

A Profile of the Current State-Of-The-Art

This book is devoted to the Metacognition arena. It highlights works that show relevant analysis, reviews, theoretical, and methodological proposals, as well as studies, approaches, applications, and tools that shape current state, define trends and inspire future research. As a result of the revision process fourteen manuscripts were accepted and organized into five parts as follows: · Conceptual: contains conceptual works oriented to: (1) review models of strategy instruction and tailor a hybrid strategy; (2) unveil second-order judgments and define a method to assess metacognitive judgments; (3) introduces a conceptual model to describe the metacognitive activity as an autopoietic system.

Features

► Provides an updated view of the application of metacognition to the educational arena ► Pursues to identify the metacognitive logistics: theories, models, frameworks, and methods ► Sketches a conceptual frame composed by: theoretical, formal, technological and experimental topics

Design and Implementation of Sigma Delta Modulators ($\Sigma\Delta$) for Class D Audio Amplifiers using Differential Pairs

This book focuses on the design of a 3rd Order CT- $\Sigma\Delta$ where the integrator stages of the filter are implemented with Bipolar-Junction Transistors (BJT) differential pairs. These circuits are fully analyzed and the design method is carefully explained. The design method is validated through experimental measurements of several prototype circuits.

Features

► Introduces readers to one of the premier solutions in signal conversion, for low frequency, high-resolution applications ► Describes a novel approach for the design of the integrator stages of the modulator ► Explains how to analyze and design a continuous time Sigma-Delta Modulator ($\Sigma\Delta$) using only differential pairs as amplifiers

Circuit Design on Plastic Foils

This book illustrates a variety of circuit designs on plastic foils and provides all the information needed to undertake successful designs in large-area electronics. The authors demonstrate architectural, circuit, layout, and device solutions and explain the reasons and the creative process behind each. Readers will learn how to keep under control large-area technologies and achieve robust, reliable circuit designs that can face the challenges imposed by low-cost low-temperature high-throughput manufacturing.

Features

► Discusses implications of problems associated with large-area electronics and compares them to standard silicon ► Provides the basis for understanding physics and modeling of disordered material ► Includes guidelines to quickly setup the basic CAD tools enabling efficient and reliable designs ► Illustrates practical solutions to cope with hard/soft faults, variability, mismatch, aging and bias stress at architecture, circuit, layout, and device levels

Modeling and Control of Greenhouse Crop Growth

A discussion of challenges related to the modeling and control of greenhouse crop growth, this book presents state-of-the-art answers to those challenges. The authors model the subsystems involved in successful greenhouse control using different techniques and show how the models obtained can be exploited for simulation or control design; they suggest ideas for the development of physical and/or black-box models for this purpose. Strategies for the control of climate- and irrigation-related variables are brought forward. The uses of PID control and feedforward compensators, both widely used in commercial tools, are summarized.

Features

► For the academic researcher: describes the state of the art in greenhouse control summarizing new solutions using advanced control techniques ► For the industrial food producer: advises improvements to software currently restricted to low-level climate and irrigation aspects of crop growth control ► For the practitioner: improvements in greenhouse management and crop growth are made plain by real results

Physics of Semiconductor Devices

This book describes the basic physics of semiconductors, including the hierarchy of transport models, and connects the theory with the functioning of actual semiconductor devices. Details are worked out carefully and derived from the basic physics, while keeping the internal coherence of the concepts and explaining various levels of approximation. Examples are based on silicon due to its industrial importance. Several chapters are included that provide the reader with the quantum-mechanical concepts necessary for understanding the transport properties of crystals.

Features

► Provides comprehensive guide for practitioners and beginners, describing the physics of semiconductors from fundamentals to applications ► Proceeds from first principles to description of actual devices' behavior ► Includes mathematical derivations and explicit calculations, without being wordy

Digital Holography and Wavefront Sensing

Principles, Techniques and Applications

This book presents a self-contained treatment of the principles and major applications of digital hologram recording and numerical reconstruction (Digital Holography). This second edition has been significantly revised and enlarged. The authors have extended the chapter on Digital Holographic Microscopy to incorporate new sections on particle sizing, particle image velocimetry and underwater holography. A new chapter now deals comprehensively and extensively with computational wave field sensing.

Features

► Offers a comprehensive introduction to modern applications of holography in the diverse areas of measurement and imaging ► Covers the profound developments and scale of applications to which digital holography, and in the wider context 3D imaging technologies in general, are now being routinely applied ► Considers now computational wave field sensing and digital holographic microscopy

Contents

Introduction.- Fundamental Principles of Holography.- Digital Holography.- Digital Holographic Interferometry (DHI).- Digital Holographic Particle Sizing and Microscopy.- Special Techniques.- Computational Wave Field Sensing.- Speckle Metrology.

Noise and Vibration in Friction Systems

The book analyzes the basic problems of oscillation processes and theoretical aspects of noise and vibration in friction systems. It presents generalized information available in literature data and results of the authors in vibroacoustics of friction joints, including car brakes and transmissions. The authors consider the main approaches to abatement of noise and vibration in non-stationary friction processes.

Features

► Discloses the role of self-oscillations in the generation of noise and vibration at friction
 ► Includes the development of frictional materials to minimize noise and vibration generated by brakes
 ► Summarizes investigations and tribological approaches to the problem of friction-induced noise and vibration

Contents

Introduction.- Oscillatory Processes and Vibration.- Acoustic Radiation, Sound Waves and Fields.- Methods of Analysis of Noise and Vibration Signals.- Friction-Excited Self-Oscillations.- Noise and Vibration in Nonstationary Friction Processes.- Materials Science Approaches to Abating Noise and Vibration in Nonstationary Friction Processes.- Physiological Aspects of Human Exposure to Noise and Vibration.- Conclusions.

Design of Switched-Capacitor Filter Circuits using Low Gain Amplifiers

This book describes the design of switched-capacitor filter circuits using low gain amplifiers and demonstrates some techniques that can minimize the effects of parasitic capacitances during the design phase. Focus is given in the design of low-pass and band-pass SC filters, and how higher order filters can be achieved using cascaded biquadratic filter sections. The authors also describe a low voltage implementation of a low-pass SC filter.

Features

► Discusses the design of switched capacitor filters in deep-submicron CMOS technologies
 ► Describes alternative topologies for switched capacitor filter circuits that use only low gain amplifiers
 ► Explains topologies and derives appropriate design procedures, which are validated through electrical simulation

Contents

Introduction.- Switched-Capacitor Circuits.- Low Pass Filter Topologies.- Band Pass Filter Topologies.- Non-Ideal Effects.- Switched Capacitor Filter Implementation.- Conclusion.

Fundamentals of Bioinformatics and Computational Biology

Methods and Exercises in MATLAB

This book offers comprehensive coverage of all the core topics of bioinformatics, and includes practical examples completed using the MATLAB bioinformatics toolbox™. It is primarily intended as a textbook for engineering and computer science students attending advanced undergraduate and graduate courses in bioinformatics and computational biology. The book develops bioinformatics concepts from the ground up, starting with an introductory chapter on molecular biology and genetics. This chapter will enable physical science students to fully understand and appreciate the ultimate goals of applying the principles of information technology to challenges in biological data management, sequence analysis, and systems biology. The first part of the book also includes a survey of existing biological databases, tools that have become essential in today's biotechnology research.

Features

► Clearly presents core bioinformatics principles with "hands-on" examples
 ► Illustrates the use of MATLAB bioinformatics toolbox™ for solving complex bioinformatics problems
 ► Synthesizes concepts in databases, machine learning, statistics and visualization for bioinformatics research
 ► Mainly written for computer scientists and engineers

Formal Specification Level

Concepts, Methods, and Algorithms

This book introduces a new level of abstraction that closes the gap between the textual specification of embedded systems and the executable model at the Electronic System Level (ESL). Readers will be enabled to operate at this new, Formal Specification Level (FSL), using models which not only allow significant verification tasks in this early stage of the design flow, but also can be extracted semi-automatically from the textual specification in an interactive manner. The authors explain how to use these verification tasks to check conceptual properties, e.g. whether requirements are in conflict, as well as dynamic behavior, in terms of execution traces.

Features

► Serves as a single-source reference to a new level of abstraction for embedded systems, known as the Formal Specification Level (FSL) ► Provides a variety of use cases which can be adapted to readers' specific design flows ► Includes a comprehensive illustration of Natural Language Processing (NLP) techniques, along with examples of how to implement and apply these techniques in the design of embedded systems

On Hierarchical Models for Visual Recognition and Learning of Objects, Scenes, and Activities

In many computer vision applications, objects have to be learned and recognized in images or image sequences. This book presents new probabilistic hierarchical models that allow an efficient representation of multiple objects of different categories, scales, rotations, and views. The idea is to exploit similarities between objects and object parts in order to share calculations and avoid redundant information. Furthermore inference approaches for fast and robust detection are presented.

Features

► Provides important basic concepts, efficient methods as well as practical "how-to" examples for the use of hierarchical graphical models ► Discusses the importance and the relationship between sharing and similarity of objects and object parts for efficient recognition and learning approaches ► Comprehensive survey of related work divided in categories such as part-based, compositional or biologically inspired models ► Includes a brief review of probabilistic graphical models

CMOS for Neural Prosthetics

The exponential advances in microfabrication coupled with our increased understanding of neural diseases enables the design of highly sophisticated, novel devices that benefit patients suffering from neurodegenerative diseases. This book provides a comprehensive treatment of CMOS circuits for neural prostheses and covers the basics of building CMOS electronic devices for stimulation and recording from neural systems. This book starts from the fundamentals of electrical neural stimulation and successively builds toward an implantable electronic device, while addressing the issues involved in designing such a device.

Features

- ▶ Outlines the basic processes of neural stimulation for a non-expert in the field
- ▶ Covers wireless power and data transfer, as well as low power VLSI techniques for implantable devices
- ▶ Shows readers to come up to speed quickly with the ability to build an implantable electronic device
- ▶ Provides single-source reference for material otherwise only available in disparate research publications

Waveform Analysis of Sound

What is this sound? What does that sound indicate? These are two questions frequently heard in daily conversation. Sound results from the vibrations of elastic media and in daily life provides informative signals of events happening in the surrounding environment. In interpreting auditory sensations, the human ear seems particularly good at extracting the signal signatures from sound waves. Although exploring auditory processing schemes may be beyond our capabilities, source signature analysis is a very attractive area in which signal-processing schemes can be developed using mathematical expressions. This book is inspired by such processing schemes and is oriented to signature analysis of waveforms.

Features

- ▶ - Helps readers who are not familiar with sound and vibration, with the recommendation that readers learn the basics of signal-processing theory
- ▶ - Requires a minimal mathematical background and includes many exercises
- ▶ - Describes a basic theory that explains detailed experimental data on sound and vibration

Contents

Introduction.- Discrete sequences and Fourier transform.- Temporal and spectral characteristics of discrete sequence.- Temporal and spectral enhancement by sound path.- Modulation and periodic properties of temporal envelope.- Transfer function of linear systems.- Sampling theorem and discrete Fourier transform.- Sinusoidal representation of sequence.- Modeling for zeros in complex time and frequency plane

Automated Guided Vehicle Systems

A Primer with Practical Applications

This primer is directed at experts and practitioners in intralogistics who are concerned with optimizing material flows. The presentation is comprehensive covering both, practical and theoretical aspects with a moderate degree of specialization, using clear and concise language. Areas of operation as well as technical standards of all relevant components and functions are described. Recent developments in technology and in the markets are taken into account. The goal of this book is to further stronger use of automated guided transport systems and the enhancement of their future performance.

Features

- ▶ Concise but comprehensive introduction
- ▶ Written for practitioners in diverse industrial branches
- ▶ Written by a practitioner

Recent Advances in Modeling Landslides and Debris Flows

This book consists of 20 chapters in which the authors deal with different theoretical and practical aspects of new trends in Collective Computational Intelligence techniques. Computational Collective Intelligence methods and algorithms are one of the current trending research topics from areas related to Artificial Intelligence, Soft Computing or Data Mining among others. Computational Collective Intelligence is a rapidly growing field that is most often understood as an AI sub-field dealing with soft computing methods which enable making group decisions and processing knowledge among autonomous units acting in distributed environments. Web-based Systems, Social Networks, and Multi-Agent Systems very often need these tools for working out consistent knowledge states, resolving conflicts and making decisions.

Features

► Recent advances in modeling landslides and debris flows ► Presents contributions to the workshop on Recent Developments in the Analysis, Monitoring and Forecast of Landslides and Debris Flow, held in Vienna, Austria, September 9, 2013 ► Covers a broad spectrum of topics from material behavior, physical modeling over numerical simulation to applications and case studies

Blind Source Separation

Dependent Component Analysis

This book provides readers a complete and self-contained set of knowledge about dependent source separation, including the latest development in this field. The book gives an overview on blind source separation where three promising blind separation techniques that can tackle mutually correlated sources are presented. The book further focuses on the non-negativity based methods, the time-frequency analysis based methods, and the pre-coding based methods, respectively.

Features

► First book addressing blind separation of mutually correlated sources ► Presents novel blind source separation algorithms that are applicable world applications ► Written by leading experts in the field

Deformation and Fracture of Solid-State Materials

Field Theoretical Approach and Engineering Applications

This volume introduces a comprehensive theory of deformation and fracture to engineers and applied scientists. Here “comprehensive” means that the theory can describe all stages of deformation from elastic to plastic and plastic to fracturing stage on the same basis (equations).

Features

► Describes a highly original way to reveal loading hysteresis of a given specimen ► Presents a fundamentally new approach to deformation and fracture, which offers potential to open new applications ► Introduces the unique application of Electric Speckle-Pattern Interferometry—reading fringe patterns to connect them to current deformation status ► Details engineering applications of gauge theory ► Visualizes otherwise abstract concepts of local symmetry and gauge field

Contents

Introduction.- Quick Review of Theories of Elastic Deformation.- Quick Review of Field Theories.- Field Theory of Deformation and Fracture.- Interpretations of Deformation and Fracture Phenomena from Field Theoretical Viewpoint.- Optical Interferometry and Application to Material Characterization.- Experimental Observations.- Applications.

Seismic Ground Response Analysis

This book presents state-of-the-art information on seismic ground response analysis, and is not only very valuable and useful for practitioners but also for researchers.

Features

► Includes numerous case studies illustrating earthquake response analysis ► Presents test data and empirical equations ► Comprehensive write-up for practical engineering

Contents

Propagation of earthquake waves in the ground and fundamentals of earthquake motion.- Introduction of seismic ground response analysis.- Input earthquake motions.- Fundamentals of soil mechanics.- In-situ soil testing.- Laboratory test and assemble of test result.- Estimation of mechanical soil properties.- Modeling of mechanical soil properties.- Equation of motion.- Equation of motion – spatial modeling.- Solution in time.- Evaluation of damping.- Evaluation of accuracy and earthquake motion indices.- Simulation of vertical arrays.- Effect of various factors from case studies.

Analysis and Design of Networked Control Systems

This monograph focuses on characterizing the stability and performance consequences of inserting limited-capacity communication networks within a control loop.

Features

► Demonstrates how the effect of incorporating a network within a control loop can be characterized as part of the control network design process ► Shows the reader how to establish stability conditions for lossy networks in terms of channel capacity and data rate ► Parallels control theory with information theory to show how topological entropy can be used to assist in control of multi-agent networks

Contents

From the Contents: Overview of Networked Control Systems.- Basics of Information, Communications and Control.- Data Rate Theorem for Stabilization of Linear Systems over Perfect Channels.- Data Rate Theorem for Stabilization of Linear Systems over Binary Erasure Channels.- Data Rate Theorem for Stabilization of Linear Systems over Gilbert–Elliott Channels.- Network Requirement for Stabilization of Linear Systems over Fading Channels.- Attainability of the Minimum Data Rate via Logarithmic Quantization.- Stabilization of Linear Systems via Logarithmic Quantization.

Multipath TCP for User Cooperation in Wireless Networks

This brief presents several enhancement modules to Multipath Transmission Control Protocol (MPTCP) in order to support stable and efficient multipath transmission with user cooperation in the Long Term Evolution (LTE) network. The text explains how these enhancements provide a stable aggregate throughput to the upper-layer applications; guarantee a steady goodput, which is the real application-layer perceived throughput; and ensure that the local traffic of the relays is not adversely affected when the relays are forwarding data for the destination. The performance of the proposed solutions is extensively evaluated using various scenarios. The simulation results demonstrate that the proposed modules can achieve a stable aggregate throughput and significantly improve the goodput by 1.5 times on average. The brief also shows that these extensions can well respect the local traffic of the relays and motivate the relay users to provide the relaying service.

Contents

Introduction.- User Cooperation and Multipath Transmission.- System Modelling.- Subset-sum Based Relay Selection (SSRS).- Adaptive Congestion Control (ACC).- Differentiated Packet Forwarding (DPF).- Bandwidth Sharing for User Cooperation.- Conclusions and Future Directions.

Partial Stabilization and Control of Distributed Parameter Systems with Elastic Elements

This monograph provides a rigorous treatment of problems related to partial asymptotic stability and controllability for models of flexible structures described by coupled nonlinear ordinary and partial differential equations or equations in abstract spaces. The text is self-contained, beginning with some basic results from the theory of continuous semigroups of operators in Banach spaces.

Features

► The first systematic study of the partial stabilization problem with infinite degrees of freedom important for the study of mechanical systems ► Control schemes allow the stabilization of flexible satellites and robot manipulators with non-collocated sensors and actuators ► Reduced models and spillover analysis provide the basis for a new characterization of reachable states of flexible structures

Contents

Basic Results from the Theory of Continuous Semigroups of Operator.- Partial Asymptotic Stability.- Stabilization of a Rotating Body with Euler-Bernoulli Beams.- Reachable Sets and Controllability Conditions.- Observer-Based Stabilization of a Manipulator Based on the Timoshenko Beam Model.- Control and Stabilization of a Rotating Kirchhoff Plate.- Appendices.

Improving Energy Decisions

Towards Better Scientific Policy Advice for a Safe and Secure Future Energy System

Managing a successful transition of the current energy supply system to less carbon emitting options, ensuring a safe and secure supply during the whole process and in the long term, is one of the largest challenges of our time.

Features

► Tackles ethical and social issues of the transition to a low-carbon energy system ► Guides through the various challenges of scientific advising to politics ► Creates awareness for conflicting interests, interdisciplinary and multi-factorial issues and pitfalls

Contents

Climate Change, Energy, Sustainability and Pavements

Climate change, energy production and consumption, and the need to improve the sustainability of all aspects of human activity are key inter-related issues for which solutions must be found and implemented quickly and efficiently. To be successfully implemented, solutions must recognize the rapidly changing socio-techno-political environment and multi-dimensional constraints presented by today's interconnected world.

Features

► Provides an integrated perspective on understanding the impacts of climate change, energy and sustainable development on transportation infrastructure systems ► Presents recent technological innovations and emerging concepts in the field of green and sustainable transportation infrastructure systems with a special focus on highway and airport pavements ► Written by leading experts in the field

Contents

From the Contents: Pavement Life Cycle Assessment.- Application of LCA Results to Network-level Highway Pavement Management.- The Product Process Service Life Cycle Assessment Framework to Estimate GHG Emissions for Highways.- Anticipating and Responding to Pavement Performance as Climate Changes.- Climate Change Scenarios and their potential effects on Transportation Infrastructure Systems.

Home Energy Information

Measuring and Managing Energy Consumption in Residential Buildings

The book contains the data required to measure and manage energy consumption in residential buildings. This book describes energy information in detail so that any homeowner can measure energy use on a continuing basis, make decisions regarding how to conserve energy, implement improvements, then monitor the results of those improvements. In the past, it has been difficult to collect residential energy consumption data in real-time. This book helps overcome that challenge by teaching readers how to use self-installed data collection devices that monitor consumption of circuits or appliances, along with freely available information to benchmark against other homes in the area.

Features

► Explains how to collect and analyze energy consumption data to guide home improvements that maximize efficiency ► Teaches readers about energy units of measure and formulas for benchmarking energy data ► Includes free, easy-to-use web tools that collect, store and analyze home energy data ► Introduces ideas on how renewable energy can help reduce energy costs

Contents

Introduction.- Units of Measure.- Measuring Energy Consumption.- Analysis.- Conserving Energy.- Monitoring Devices.- Renewable Energy Sources.- Conclusion.

Organic and Hybrid Solar Cells

This book delivers a comprehensive evaluation of organic and hybrid solar cells and identifies their fundamental principles and numerous applications. Great attention is given to the charge transport mechanism, donor and acceptor materials, interfacial materials, alternative electrodes, device engineering and physics, and device stability. The authors provide an industrial perspective on the future of photovoltaic technologies.

Features

► Describes the fundamental mechanism, materials properties, device engineering and lifetime stability of organic and hybrid solar cells ► Features an overview of organic and hybrid solar cells from an industrial perspective ► Offers both historical and cutting-edge examples of organic solar cell research

Contents

Introduction to Organic/Hybrid Solar Cells (OSC).- Charge Transport and Recombination in OSC.- Donor Materials for OSC.- N-type Electron Accepting Materials for OSC.- Interfacial Layers in OSC.- Alternative Electrodes for OSC.- Inverted Organic Solar Cells.- Stability of OSC.- Research Progress and Manufacturing Techniques for Large Area Polymer Solar Cells.- Hybrid Solar Cells.

Energy-Efficient HVAC Design

An Essential Guide for Sustainable Building

This book provides readers with essential knowledge enabling the successful design of today's new energy efficient HVAC systems. The author introduces important concepts such as Knowledge Categorization, Performance Based Design Standards, and Quantification of Uncertainty in Energy Modeling for Buildings. Pivotal topics that all HVAC and architectural engineers must master in order to navigate the green building renaissance are given focused attention, including the role of renewables, air quality, automatic controls, and thermal comfort. Relevant ASHRAE standards, as well as sustainability scoring systems such as BREEAM, HQE, LEED and CASBEE are explained in depth.

Features

► Provides practical guidance when energy savings are a main design focus ► Balances tried-and-true engineering concepts with cutting-edge techniques ► Includes in depth information on performance-based design standards and how to achieve them

Contents

A challenging task.- Integrated Design.- Categorizing Knowledge.- Frequently used Codes and Standards.- Performance Based Standards.- Indoor Air Quality.- Protective Design Practice.- HVAC Systems.- Building Automatic Controls.- Energy Modeling.- Sustainability and Energy Conservation Scoring Systems.- Renewable Energy & Sum-Zero Energy Building.- Uncertainty and Risk Management.

Impact of Climate Change on Small Scale Hydro-turbine Selections

Hydropower is found to be one of the most reliable and inexpensive options for renewable energy which was now widely been adopted by many countries to substitute fossil fuel sources. This Brief highlights the impact of climate change on hydropower plants, especially on the turbine design, as turbines are responsible for optimal conversion and regular energy production. The vulnerability of turbines is analyzed with the help of Artificial Neural Networks, followed by Multi Criteria Decision Making methods for development of intelligent indices to represent the level of vulnerability of turbines due to the change in climate.

Building Integrated Renewable Energy

Technical and Aesthetic Performance of Renewable Energy Systems on Buildings

Building Integrated Renewable Energy examines the current state of the art for building integrated renewable systems. It provides an overview of current and emerging technologies and provides a series of sections discussing specific technologies on buildings and the nature of both technical and visual integration; and provides a series of case studies of effective systems. Building Integrated Renewable Energy contextualises the debates around renewable energy systems on buildings, identifying different perspectives in relation to architectural design. It discusses current approaches and examines, through case studies, examples of successful technical and visual integration.

Features

► Includes illustrated case studies of both new-build and existing buildings ► Examines the current state of the art concerning the technical and aesthetic integration of renewable energy technologies on buildings ► Gives the reader an understanding of how renewable energy systems can be integrated on to buildings in ways that deliver both technical and visual performance

Contents

Context.- Building Integrated Wind Systems.- Wind Case Studies.- Overview of PV Systems and Types.- PV Case Studies.- Future Directions.- Conclusion, Summary of Discussion, Areas of Further Investigation.

Physics of the B Factories

This comprehensive work thoroughly introduces and reviews the set of results from Belle and BaBar - after more than two decades of independent and complementary work - all the way from the detectors and the analysis tools used, up to the physics results, and the interpretation of these results. The world's two giant B Factory collaborations, Belle at KEK and BaBar at SLAC, have successfully completed their main mission to discover and quantify CP violation in the decays of B mesons. CP violation is a necessary requirement to distinguish unambiguously between matter and antimatter. The shared primary objective of the two B Factory experiments was to determine the shape of the so-called unitarity triangle, an abstract triangle representing interactions of quarks, the elementary constituents of matter. The area of the triangle is a measure of the amount of CP violation associated with the weak force.

Contents

From the Contents: Part I The Facilities.- The B Factories.- The Detectors and Collaborations.- Data-taking and Monte Carlo Production summary.- Part II Tools and Methods.- Vertexing.- Analysis optimization.- Particle identification.- Flavor tagging.- Background discrimination.- Part III The Results and their Interpretation.- The CKM matrix and the Kobayashi-Maskawa mechanism.- B-physics.

Quantum Aspects of Black Holes

Beginning with an overview of the theory of black holes by the editor, this book presents a collection of ten chapters by leading physicists dealing with the variety of quantum mechanical and quantum gravitational effects pertinent to black holes.

Features

► An in depth look at the possible roles of quantum phenomena in black hole physics ► A substantial introduction by the editor integrates these different aspects into the larger picture of black holes ► Contributions by top physicists whose joint aim is the reconciliation of quantum mechanics and gravity

Contents

Fundamental Physics with Black Holes (Xavier Calmet).- Black holes and thermodynamics - The first half century (Daniel Grumiller, Robert McNees and Jakob Salzer).- The Firewall Phenomenon (R. B. Mann).- Monsters, Black holes and Entropy (Stephen D. H. Hsu).- Primordial Black Holes: sirens of the early Universe (Anne M. Green).- Self-gravitating Bose-Einstein condensates (Pierre-Henri Chavanis).- Quantum Amplitudes in Black-Hole Evaporation with Local Supersymmetry (P.D. D'Eath and A.N. St. J. Farley).- Hawking radiation from higher-dimensional black holes (Panagiota Kanti and Elizabeth Winstanley).- Black Holes at the Large Hadron Collider (Greg Landsberg).- Minimum length effects in black hole physics (Roberto Casadio, Octavian Micu, Piero Nicolini).

Einstein's Photoemission

Emission from Heavily-Doped Quantized Structures

This monograph solely investigates the Einstein's Photoemission (EP) from Heavily Doped (HD) Quantized Structures on the basis of newly formulated electron dispersion laws. The materials considered are quantized structures of HD non-linear optical, III-V, II-VI, Ge, Te, Platinum Antimonide, stressed materials, GaP, Gallium Antimonide, II-V, Bismuth Telluride together with various types of HD superlattices and their Quantized counterparts respectively. The EP in HD opto-electronic materials and their nanostructures is studied in the presence of strong light waves and intense electric fields that control the studies of such quantum effect devices.

Features

► Thorough discussion of the importance of measurement of band gap in optoelectronic materials ► Features 100 open research problems which form the integral part of the text ► Covers a wide range of different technologically important electronic compounds in detail

Contents

From the Contents: Part I Influence of Quantum Confinement on the EP from Non-Parabolic Semiconductors.- The EP from Quantum Wells (QWs) of Heavily Doped (HD) Non-Parabolic Semiconductors.- Part II The EP from HD III-V Semiconductors and Their Quantized Counter Parts.- The EP from HD Kane Type Semiconductors.

Solid Surfaces, Interfaces and Thin Films

This book emphasises both experimental and theoretical aspects of surface, interface and thin-film physics. As in previous editions the preparation of surfaces and thin films, their atomic and morphological structure, their vibronic and electronic properties as well as fundamentals of adsorption are treated.

Features

► Expanded and updated edition of a very successful textbook ► Places emphasis both on theory and experiment, up to latest developments, such as giant magnetoresistance and topological insulators ► Covers collective phenomena at interfaces, superconductivity, and magnetism ► Includes easy-to-follow mathematical derivations ► Expanded coverage includes topics such as the effect of spin-orbit coupling on surface states, plus well-established experimental techniques such as X-ray diffraction and reflection anisotropy spectroscopy

Contents

Surface and Interface Physics: Its Definition and Importance.- Preparation of Well-Defined Surfaces, Interfaces and Thin Films.- Morphology and Structure of Surfaces, Interfaces and Thin Films.- Scattering from Surfaces and Thin Films.- Surface Phonons.- Electronic Surface States.- Space-Charge Layers at Semiconductor Interfaces.- Metal-Semiconductor Junctions and Semiconductor Heterostructures.- Collective Phenomena at Interfaces: Superconductivity and Ferromagnetism.- Adsorption on Solid Surfaces.

Applications of Ionic Liquids in Polymer Science and Technology

This book summarizes the latest knowledge in the science and technology of ionic liquids and polymers in different areas. Ionic liquids (IL) are actively being investigated in polymer science and technology for a number of different applications. In the first part of the book the authors present the particular properties of ionic liquids as speciality solvents. The state-of-the art in the use of ionic liquids in polymer synthesis and modification reactions including polymer recycling is outlined.

Features

► Forms the first specialized book in the scientifically burgeoning area of ionic liquids and polymers ► Collects chapter contributions by international experts in their respective fields of ionic liquids and polymers ► Offers a comprehensive overview of the state of the art in this multidisciplinary area ► Addresses researchers and developers in both science and industry

Contents

Introduction Ionic Liquids and Polymers: Versatile Combination of Materials.- Poly(ionic Liquids).- Structurally controlled Polymeric Ionic Liquids and related Block Copolymers.- Ionic Liquids and Polymers as Stimuli Responsive Materials.- Ionic Liquids and Polymers in analytical environmental applications.- Ionic Liquids and Polymers in energy.- Ionic Liquids and Polymers in Nanomedicine.- Ionic Liquids and Polymers in Gas Separation.- Ionic Liquids as Polymer Additives.

Progress in Nanophotonics 3

This book focuses on the recent progress in nanophotonics technology to be used to develop novel nano-optical devices, fabrication technology and advanced systems. It reviews light-emitting diodes and lasers made of silicon bulk crystals in which the light emission principle is based on dressed-photon-phonons. Further topics include: theoretical studies of optoelectronic properties of molecular condensates for organic solar cells and light-emitting devices, the basics of topological light beams together with their important properties for laser spectroscopy, spatially localized modes emerging in nonlinear discrete dynamic systems and theoretical methods to explore the dynamics of nanoparticles by the light-induced force of tailored light fields under thermal fluctuations. These topics are reviewed by leading scientists. This overview is a valuable resource for engineers and scientists working in the field of nanophotonics.

Features

► Reviews recent work in optical nanotechnology to develop novel nano-optical devices ► Covers a wide range of topics from basic studies to applications of nanophotonics ► Written by leading scientists in the field

Stochastic Dynamics and Irreversibility

This textbook presents an exposition of stochastic dynamics and irreversibility. It comprises the principles of probability theory and the stochastic dynamics in continuous spaces, described by Langevin and Fokker-Planck equations, and in discrete spaces, described by Markov chains and master equations. Special concern is given to the study of irreversibility, both in systems that evolve to equilibrium and in nonequilibrium stationary states. Attention is also given to the study of models displaying phase transitions and critical phenomena both in thermodynamic equilibrium and out of equilibrium.

Features

► Equips readers with a detailed mathematical and theoretical framework suitable for in depth study of stochastic dynamics ► Carefully balanced, with detail and clarity, to enable fast progress ► Outreach to equilibrium and non-equilibrium thermodynamics

Contents

Random Variables.- Sequence of Independent Variables.- Langevin equation.- Fokker-Planck Equation I.- Fokker-Planck Equation II.- Markov Chains.- Master Equation I.- Master Equation II.- Phase Transitions and Criticality.- Reactive Systems.- Glauber Model.- Systems with Inversion Symmetry.- Systems with Absorbing States.- Population Dynamics.- Probabilistic Cellular automata.- Reaction-Diffusion Processes.- Random Sequential Adsorption.- Percolation.

Spectral Methods in Chemistry and Physics

Applications to Kinetic Theory and Quantum Mechanics

This book is a pedagogical presentation of the application of spectral and pseudospectral methods to kinetic theory and quantum mechanics. There are additional applications to astrophysics, engineering, biology and many other fields. The main objective of this book is to provide the basic concepts to enable the use of spectral and pseudospectral methods to solve problems in diverse fields of interest and to a wide audience.

Features

► The first book to describe spectral/pseudospectral methods applied to diverse applications in chemistry and physics ► Provides a unique demonstration of the overlap of the numerical treatment of problems in kinetic theory and quantum mechanics ► Illustrates methods that emphasize the use of non-classical basis sets

Contents

Preface.- Introduction to Spectral/Pseudospectral Methods.- Polynomial Basis functions and Quadratures.- Numerical Evaluation of Integrals and Derivatives.- Representation of Functions in Basis Sets.- Integral Equations in the Kinetic Theory of Gases and Related Topics.- Spectral and Pseudospectral Methods of Solution of the Fokker-Planck and Schrödinger Equations.- Index.

Theory of Gas Discharge Plasma

This book presents the theory of gas discharge plasmas in a didactical way. It explains the processes in gas discharge plasmas. A gas discharge plasma is an ionized gas which is supported by an external electric field. Therefore its parameters are determined by processes in it. The properties of a gas discharge plasma depend on its gas component, types of external fields, their geometry and regimes of gas discharge. Fundamentals of a gas discharge plasma include elementary, radiative and transport processes which are included in its kinetics influence. They are represented in this book together with the analysis of simple gas discharges. These general principles are applied to stationary gas discharge plasmas of helium and argon. The analysis of such plasmas under certain conditions is theoretically determined by numerical plasma parameters for given regimes and conditions.

Features

► Step-by-step explanation of the processes in gas discharge plasmas ► Covers processes and properties of helium and argon plasmas ► Provides useful relations for gas discharge plasmas

The Earliest Stages of Massive Clustered Star Formation

Fragmentation of Infrared Dark Clouds

This thesis presents an in-depth, high-resolution observational study on the very beginning of the formation process: the fragmentation of dense molecular clouds known as infrared dark clouds (IRDCs). Using the Submillimeter Array (SMA) and Very Large Array (VLA) radio interferometers, the author has discovered a common picture of hierarchical fragmentation that challenges some of the leading theoretical models and suggests a new, observation-driven understanding of how massive star formation in clustered environments may begin: it is initiated by the hierarchical fragmentation of a dense filament from 10 pc down to 0.01 pc, and the stellar mass buildup is simultaneously fed by hierarchical accretion at similar scales.

Features

► Nominated as an outstanding thesis by Peking University ► Presents the latest high angular resolution observational studies using the Submillimeter Array (SMA) and Very Large Array (VLA) ► Presents the discovery of a common hierarchical fragmentation in three infrared dark clouds ► Proposes a new scenario for the formation of massive star clusters

Graphene Oxide: Physics and Applications

This book gives a comprehensive overview of graphene oxides (GO) from atomic structures and fundamental properties to technological applications. Atomic structural models, electronic properties, mechanical properties, optical properties, and functionalizing and compositing of GO are illustrated. Moreover, the excellent physical and chemical properties offer GO promising applications in electronic nanodevices, chemical sensors and catalyst, energy storage, and biotechnology, which are also presented in this book. Therefore, this book is of interest to researchers in physics, chemistry, materials science, and nanoscience.

Features

► Covers experimental characterization and theoretical exploration of the structures and properties of GO ► Illustrates potential applications in electronics, optics, energy conversion and storage, environmental science, and biotechnology ► Can serve both as a reference work for researchers and a text for graduate students

Contents

Fabrication and reduction.- Structural characterization.- Structural modeling and physical properties.- Application of GO in electronics and optics.- Application of GO in energy conversion and storage.- Application of GO in environmental science.- Application of GO in biotechnology.- Conclusion and outlook.

Rolling Contact Fatigue in a Vacuum

Test Equipment and Coating Analysis

This book deals with wear and performance testing of thin solid film lubrication and hard coatings in an ultra-high vacuum (UHV), a process which enables rapid accumulation of stress cycles compared with testing in oil at atmospheric pressure.

Features

► Illustrates rolling contact fatigue testing in ultra-high vacuum ► Demonstrates testing at rotational speeds up to 7800 RPM without oil as a lubricant ► Explores process control using in situ plasma monitoring ► Elucidates controller optimization and hardware-in-the-loop testing applied to deposition processing ► Analyzes and explains investigative tools testing in ultra-high vacuum

Nanoparticles

Workhorses of Nanoscience

This book can be roughly divided into three parts: fundamental physico-chemical and physical principles of Nanoscience, chemistry and synthesis of nanoparticles, and techniques to study nanoparticles. The first chapter is concerned with the origin of the size dependence of the properties of nanomaterials, explaining it in terms of two fundamental nanoscale effects. This chapter also serves as a general introduction to the book, briefly addressing the definition and classification of nanomaterials and the techniques used to fabricate and study them. Chapter 2 lays out the theoretical framework within which to understand size effects on the properties of semiconductor nanocrystals, with particular emphasis on the quantum confinement effect.

Features

► Useful for graduate students with additional exercises ► Presents new potential applications of Nanomaterials ► Provides the essential background of the field

Contents

The Nanoscience Paradigm: "Size Matters!".- Size effects on semiconductor nanoparticles.- Metal nanoparticles for microscopy and spectroscopy.- Nanoporous materials and confined liquids.- Supported nanoparticles.- The challenge of colloidal nanoparticle synthesis.- Electron microscopy techniques.- Scanning probe microscopy and spectroscopy.- Electron paramagnetic resonance based spectroscopic techniques.- Solution NMR toolbox for colloidal nanoparticles.

Drug Delivery

Materials Design and Clinical Perspective

Current pharmaceutical and clinical approaches to the treatment of disease suffer from the inherent limitations in the specialization of drugs introduced to physiological systems. The interface of clinical and material sciences has allowed for a broad spectrum of creative approaches with the potential to alleviate these shortcomings. However, the synergy of these disciplines also presents problems in which nascent technology lacks the necessary evaluation within its intended clinical environment. Given the growing potential for materials science to address a number of unanswered therapeutic needs, it remains even more pressing to validate emerging drug delivery technologies in actual clinical environments.

Features

► Provides a comprehensive description of drug delivery systems from a materials perspective ► Includes a wide-ranging discussion of clinical applications of drug delivery systems ► Presents separate chapters on controlled release materials, thin film materials, self-microemulsifying materials, smart materials, etc ► Covers fundamental engineering principles, rational materials design, implementation testing, and clinical applications for each material type

Emerging Non-Volatile Memories

This book is an introduction to the fundamentals of emerging non-volatile memories and provides an overview of future trends in the field. Readers will find coverage of seven important memory technologies, including Ferroelectric Random Access Memory (FeRAM), Ferromagnetic RAM (FMRAM), Multiferroic RAM (MFRAM), Phase-Change Memories (PCM), Oxide-based Resistive RAM (RRAM), Probe Storage, and Polymer Memories. Chapters are structured to reflect diffusions and clashes between different topics. Emerging Non-Volatile Memories is an ideal book for graduate students, faculty, and professionals working in the area of non-volatile memory.

Features

► Provides an overview of non-volatile memory fundamentals ► Covers key memory technologies ► Written by experts from both academia and industry

Contents

Part I: Ferroic Memories.- Review of the Science and Technology for Low and High-density Non-volatile Ferroelectric Memories.- Hybrid CMOS/magnetic memories (MRAM) and logic circuits.- Emerging Multi-Ferroic Memories.- Part II: Resistance and Phase Change Memories.- Phase-Change Materials for Data Storage Applications.- Emerging Oxide Resistance Change Memories.- Oxide based memristive nanodevices.- Part III: Probe Memories.- Ferroelectric Probe Storage Devices.

Micro and Nanophotonics for Semiconductor Infrared Detectors

Towards an Ultimate Uncooled Device

The advent of microelectromechanic system (MEMS) technologies and nanotechnologies has resulted in a multitude of structures and devices with ultra compact dimensions and with vastly enhanced or even completely novel properties.

Features

► Addresses the "holy grail of detector design": the seemingly simple task of fabricating uncooled infrared detectors with background-limited operation ► Presents the up-to-date research from the field of modern micro and nano photonics ► Treats the applications for infrared detectors systematically

Contents

From the Contents: Part I Introduction- A Path to an Ideal Photonic Detector.- Infrared Detector Performance and Main Figures of Merit.- Classification of IR Detectors.- Part II Photon Management.- Nonimaging and Imaging Optical Concentrators.- Refractive Concentrators.- Part III Charge Carrier Management (Thermal Noise Engineering).- Nonequilibrium Suppression of Auger Generation-Recombination.- Limits of Nonequilibrium Detector Operation.

Composite Synthetic Scaffolds for Tissue Engineering and Regenerative Medicine

This book addresses important biomaterials which are commonly used to fabricate scaffolds and it describes two major protocols employed in scaffold fabrication. Tissue engineering or regenerative medicine aims at restoring ex-novo tissues and organs whose functionality has been compromised as a consequence of diseases or traumatic events. The innovative concept underlying tissue engineering is the use of autologous cells, obtained from a biopsy of the patient. Cells are seeded on a porous scaffold which has the role of supporting and guiding cells towards the development of tissue-like structures as well as providing a platform for the delivery under controlled condition of growth factor release, etc. The successful manufacture of scaffolds for tissue engineering applications is crucial. In this book, these biomaterials are discussed.

Features

► Offers two major protocols employed in scaffold fabrication ► Addresses important biomaterials which are commonly used to fabricate scaffolds ► Covers illustrated examples, structure and properties of scaffolds, cellular interactions and drug delivery

Contents

Scaffolding Biomaterials.- Scaffold Fabrication Protocols.- Fabrication of Polymer and Composite Scaffolds using Electrospinning Techniques.- Fabrication of Polymer and Composite scaffolds using Thermally Induced Phase Separation Technique.

Metallic Nanostructures

From Controlled Synthesis to Applications

This book details the design for creation of metal nanomaterials with optimal functionality for specific applications. The authors describe how to make desired metal nanomaterials in a wet lab. They include an overview of applications metal nanomaterials can be implemented in and address the fundamentals in the controlled synthesis of metal nanostructures.

Features

► Explains the design specifications of metal nanostructures for various applications in electronics, biomedicine, SERS, as well as catalytic and electrocatalytic applications ► Introduces current research trends for each subfield of metal nanomaterials ► Includes numerous images of metallic nanostructures and their applications

Contents

Metallic Nanostructures: Fundamentals.- Controlled Synthesis: Nucleation and Growth in Solution.- Bimetallic Nanocrystals: Growth Models and Controlled Synthesis.- Interactions of Metallic Nanocrystals with Small Molecules.- Plasmonic Nanostructures for Biomedical and Sensing Applications.- Magnetic Metallic Nanostructures for Biological Applications.- Metallic Nanostructures for Electrocatalysis.- Metallic Nanostructures for Catalytic Applications.- Metallic Nanostructures for Electronics and Optoelectronics.

Refractories for Aluminium

Electrolysis and the Cast House

This book details the peculiarities of the requirements for refractories designed for aluminium metallurgical process: reduction, cast house, and anode production. The author describes requirements specific to the properties and structure of refractory materials that differentiate it from the refractories for ferrous metallurgy and other refractories. A comparison is drawn between the properties and structure of refractories and carbon cathode materials from different points of view: from the point of physical chemistry and chemistry interactions during the metallurgical process and from the point of design of reduction pots and furnaces with the aspect to the service life time of metallurgical aggregates.

Features

► Reveals the peculiarities of physical chemistry in aluminium production ► Summarizes specific requirements for the properties and structure of refractory materials ► Addresses contradictory concepts on lining of reduction cells - thermal balance and good refractory materials

Contents

Preface.- Glossary.- The properties of refractory and heat insulation materials.- Refractories and carbon cathode materials for aluminum reduction cells.- Refractories and heat insulation materials for the cast house.- Refractories for the anode baking furnaces.

Water Quality Management

Assessment and Interpretation

Considering the significance of water quality for drinking, irrigation and industry, availability of accurate and sufficient water quality data is necessary and having enough data without proper interpretation is not helpful for water quality management decisions. Hence, analysis of the existing data and prediction of future of water quality is vital. The current volume first defines the importance of water quality parameters regarding public health and irrigation. Secondly, the climatic situation and hydrological cycle of the area is considered for interpretation of the data. Various methodologies such as Box-Jenkins time series analysis, water quality indices, artificial neural networks and principal component analysis are described and applied to actual data for different environmental conditions such as arid, semi-arid and mountainous areas. This book is a user manual for students and professionals involved in water quality planning and management.

Features

► Special focus on availability of accurate and sufficient water quality data, particularly in view of water quality management decisions ► Outlook on importance of water quality parameters regarding public health and irrigation whilst taking into account the climatic situation and hydrological cycle of the area for data interpretation ► Description of various methodologies such as Box-Jenkins time series analysis, water quality indices, artificial neural networks and principal component analysis ► Valuable ideas on water quality planning and management

Estuarine Morphodynamics of the Sunderbans

This book is the outcome of rigorous and continuous research work done by the author over about three decades on the open ecosystem and dynamic environment of the estuarine Sunderbans. The objective of this work is to identify the field and factors changing gradually upon this active delta over the years, decades and centuries. The deltaic Sunderbans yet not mature enough, has been changing in its natural course with time. Further, anthropogenic interferences disturb the environments and accelerate degradation of nature of this fragile ecosystem simultaneously. Roles played by almost all the agents including man and environment and their involvement are identified for the changing environmental scenario of the Sunderbans. The book is befitting for the researchers and students for the post graduate levels.

Features

► Uniquely fuses coastal and estuarine studies, environmental sciences and earth sciences ► Of interest to a wide audience of researchers and post graduate students ► Contains a rich resource of unpublished data, examples and illustrations

Contents

Sunderbans: Physical Aspects and Configurations.- River Systems and Tidal Courses.- Brackish Water.- Substrate Soils.- Coastal Morpho-Dynamics.- Granulometry of Mangrove Sediments.- Estuarine and Coastal Erosions.- Floral Diversity.- Mangrove Ecosystems.- Anthropogenic Interferences.- Changing Environmental Scenario.

Landscapes and Landforms of Colombia

The book contains a short description of Colombia's geological evolution and present landscapes, followed by systematic descriptions of 17 geomorphosites, selected from scientific and aesthetic points of view. The large climatic and topographic diversity which characterises Colombia permits a broad variety of landscapes, including coastal features, mud volcanoes and desertic geomorphs, snow covered peaks and active volcanoes, deeply incised canyons and forming subdesertic valleys and lake located up to 3000 m above sea level. The book reflects the intent to contribute to the knowledge of a country which has often been left apart from traditional touristic guides.

Features

► The book covers the most important and relevant landscapes of Colombian geomorphology ► It provides easily accessible and up-to-date information about Colombian geomorphology, and is a useful tool for students, researchers and non-geomorphologists ► The clear and layman language style employed and quality illustrations (e.g. coloured maps, aerial photos, and photos) should make it attractive to a general audience as well

Thermo-Hydro-Mechanical-Chemical Processes in Fractured Porous Media: Modelling and Benchmarking

Closed-Form Solutions

The present book provides guidance to understanding complicated coupled processes based on the experimental data available and implementation of developed algorithms in numerical codes. Results of selected test cases in the fields of closed-form solutions (e.g., deformation processes), single processes (such as groundwater flow) as well as coupled processes are presented. It is part of the OpenGeoSys initiative - an open source project to share knowledge and experience in environmental analysis and scientific computation with the community.

Food Waste and Sustainable Food Waste Management in the Baltic Sea Region

This work presents the findings of an extensive study on the state-of-the-art regarding the problem of food waste in Belarus, Estonia, Germany, Latvia, Lithuania, Poland and Sweden. The results show that the problem of food waste can be found at different levels in each country and that our knowledge of it is limited by the current lack of studies in the area.

Features

► A unique overview on amounts of food waste generation in the Baltic Sea Region countries ► Country statistics on food waste generation, available for the first time and resulting from 6 months research ► A chapter on applied methods of food waste treatment in the Baltic Sea Region countries

Contents

Introduction.- Literature Review.- Causes of food waste generation.- Methods of food waste reduction.- Research Methods.- Overview of the Baltic Region countries.- The state-of-the-art of the problem of food waste in the Baltic Region countries.- Discussion.- Conclusions and Recommendations.- Appendix A.- Appendix B.- Glossary.- References.

The Twin Sister Planets Venus and Earth

Why are they so different?

This book explains how it came to be that Venus and Earth, while very similar in chemical composition, zonation, size and heliocentric distance from the Sun, are very different in surface environmental conditions. It is argued here that these differences can be accounted for by planetoid capture processes and the subsequent evolution of the planet-satellite system.

Features

► A comprehensive model for the evolution the planet Earth and Venus over Geologic Time ► Offers a new approach to the intact capture model ► Contains proposed tests of the models presented ► Has many significant implications for the argument that habitable planets may be fairly rare in a large region of space

Contents

Climate of the Romanian Carpathians

Variability and Trends

This book is a comprehensive climatic monograph, which addresses one of the most complex mountain environments in Europe, the Carpathians Chain, focusing on the branches that lie over Romania. The volume aggregates high quality input data, state-of-the-art techniques, regional analysis and overview perspectives, while addressing the spatial and temporal patterns of the main climatic elements. The study covers the period 1961-2010, for the present climate, while the perspective is extended up to 2050. The main climatic elements (e.g.

Features

► Presents the spatial distribution patterns of some key climatic variables subject to the vertical climatic zonation ► Reviews the observed climatic trends at above 1,000 m altitude ► Assesses the future climate change signals and associated climate extremes from the mid-term (2050) regional climate simulations

Contents

Contents: Theoretical background.- Study area.- Data.- Methods.- Geographical and synoptic control of the climate.- Regional climatic patterns.- Observed variability trends from instrumental records.- Changing climate extremes in the last five decades.- Projections of future changes in climate of the Romanian Carpathians.- Conclusions.- Index.

Blue Carbon Reservoir of the Blue Planet

The ever increasing emission of carbon dioxide due to rapid industrialization, urbanization, unplanned tourism and alteration of land use pattern is causing unprecedented changes to marine biodiversity. Irrespective of political philosophy, nation, caste, sex and religion, mankind is under the appalling shadow of climate change. Today nature-based approaches for the mitigation of climate change are increasingly accepted as part of the low-cost solution.

Features

► The present book is the first of its kind to scan critically the stored and sequestered carbon in coastal life forms and covers the following components ► Evaluation of the role of coastal biotic communities in mitigating rising carbon dioxide level 30 years research data on carbon sequestration and storage by coastal vegetation ► Emphasis on role of phytoplankton in carbon sequestration, carbon storage in coral reef ecosystem & molluscan community as a potential sink of carbon

Earthquake Source Physics on Various Scales

Earthquake rupture is a process of remarkable complexity. Over the past few decades, scientists have become aware of its high variability on all scales as well as its wide dynamic range. At the same time, a thorough understanding of the seismic source process is a key element of reliable earthquake ground motion prediction. The present book contains a comprehensive collection of contributions originating from the 2012 ECGS Workshop Earthquake Source Physics on Various Scales, held in Luxembourg. The seventeen articles in this volume cover theoretical and observational aspects of the earthquake source process, ranging from tiny, laboratory-generated M -6 events to the source complexity and radiated energy of the world's greatest earthquakes.

Features

► Most up-to-date treatise compiling state-of-the-art studies of the earthquake source process ► Covers all scales from laboratory experiments to megathrust earthquakes ► Provides the basis for a continuation of fruitful discussions on earthquake source scaling and its implications for a variety of applications, on seismic hazard, general source physics and the link between the laboratory and "real life" faulting

Tsunamis in the Pacific Ocean: 2011-2012

The 2011 Tohoku earthquake generated a catastrophic tsunami that killed nearly 20,000 people along the coast of Japan and caused the nuclear disaster at the Fukushima Daiichi Nuclear Power Plant. The tsunami propagated throughout the Pacific Ocean and affected many other countries, including Russia, the USA, New Zealand, French Polynesia and Chile. This event once again demonstrated the terrible threat of tsunami waves for Pacific countries and the necessity of basin wide international scientific collaboration. This volume contains an introduction and 21 scientific papers, including 12 papers on aspects of the 2011 Tohoku event. The papers report detailed field survey results on the coasts of Japan and Russia, wave dynamics based on these surveys, source mechanism of the earthquake and far-field impacts of the Tohoku tsunami. Other papers report on 2012 tsunamis in El Salvador, the Philippines, off the east coast of Honshu and the landmark Haida Gwaii event off the west coast of British Columbia, Canada. A final set of papers discusses some remaining challenging questions in tsunami science and warning.

Microbial Degradation of Synthetic Dyes in Wastewaters

Today synthetic dyes are used extensively in the textile dyeing, paper printing, color photography, pharmaceuticals, food and drink, cosmetic and leather industries. As of now, over 100,000 different dyes are available, with an annual production of over 700,000 metric tons. These industries discharge an enormous amount of colored effluents into natural water bodies, with or without treatment. The textile industry alone discharges 280,000 tons of dyes every year, making it the largest contributor to colored effluent discharge. Although a variety of treatment technologies are available, including adsorption, chemical oxidation, precipitation, coagulation, filtration electrolysis and photodegradation, biological and microbiological methods employing activated sludge, pure cultures, microbial consortia and degradative enzymes are economically viable, effective and environmentally responsible options.

Features

► Covers latest state of the art on the microbial degradation ► Has focused on biodegradation of synthetic dyes in waste waters ► Illustrates the bio-degradative pathways of synthetic dyes

Contents

From the Contents: Mycoremediation of Synthetic Dyes: An insight into the Mechanism, Process Optimization and Reactor Design.- Bacterial Enzymes and Multi-Enzymatic Systems for Cleaning-up Dyes from the Environment.- Bacterial Degradation of Azo Dye Containing Wastes.- Microbial Degradation of Basic Dyes in Wastewaters.

Impact of Climate Change and Human Activity on the Environment

An Analysis of the Xisha Islands

This study describes the fundamentals of assessing the vulnerability of coral islands, as well as environmental management and resource exploitation. Using seabird subfossils, such as bones, guano, eggshells etc., which have been well preserved on the Xisha Islands in the South China Sea, the author identifies the influences of climate change and human activity on seabird populations and diets.

Features

▶ Nominated by University of Science and Technology of China as an outstanding Ph.D. thesis ▶ Establishes a development mode of coral island ecosystem ▶ Reconstructs a 2000-year record of seabird population and their diet ▶ Identify potential impacts of climate change and human activity on ecosystems

Contents

Introduction.- Research contents and methodology.- Study area and sample collection.- Chronology.- Geochemical evidence for the development of coral island ecosystem in the Xisha archipelago of the South China Sea.- A 2200-year record of seabird population on Ganquan Island, South China Sea.- Isotopic evidence for seabird diet changes over the past 2000 years in the Xisha Islands.- Evidence of human activities from the ornithogenic sediments of the Xisha Islands.- A preliminary study of ancient DNA in guano subfossils from the Xisha Islands.- Conclusions.

Progress in Location-Based Services 2014

This book presents a general picture of recent research activities related to location-based services. Such activities emerged in the last years especially concerning issues of outdoor/indoor positioning, smart environment, spatial modelling, personalization and context-awareness, cartographic communication, novel user interfaces, crowdsourcing, social media, big data analysis, usability and privacy. This book is comprised of a selection of the best papers presented during the 11th International Symposium on Location Based Services, which was held in Vienna (Austria) between 26th and 28th November 2014.

Features

► The LBS conference associated with this book has a long tradition in this field and is the only international event of this kind ► This book is of interest for various disciplines due to the interdisciplinary content ► As successor of the former Springer books on LBS (LBS, LBS II, Advances in LBS, Progress in LBS), this book completes the series

Computational Approaches for Urban Environments

This book aims to promote the synergistic usage of advanced computational methodologies in close relationship to geospatial information across cities of different scales. A rich collection of chapters subsumes current research frontiers originating from disciplines such as geography, urban planning, computer science, statistics, geographic information science, and remote sensing. The topics covered in the book are of interest to researchers, postgraduates, practitioners, and professionals. The editors hope that the scientific outcome of this book will stimulate future urban-related international and interdisciplinary research, bringing us closer to the vision of a "new science of cities."

Features

► Presents current and innovative technological developments reflecting urban environments ► Includes cutting-edge methods and data (e.g., cell-phone data) for urban analyses ► Will stimulate international research networks and enrich geographical science

Geoinformatics for Intelligent Transportation

The aim of the book is to present and discuss new methods, issues and challenges involved in geoinformatics' contribution to making transportation more intelligent, efficient and human-friendly. It covers a wide range of topics related to transportation and geoinformatics. The themes are divided into four main sections: Transport modeling, Sensor data and services, Intelligent transport systems, and Transport planning and accessibility.

Features

► Presents the latest research achievements in the area of geoinformatics and transportation ► Multidisciplinary focus ► Combination of theoretical papers and applications

Environmental Indicators

Environmental indicators are the first line of warning against hazards caused by humans or nature catastrophes to prevent diseases and death of living organisms. The present book covers a large variety of environmental indicators from physical-chemistry through economical, bioinformatics, electromagnetic irradiation and health aspects, all dealing with environmental pollution.

Features

► Covers a large variety of environmental indicators from physical-chemistry through economical, bioinformatics, electromagnetic irradiation and health aspects ► Broadens the understanding of dealing with environmental pollution ► Maximizes insights into environmental indicators of for example the environmental burden of disease, indoor air quality, ocean acidification, land use changes, biological urbanization, dry land and more

Management of Pulp and Paper Mill Waste

Pulp and paper mill industries are always associated with the disposal problem of highly contaminated sludge or bio-solids. The development of innovative systems to maximize recovery of useful materials and/or energy in a sustainable way has become necessary. The management of wastes, in particular of industrial waste, in an economically and environmentally acceptable manner is one of the most critical issues facing modern industry, mainly due to the increased difficulties in properly locating disposal works and complying with even more stringent environmental quality requirements imposed by legislation.

Features

► Provides thorough and in-depth coverage of the management/utilization of paper mill sludge ► Cites pertinent research and is of interest to those working in this area or intending to do so ► Discusses methods for conversion of paper mill sludge into valuable products ► Discusses emerging technologies for the treatment/utilization of paper mill sludge ► Presents state-of-the-art waste reduction techniques employed in the pulp and paper industry worldwide

Contents

1. General Introduction.- 2. Generation of Waste in Pulp and Paper Mills.- 3. Composition of Waste.- 4. Sludge Dewatering.- 5. New Technologies for energy recovery from waste.- 6. Options for Utilization of Waste.- 7. Examples of Pulp and Paper Mill Waste Implementation.- 8. Future Prospects.

The Controversy over Marine Protected Areas

Science meets Policy

This book is a critical analysis of the concept of marine protected areas (MPAs) particularly as a tool for marine resource management. It explains the reasons for the extraordinary rise of MPAs to the top of the political agenda for marine policy, and evaluates the scientific credentials for the unprecedented popularity of this management option.

Features

► Critical analysis of the concept of marine protected areas (MPAs) as a tool for marine resources management ► Explores the science-policy interface through the scientific discourse surrounding MPAs ► Offers a review of the literature on MPAs

Contents

Chapter One: Introduction.- Chapter Two: The Rise and Rise of the Marine Reserves 'Bandwagon.- Chapter Three: Bibliometric Test of the MR 'Bandwagon'.- Chapter Four: Bias in the Peer-Reviewed Literature, and Crossing the Science/Policy Divide.- Chapter Five: Critique of the Scientific Evidence for Fisheries Benefits of MRs.- Chapter Six: Case study of the 'English Patient'.- Chapter Seven: Conclusion.

Critical Loads and Dynamic Risk Assessments

Nitrogen, Acidity and Metals in Terrestrial and Aquatic Ecosystems

This book provides a unique overview of research methods over the past 25 years assessing critical loads and temporal effects of the deposition of air pollutants. It includes critical load methods and applications addressing acidification, eutrophication and heavy metal pollution of terrestrial and aquatic ecosystems.

Features

► Unique complete overview of research methods assessing critical loads and dynamic risk assessments of air pollutants ► Addresses all relevant air pollutant impacts, i.e. acidification, eutrophication and metal pollution ► Includes most recent developments including risks on soil and water chemistry and on biodiversity under climate change

Contents

Part I Assessment of indicators for air pollutant impacts.- Part II Empirical and model based critical loads and target loads.- Part III Dynamic modeling for the assessment of air pollution impacts at site scale.- Part IV Critical loads and dynamic model applications on a regional scale.- Part V Integrated assessment policy applications and synthesis.

China's Grain for Green Program

A Review of the Largest Ecological Restoration and Rural Development Program in the World

This book provides a comprehensive review of Grain for Green, China's nationwide program which pays farmers to revert sloping or marginal farm land to trees or grass.

Features

► Presents the first multidisciplinary examination of the Grain for Green program ► Offers an integrated approach linking social, economic, institutional, and ecological factors ► Reviews and analyzes the ecological and socio-economic consequences of Grain for Green, as well as the program's sustainability

Contents

Part 1: Why the Grain for Green program?.- Chapter 1 Management of forest resources from 1949 to 1998.- Chapter 2 China's reforestation and rural development programs.- Part 2: Overview of the Grain for Green program.- Chapter 3 Program timeline.- Chapter 4 Farmers' compensation.- Chapter 5 Land selection.- Chapter 6 Plant selection.- Chapter 7 Household selection, participation and attitudes.- Chapter 8 Planning and implementation.- Part 3: The impact of the Grain for Green program.- Chapter 9 Ecological and environmental impact.- Chapter 10 Impact on grain market and price.- Chapter 11 Participants' income levels.- Chapter 12 Labor force redistribution.- Chapter 13 Sustainability of the Grain for Green program.- References.

Global Drinking Water Management and Conservation

Optimal Decision-Making

This book discusses different drinking water treatment technologies and what contaminants each treatment method can remove, and at what costs. The production of drinking water requires adequate management. This book attempts to fill the existing knowledge gap about (a) water treatment technologies and their costs, (b) risk assessment methods, (c) adverse health effects of chemical contaminants, (d) management protocols, and varying regulatory practices in different jurisdictions, and what successes are possible even with small financial outlays. Addressing water consulting engineers, politicians, water managers, ecosystem and environmental activists, and water policy researchers, and being clearly structured through a division in four parts, this book considers theoretical aspects, technologies, chemical contaminants and their possible elimination, and illustrates all aspects in selected international case studies.

Features

► Fills knowledge gaps about water treatment technologies and their costs, risk assessment methods, adverse health effects of chemical contamination, and management protocols ► Suggests improvements for the management of risks and financial viability of the treatment infrastructure, for a better and more healthy drinking water supply for all ► Offers a comparative classification of water treatment technologies and what contaminants they can remove

Study on Climate Change in Southwestern China

This thesis confirms many changes, including sharp temperature rise, interannual variability of precipitation, extreme climate events and significant decreases of sunshine duration and wind speed in southwestern China, and systemically explores the action mechanism between large-scale atmospheric circulation systems, the complicated topography, human activities and regional climate changes. This study also analyzes the response of glaciers to climate change so that on the one hand it clearly reflects the relationship between glacier morphologic changes and climate change; on the other, it reveals the mechanism of action of climate warming as a balance between energy and matter. The achievements of this study reflect a significant contribution to the body of research on the response of climate in cold regions, glaciers and human activities to a global change against the background of the typical monsoon climate, and have provided scientific basis for predictions, countermeasures against disasters from extreme weather, utilization of water and the establishment of counterplans to slow and adapt to climate change.

Features

► Nominated by Chinese Academy of Sciences as an outstanding Ph.D. thesis ► Offers a needed exploration of the temporal and spatial pattern of climate change in southwestern China ► Explores the action mechanism among the large-scale atmospheric circulation system, the complicated topography, human activities and regional climate changes ► Analyzes the response of glaciers to climate change from the aspects of morphology of the glacier, glacial mass balance and the process of hydrology

CO₂ Sequestration, Biofuels and Depollution

Water is the driving force of all nature. This old quote from Leonardo da Vinci remind us that without water life is simply not possible. As a consequence, water is probably the most important wealth for humanity.

Features

► Broadens the understanding of pollutants in drinking water, and their remediation ► Maximizes reader insights into greenhouse gas CO₂ emission and sequestration ► Among other topics looks at biofuels from plant and algae, biosafety risk of genetically modified crops, chlorine for water disinfection, foundry air pollution and more

Contents

1. Chlorine for water disinfection: properties, applications and health effects.- 2. Greenhouse gas from organic waste composting: emissions and measurement.- 3. CO₂ photocatalytic reduction: photocatalyst choice and product selectivity.- 4. Fluoride in drinking water: health effects and remediation.- 5. Selenium in agriculture. Water, air, soil, plants, food, animals and nanoselenium.- 6. Biofuels: bioethanol, biodiesel, biogas, biohydrogen from plants and microalgae.- 7. Digestion tests to measure heavy metal bioavailability in soils.- 8. Biosafety risk of genetically modified crops containing Cry genes.- 9. Foundry air pollution: hazards, measurements and control.- 10. Lignolytic enzymes for water depollution, coal breakdown, and paper industry.

Reviews of Environmental Contamination and Toxicology

Volume 235

Reviews of Environmental Contamination and Toxicology attempts to provide concise, critical reviews of timely advances, philosophy and significant areas of accomplished or needed endeavor in the total field of xenobiotics, in any segment of the environment, as well as toxicological implications.

Features

► Provides detailed reviews worldwide to key scientists and science or policy administrators
 ► Supplies scientific review articles on all aspects of environmental contamination and associated toxicological consequences
 ► Facilitates the task of accessing and interpreting cogent scientific data within closely related research fields

Contents

1. Factors Influencing the Toxicity, Detoxification and Biotransformation of Paralytic Shellfish Toxins.- 2. Sources, Fluxes, and Biogeochemical Cycling of Silver in the Oceans.- 3. DDT, Chlordane, Toxaphene and PCB Residues in Newport Bay and Watershed: Assessment of Hazard to Wildlife and Human Health.

Fossil Matter in the Geosphere

The first volume in this new text book series covers comprehensively relevant aspects related to the appearance and characterisation of fossil matter in the geosphere such as kerogen, oil, shales and coals. As organic geochemistry is a modern scientific subject characterized by a high transdisciplinarity and located at the edge of chemistry, environmental sciences, geology and biology, there clearly is a need for a flexible offer of appropriate academic teaching material on an undergraduate level addressed to the variety of students coming originally from different study disciplines. For such a flexible usage this textbook series' consists of different volumes with clear defined aspects and with manageable length.

Features

► Presents an overview on the diversity and properties of fossil material on earth
 ► Focuses on principal aspects about origin and transformation of organic matter in geosphere
 ► Looks at the most important forms of fossil organic matter
 ► Marries the disciplines chemistry and geology

Contents

1. Origin and transformations of organic matter in geosphere.- 2. Main types of organic matter in geosphere.- 3. Minerals in sediments and their impact on the changes of organic substances in geosphere.- 4. Coals.- 5. Oil shales.

Institutional Arrangements for Conservation, Development and Tourism in Eastern and Southern Africa

A Dynamic Perspective

Contents

Preface.- Chapter 1. Novel institutional arrangements for tourism, conservation and development in eastern and southern Africa.- Chapter 2. From exploitation to ownership: Wildlife-based tourism and communal area conservancies in Namibia.- Chapter 3. The Tiseb conservancy: how communities, the state and the market struggle for its success.- Chapter 4. Community-based natural resource management in Botswana.- Chapter 5. Community Empowerment through Community-based Tourism: The Case of Chobe Enclave Conservation Trust in Botswana.- Chapter 6. Private game reserves in Southern Africa.- Chapter 7. False legitimacies: The rhetoric of economic opportunities in the expansion of conservation areas in southern Africa.- Chapter 8. Hunting for conservation? The re-introduction of sport hunting in Uganda examined.- Chapter 9. The evolution and progression of Transfrontier Conservation Areas in the Southern African Development Community.- Chapter 10. The Selous-Niassa Transfrontier Conservation Area and Tourism: Evolution, Benefits and Challenges.- Chapter 11. Promoting conservation tourism: The case of the African Wildlife Foundation's tourism conservation enterprises in Kenya. [...]

Family Urban Agriculture in Russia

Lessons and Prospects

The book results from research carried out by the authors since 1999 on urban gardening collectives in Russia, then from the extension of this research towards collective urban gardening in France, with some investigations in other European Union Member States and Brazil. This research was carried out within the framework of Kazan University (currently, the Institute of Administration and Territorial Development of the Federal University of Kazan) and the French National Institute for Agricultural Research (INRA).

Contents

Notice.- Preamble: Heal the World.- Chapter I. Introduction.- Chapter II. The palimpsest of urban gardening in Russia.- Chapter III. A new civil right won under the Soviet regime.- Chapter IV. A post-Soviet phenomenon.- Chapter V. The Russian Urban Grower: representations and practices.- Chapter VI. In favour of a new perspective.- Chapter VII. A continental rhizome: gardening policies and visions of society.- Chapter VIII. Western and Southern Europe viewed from a Russian perspective.- Chapter IX. Universal meaning.- Annexes.- Annex 1. The capitals: Moscou, Saint-Petersbourg, Kazan.- Annex 2. The collective gardens "War Veterans".- Annex 3. The collective gardens "No. 7 of the Aircraft Engine Manufacturing Company/KMPO Kazan": massif Soukhaya rieka.- Annex 4. Late Pleistocene and Holocene Environmental Change on the Olympic Peninsula, Washington

This study brings together decades of research on the modern natural environment of Washington's Olympic Peninsula, reviews past research on paleoenvironmental change since the Late Pleistocene, and finally presents paleoecological records of changing forest composition and fire over the last 14,000 years. The focus of this study is on the authors' studies of five pollen records from the Olympic Peninsula. Maps and other data graphics are used extensively.

Features

▶ Offers reviews of past studies of the Olympic Peninsula as well as new data and analysis from the authors ▶ Updated presentation and analysis of studies from the 1950s through 1980s offers a historical baseline and exposes readers to previously inaccessible data ▶ The records presented show how climate change of the late Pleistocene and Holocene periods affected the biodiversity of the Olympic Peninsula ▶ This data sheds light on the potential impacts of projected climate change

Contents

1. The modern landscape of the Olympic Peninsula.- 2. Geology and historical biogeography of the Olympic Peninsula.- 3. Postglacial climate on the Olympic Peninsula.- 4. Late Quaternary vegetation and fire history of the Olympic Peninsula.- 5. Brief review of the archeological record in a context of environmental change.- 6. Insights and future research needs.

Abiotic Stress Biology in Horticultural Plants

The purpose of this publication is to elucidate the biological aspect of the abiotic stress response from the field to the molecular level in horticultural plants. This book is unique in that it concerns the basic aspect of abiotic stress biology and research progress at the molecular level in model plants or major field crops, as it focuses mainly on the abiotic stress response in existing horticultural plants. Many readers interested in plant abiotic stress biology are aware of the application of the latest findings to agricultural production, and this book will have a special appeal for those readers.

Features

► Provides a detailed description of abiotic stress biology in horticultural crops from the field to the molecular level ► Includes the relationship between abiotic stress and physiological disorders and quality improvement as a unique phenomenon in horticultural crops ► Discusses the latest findings mainly with regard to major fruit crops in which readers worldwide are interested

Contents

Part I Stress Physiology and Molecular Biology in Horticultural Plants.- Part II Effects of Abiotic Stress on Horticultural Crop Production and Storage.- Part III Stress Biology in Physiological Disorders of Horticultural Crops.- Part IV Genetic Engineering Technologies and Omics in Stress Tolerance

Edible Medicinal And Non Medicinal Plants

Volume 9 Modified Stems, roots, Bulbs

Volume 9 is part of a multicompendium Edible Medicinal and Non-Medicinal Plants, on plants with edible modified stems, roots and bulbs from Acanthaceae to Zygophyllaceae (tabular) and 32 selected species in Alismataceae, Amaryllidaceae, Apiaceae, Araceae, Araliaceae, Asparagaceae, Asteraceae, Basellaceae, Brassicaceae and Campanulaceae in detail. This work is of significant interest to medical practitioners, pharmacologists, ethnobotanists, horticulturists, food nutritionists, botanists, agriculturists, conservationists, and general public. Topics covered include: taxonomy; common/ vernacular names; origin/ distribution; agroecology; edible plant parts/uses; botany; nutritive/medicinal properties, nonedible uses and selected references.

Features

► 150 coloured illustrations in this volume ► Referenced up-to-date information on nutritive and medicinal properties ► Common and vernacular names to help in plant identification ► Medical and scientific glossaries

Annual, Lunar, and Tidal Clocks

Patterns and Mechanisms of Nature's Enigmatic Rhythms

There is more to biological rhythms than circadian clocks. This book aims at promoting the exciting potential of a deeper understanding of circannual, circatidal, and circalunar clocks. It highlights new developments, summarizes existing knowledge, and integrates different perspectives with the tools and ideas of diverse fields of current biology. For predominantly pragmatic reasons, research in recent decades was mostly concerned with circadian clocks. Clocks on other timescales, however, have been largely neglected and therefore still appear "enigmatic". Thanks to the rapid development of methods in molecular biology as well as in ecology, we are now able to re-approach these clocks. Laboratories around the world are showing fresh interest and substantial progress is being made in many independent projects. The book's two sections address the moon-derived circatidal, circasemilunar, and lunar cycles on the one hand (10 chapters), and the sun-derived circannual cycles on the other (6 chapters).

Features

► Provides a state-of-the-art assessment of non-circadian rhythms ► Presents the work of key authors in the field ► Considers the three highly topical rhythmic scales jointly for the first time

Protein Cages

Methods and Protocols

This volume emphasizes new techniques to help understand protein cages and to apply them to a variety of technologies, highlighting the expertise of researchers based on three continents. Protein cages are currently inspiring diverse scientific disciplines and are therefore at the crossroads of extremely widely-scoped research, which is reflected in the detailed chapters of Protein Cages: Methods and Protocols.

Features

► Includes cutting-edge methods and protocols to explore protein cages ► Provides step-by-step detail essential for reproducible results ► Contains key notes and implementation advice from the experts

Contents

Encapsulation of Nanoparticles in Virus Protein Shells.- Use of Protein Cages as a Template for Confined Synthesis of Inorganic and Organic Nanoparticles.- Ferritin Encapsulation and Templated Synthesis of Inorganic Nanoparticles.- Determining the Relaxivity Values of Protein Cage-Templated Nanoparticles Using Magnetic Resonance Imaging.- Computationally Assisted Engineering of Protein Cages.- Recombinant Expression and Purification of "Virus-Like" Bacterial Encapsulin Protein Cages.- Production of Bacterial Microcompartments.- Detection of Protein Cage Assembly With Bis-Arsenic Fluorescent Probes.- Determining the Role of Metal Binding in Protein Cage Assembly.- Differential Scanning Calorimetry to Quantify the Stability of Protein Cages.- Material Properties of Viral Nanocages Explored by Atomic Force Microscopy.- Computational Mechanics of Viral Capsids.

GTPases

Versatile Regulators of Signal Transduction in Plants

G proteins are the key regulators for a wide range of cellular processes in animals and plants. In comparison to animals and yeast, plants have a single Rho-GTPase subfamily called Rho-like GTPases (ROPs).

Features

► Because of the major thrust area of research and development in the field of signal transduction and crop improvement against multiple stresses, this book will be used by large number of academic as well as plant research community ► Can also be used by academic communities for teaching purpose beside its usage in research ► Written by renowned scholars in the field of Plant Sciences

Contents

Overview of G Proteins (GTP binding proteins) in Eukaryotes.- Overview of Small GTPase Signaling Proteins in Plants.- Identification and Classification of Rho GTPases in Plants.- Sequence, Structure and Domain Analysis of GTPases in Plants.- Expression of Small GTPases Under Stress and Developmental Conditions in Plants.- Emerging Roles of Rho GTPases in Plants.- Cellular Localization of Small GTPases.- Functional Genomic Perspective of Small GTPases.- Systemic Approaches to Resolve Spatio-Temporal Regulation of GTPase Signaling.- Key Questions and Future Prospects.

Derivative Spectrophotometry and PAM-Fluorescence in Comparative Biochemistry

This book presents various examples of how advanced fluorescence and spectroscopic analytical methods can be used in combination with computer data processing to address different biochemical questions.

Features

► Introduces new concepts for the use of derivative spectrophotometry and PAM-fluorescence ► Discusses the topic in an interdisciplinary light, bridging the gap between physics, biochemistry, cell biology and genetics ► Provides a critical literature survey and new perspectives to the topic

Contents

Introduction. Development of the methodological base, disputes, conclusions.- Successes of the pulse amplitude modulated fluorescence application.- Methodological approaches in our experimental work.- Application of Derivative Spectrophotometry in Comparative Biochemical Studies.- The Range of DHSO Application in Experiments with Pigments of Plants and Animals.- Conclusion.

Ecological Diversity of the Microbiome in the Context of Ecology Theory and Climate Change

This book reviews the mechanisms, patterns, and processes that regulate prokaryotic diversity through different habitats in the context of evolutionary and ecological hypotheses, principles, and theories. Despite the tremendous role of prokaryotic diversity in the function of the global ecosystem, it remains understudied in comparison to the rest of biological diversity.

Features

► Describes the mechanisms and patterns of prokaryotic diversity ► Addresses how climate change will impact prokaryotes, their habitats, and their diversity ► Takes a unique ecological and evolutionary perspective

Contents

Chapter 1: Microbiome ecosystem ecology: unseen majority in an anthropogenic ecosystem.- Chapter 2: Theories, mechanisms and patterns of microbiome species coexistence in an era of climate change.- Chapter 3: Eco-evolutionary processes regulating microbiome community assembly in a changing global ecosystem.- Chapter 4: Loss of microbiome ecological niches and diversity by global change and trophic downgrading.- Chapter 5: Microbiome mediated multitrophic interactions in an age of microbial extinction.- Chapter 6: Global microbiome for agroecology, industry and human well-being: opportunities and challenges in climate change.

Thermophilic Carboxydrotrophs and their Applications in Biotechnology

The book describes the products produced by carboxydrotrophic bacteria and their biotechnological applications. Carbon monoxide (CO) is a widespread pollutant and a hazard to man because of its extremely toxic nature. It is a major component of some industrial gas mixtures and may be derived from coal. The carboxydrotrophic bacteria obtain energy and carbon from the oxidation of CO. These organisms may be used to produce new metabolites, and the oxidases from them may be used to produce fuel cells and biosensors for CO.

Features

► Provides in-depth technical information on the biotechnological aspects of carboxydrotrophic extremophiles ► Presents extensive illustrations, data, and up-to-date references ► A rare and informative book on extremophilic carboxydrotrophs, a current hot topic

Ethylene in Plants

This book focuses on recent advances in our understanding of the signal transduction pathway of ethylene, its interaction with other hormones and its roles in biological processes. It discusses at which point plants could have acquired ethylene signaling from an evolutionary perspective.

Features

► Systematically summarizing the current research development in plant ethylene signaling ► Thoroughly discussing the interaction between ethylene signaling and other plant signaling ► Introducing practical methodology in plant ethylene signaling studies ► Written by experts in the field

Contents

Ethylene Biosynthesis and Regulation in Plants.- Isolation of Components Involved in Ethylene Signaling.- Ethylene Receptors-Biochemical Events.- The Role of Protein-Protein Interactions in Signaling by the Ethylene Receptor.- Regulatory Components of Ethylene Signal Transduction.- Ethylene Signaling: from the Endoplasmic Reticulum to the Nucleus.- Ethylene as a Plant Hormone-An Evolutionary Perspective.- Interactions of Ethylene and Other Signals.- Integration of Ethylene and Gibberellin Signaling.- Integration of Ethylene and Auxin Signaling and the Developmental Consequences of Their Cross-talk.- Ethylene and Plant Immunity.- Research Tools: Biochemical and Biophysical Techniques for Studying Ethylene Signaling.- Research Tool: Ethylene Preparation: Treatment with Ethylene and Its Replacements.- Research Tools: Ethylene Detection

Receptor Tyrosine Kinases: Structure, Functions and Role in Human Disease

Receptor Tyrosine Kinase: Structure, Functions and Role in Human Disease, for the first time, systematically covers the shared structural and functional features of the RTK family. Receptor Tyrosine Kinases (RTKs) play critical roles in embryogenesis, normal physiology and several diseases. And over the last decade they have become the Number 1 targets of cancer drugs.

Features

► Leading scientists and researcher providing cutting-edge data ► A comprehensive resource that summarizes what we know about receptor tyrosine kinases ► An incredible resource to researchers and clinicians and would be utilized by a large audience including, professors, postdocs, graduate students, and scientists in both academic science and industry

Contents

Vertical Cooperative Advertising in Supply Chain Management

A Game-Theoretic Analysis

In this book methods from Operations Research and Game Theory are used to determine companies' profit-maximizing strategies related to pricing and (cooperative) advertising. It considers different supply chain structures as well as various distributions of power, making it possible to analyze both inter-echelon and intra-echelon dependencies between the companies' decisions.

Features

► Considers different supply chain structures and distributions of power in order to suit the characteristics of various industries ► Offers decision support for managers in manufacturing and retailing firms through numerical and graphical analyses of the derived solutions ► Presents an extensive literature review to familiarize the reader with the current state of mathematical modeling of vertical cooperative marketing

Contents

Introduction.- Fundamentals.- Cooperative advertising models in supply chain management.- Vertical cooperative advertising and pricing decisions in a manufacturer-retailer supply chain.- Game theoretic analysis of pricing and vertical cooperative advertising of a retailer-duopoly with a common manufacturer.- A manufacturer-retailer supply chain with fuzzy customer demand.- Résumé.

Socially Responsible Investment

A Multi-Criteria Decision Making Approach

This book integrates socially responsible investment into modern portfolio theory from a multi-criteria perspective. Socially responsible investment is a "new deal" championed by the institutional investment and bank sectors, agents that influence mutual funds and other collective investment schemes and which fear that financial strategies without ethical constraints can harm sustainable growth and prosperity. The book shows how to combine financial criteria such as profitability and risk with non-financial criteria such as the protection of the ecosystem, responsible consumption of energy, and healthcare campaigns.

Features

► First book to approach socially responsible investment as a multicriteria decision making problem ► Presents a normative, rather than a descriptive approach ► Emphasizes the use of goal programming and compromise programming models to select ethical financial portfolios and to evaluate fund performance

Contents

Drivers of Bank Lending

New Evidence from the Crisis

After the recent financial crisis has hooked the banking system to its very foundations, Hartmut Brinkmeyer contributes to the question of how bank characteristics influence bank loan supply during crisis periods by developing a well-founded theoretical framework. The econometrical design deploys a number of remarkably innovative ideas such as the implementation of a bank-specific, self-chosen target capital ratio or a very convincing approach to the disentanglement of loan supply and demand. The results of this study deliver a profound insight into the lending behavior of European banks and explicitly urge academic and practical discussion.

Governing Metropolitan Transport

Institutional Solutions for Policy Problems

This book investigates the links between institutions and public policies with specific reference to transport. It opens by examining the main arguments for government intervention and regulation of local transport, explaining the case for integrated transport authorities on the basis of literature on transport economics and metropolitan governance. The potential impacts of institutional change on the policy efficiency of institutions are then examined. Key traps for institutional designers are identified, the baseline hypothesis being that all of these traps must be avoided when reshaping institutional settings to achieve desired policy outcomes and solutions.

Features

- Investigates the link between institutions and public policies with specific reference to transport
- Identifies key traps for institutional designers
- Presents two in-depth case studies on the governance of London and Barcelona
- Useful to both advanced scholars on institutions and practitioners

Contents

1 Introduction.- 2 The policy case for integrated transport authorities.- 3 Institutions, institutional change and policy outcomes.- 4 The new governance of Transport in London.- 5 The metropolitan transport authority of Barcelona.- 6 Conclusions: Lessons for institutional designers.

Innovation and Entrepreneurship

Theory, Policy and Practice

This book aims to meet the needs of education and training in modern techniques of innovation and entrepreneurship, and focuses on the detailed presentation of successful business practices. As today's global economic landscape is changing rapidly, the ability of businesses to introduce new products and services to the market faster than their competitors is perhaps their most distinct competitive advantage. This becomes obvious by the significant market share that the most innovative companies gain while increasing profitability. Extensive research in this field has demonstrated that companies that are constantly innovating normally double their profits compared to others.

Features

- Reviews theories and techniques of innovation, entrepreneurship and technology management
- Demonstrates correlation between innovation and economic competitiveness and sustainable growth
- Includes case studies and examples from private and public sectors

Contents

1 Introduction to Technological Innovation.- 2 Introduction to Innovation Management.- 3 Innovation and Competitiveness Case Studies.- 4 Innovation as Management Process.- 5 Innovation Systems.- 6 Introduction to Technological Entrepreneurship.- 7 Entrepreneurship and Innovation Practices.

The Global Crisis of 2008 and Keynes's General Theory

This book describes the international context and some of the factors that have weakened the influence of Keynesian economic thought. It illustrates economic responses offered by the new Keynesian school and the alternative perspective on the global crisis presented by the monetary circuit theory, with a special emphasis on Minsky's financial instability hypothesis. The authors present a commentary on Keynes's General Theory with an emphasis on his theory of the scarcity of capital, his analysis of the change in the structure of costs, and straightforward recommendation for a policy marked by very low interest, which he felt was needed to maintain full employment. Additionally, the book discusses major changes in the cost structure of globally active companies, resulting from the extremely intense international capital flows over the last three decades. The authors point out the need to redefine the open economy macroeconomics model, switching it from a world consisting of two major developed open economies to one consisting of two major open economies, one of which is developed and the other is developing.

Outside Director Compensation in German Public Family Firms

An Empirical Analysis

Pascal Engel investigates how outside directors are incentivized in family firms that are publicly listed but still partly owned by members of the founding family. Owning families significantly influence their firms' corporate conduct with their own set of goals, sometimes in conflict with economically driven goals of the capital markets. The author analyzes how family shareholders exert their influence on compensation schemes of outside directors who have the difficult task to protect the interests of family and non-family shareholders. This book provides insights on current approaches of defining a compensation scheme that attracts qualified outside directors but concurrently reflects respective shareholders' preferences.

European Retail Research

2013, Volume 27, Issue II

The aim of EUROPEAN RETAIL RESEARCH is to publish interesting manuscripts of high quality and innovativeness with a focus on retail researchers, retail lecturers, retail students and retail executives. As it has always been, retail executives are part of the target group and the knowledge transfer between retail research and retail management remains a part of the publication's concept. EUROPEAN RETAIL RESEARCH welcomes manuscripts on original theoretical or conceptual contributions as well as empirical research – based either on large-scale empirical data or on the case-study method. Following the state of the art in retail research, articles on any major issues that concern the general field of retailing and distribution are welcome.

Corporate Governance and Contingency Theory

A Structural Equation Modeling Approach and Accounting Risk Implications

This book analyzes the determinants and effectiveness of corporate governance in an integrated model drawing on contingency theory and employing structural equation modeling (SEM). Business competition as an environmental factor and strategy as an organizational factor are important determinants of corporate governance, while organizational performance and earnings quality are two dimensions of its effectiveness. This book focuses on the relationship between corporate governance and earnings management, and shows that corporate governance is effective in improving earnings quality and reducing accounting and governance risks.

Features

► Presents new insights on corporate governance using structural equation modeling (SEM) ► Adds a unique approach to corporate governance research methods ► In-depth analysis of corporate governance and contingency theory

Growing Brands Through Sponsorship

An Empirical Investigation of Brand Image Transfer in a Sponsorship Alliance

Philip Gross addresses a new opportunity for growing brands that may reside within a sponsorship alliance. Typically, brands vie for image transfer from an event or other property when entering a sponsorship engagement. Yet this practice leaves a valuable part of a sponsorship alliance unexploited. Specifically, the author infers from theories of social and cognitive psychology to propose and test a research model that accounts for a sponsor to also gain from brand attitude and personality traits innately tied to a co-sponsor of the same event. The results provide evidence for direct image transfer between two sponsor brands. Hence, pairing with a co-sponsor might fortify or dilute a sponsor brand's image depending on the expediency of the image conveyed by that ally.

A model of Austrian economics

After the most recent financial crisis it has become clear that there exists a crisis also in economics as a science. The prevailing paradigms have failed to anticipate and to understand the financial crisis. New approaches are therefore needed. Of particular interest should be approaches that combine insights from those parts of economics that are largely neglected by the mainstream. Hendrik Hagedorn presents a model that synthesizes elements of Austrian, post-Keynesian, and evolutionary economics. Thus, an economic paradigm is developed that challenges neoclassical economics as a whole.

Sustainability of External Imbalances

A Critical Appraisal

Since the mid-1990s, sustainability of large and persistent current account positions have been attracting much attention from policy makers and economists alike. Alongside global imbalances, sustainability of imbalances within the euro area, which started widening shortly after the introduction of the euro, raised much concern. While there exists a large body of theoretical and empirical literature on sustainability of external imbalances, a systematic survey has been lacking so far. Angélique Herzberg fills this gap by examining a broad range of established sustainability measures concerning their applicability to the various global and intra-euro imbalances of the recent past. Furthermore, the author examines the existence of feedback effects from an economy's net international investment position to its trade balance.

Value Chain Marketing

A Marketing Strategy to Overcome Immediate Customer Innovation Resistance

Value Chain Marketing (VCM) is a promising strategy to overcome immediate customers' innovation resistance. By pursuing VCM, material suppliers enlarge their target group beyond their immediate customers and address their downstream customers as well. Treading on relatively unexplored grounds, this book explores the relevance of VCM and comprehends its process; identifies the critical factors for suppliers' marketing success, and compares the performance of VCM trials, using a multi-method design linking case study research and computational modeling.

Features

► Uses a multi-method approach combining case study research with computational modeling ► Offers an in-depth discussion and elaboration as well as empirical explication and validation of the concept of Value Chain Marketing ► Provides real-world examples on how Value Chain Marketing can be implemented

Contents

Focus and Scope: Introduction.- Conceptual and Methodological Foundation: Dealing with Value Chains.- Marketing Supplier Innovations.- Research Design and Methodology.- Qualitative Studies: Pilot Study.- Case Study.- Computational Modeling: Agent-Based Simulation Study.- Integrating Findings: Discussion of Findings.- Conclusions.- Appendix: Details - Pilot Study.- Details - Case Study.- Details - Agent-Based Simulation Study.

Corporate Social Responsibility and Governance

Theory and Practice

This book deals with the role of international standards for corporate governance in the context of corporate social responsibility. Based on the fundamentals of moral theory, the book examines governance and CSR in general, addressing questions such as: Is "good governance" not affected by moral concerns? How do the principles and practices of CSR standards adhere to or conflict with insights from business ethics and moral theory? To what extent do the standards and governance models provide normative guidance? Do the standards and governance guidelines provide an adequate means of benchmarking and auditing? Are these standards a help or a hindrance to stakeholder engagement and transparency?

Features

Cultural Impact on Lean Six Sigma and Corporate Success

Causal Analyses Considering the Effects of National Culture and Leadership

To achieve a better understanding of the influence of National Culture, Corporate Culture and Leadership Style on Lean Six Sigma implementation and Corporate Success a quantitative empirical web-based survey with Lean Six Sigma professionals involved in the social professional network LinkedIn was carried out by Miriam Jacobs. The outcome of this survey suggests, that certain constellations of these five factors are more successful than others. Companies with an almost equal balance across different Leadership Styles and types of Corporate Culture achieve the best results, while companies equipped with a Rational and Hierarchical Corporate Culture in the absence of transformational, participative or supportive leadership are likely to fail.

Network Economics

Principles - Strategies - Competition Policy

This textbook on network economics provides essential microeconomic instruments for the analysis of network sectors like telecommunications, transport or energy. Network-specific characteristics emerge both on the cost side and benefit side, requiring network providers to develop innovative entrepreneurial competition strategies for costing, pricing, and investment. From a competition policy perspective, a number of interesting questions arise: In which parts of networks is competition functional? In contrast, where is an abuse of market power to be expected? What is the division of labor between cartel authorities and regulatory agencies? The book develops an analytical framework for all network industries which allows readers to study entrepreneurial strategies as well as regulation and competition policies for network industries.

Features

- ▶ A modern approach to network economics providing an analytical framework for all relevant network industries
- ▶ Relevant entrepreneurial strategies for costing and pricing in network industries
- ▶ Well-founded concepts for regulation and competition policy in network industries

Modeling Markets

Analyzing Marketing Phenomena and Improving Marketing Decision Making

This book is about how models can be developed to represent demand and supply on markets, where the emphasis is on demand models. Its primary focus is on models that can be used by managers to support marketing decisions. The market environment is changing rapidly and constantly. Prior to the introduction of scanner equipment in retail outlets, ACNielsen, the major supplier of information on brand performance, claimed that its business was to provide the score but not to explain or predict it.

Features

- Comprehensive coverage of data analysis methodology and techniques in quantitative marketing
- Applies the most current topics, examples, research findings, and innovations in the field
- Designed as a research and professional resource and for course use; based on previous volumes with strong adoptions

Contents

Building models for markets.- Model specification.- Data.- Estimation and testing.- Validation and testing.- Re-estimation: introduction to more advanced estimation methods.- Examples of models for aggregate demand.- Individual demand models.- Examples of database marketing models.- Use: implementation issues.- Appendix A: Matrix algebra.

The Principle of Profit Models

This book mainly focuses on defining profit models, on how many main kinds of profit models there are, how profit models can change a company, and how to tailor a profit model to the needs of a certain company. In this context, profit models are classified as fixed-income, remaining-profit and profit-sharing, admission, toll, parking, fuel and sharing fees, profit sources, customer pricing, auction, combined pricing, etc. The logic behind all these profit models will be analyzed in detail and numerous micro-cases will be introduced. All of the micro-cases discussed are the best profit model practices used by outstanding enterprises, mainly from China and the USA (including HomeAway, Priceline, Tencent, Sina, Google, the Voice of China, CSPN and so on). These models will be complemented by a wealth of figures and additional tools to help readers better understand the principle of profit models. As such, the book not only explains “why” entrepreneurs preferred to apply a specific kind of profit model and not others, but also answers “how” they derived that model.

Features

- Combines academic with practitioner's perspective
- Introduces best profit models practices of the most outstanding enterprises mainly from China and USA
- Answers “why” entrepreneurs applied this kind of profit model other than others, and “how” they came out with the profit model as well

Contents

Profit sources (Stakeholders). - Fixed income.- Remaining profit.- Profit sharing.- Customer pricing.- Auction.- Combined pricing.

Optimization of Stochastic Discrete Systems and Control on Complex Networks

Computational Networks

This book presents the latest findings on stochastic dynamic programming models and on solving optimal control problems in networks. It includes the authors' new findings on determining the optimal solution of discrete optimal control problems in networks and on solving game variants of Markov decision problems in the context of computational networks.

Features

► Systematizes the most important existing methods of stochastic dynamic optimization ► Describes new algorithms for solving different classes of stochastic dynamic programming problems ► Presents methods to solve practical decision problems from diverse areas such as ecology, economics, engineering and communication systems

Contents

Discrete stochastic processes, numerical methods for Markov chains and polynomial time algorithms.- Stochastic optimal control problems and Markov decision processes with infinite time horizon.- A game-theoretical approach to Markov decision processes, stochastic positional games and multicriteria control models.- Dynamic programming algorithms for finite horizon control problems and Markov decision processes.

Leadership of Networks and Performance

A Qualitative and Quantitative Analysis

In contrast to hierarchical leadership within intra-organizational contexts, leaders of inter-organizational networks have to lead across organizational boundaries without hierarchical fiat or directive authority. The central research question of Susanne Ruckdäschel is how leadership behavior of network managers can influence network performance. Hereby, relational leadership in the form of empowering leadership is regarded as decisive criterion. Her study focuses on the interplay between network leaders and network companies. The perspectives of both the network managers and the network members are illuminated. Therefore, first, a mixed methods study is conducted from the perspective of the network managers and second, a quantitative analysis based on a structural equation model focuses on the perspective of the network members.

The Use of Risk Budgets in Portfolio Optimization

Risk budgeting models set risk diversification as objective in portfolio allocation and are mainly promoted from the asset management industry. Albina Unger examines the portfolios based on different risk measures in several aspects from the academic perspective (Utility, Performance, Risk, Different Market Phases, Robustness, and Factor Exposures) to investigate the use of these models for asset allocation. Beside the risk budgeting models, alternatives of risk-based investment styles are also presented and examined. The results show that equalizing the risk across the assets does not prevent losses, especially in crisis periods and the performance can mainly be explained by exposures to known asset pricing factors. Thus, the advantages of these approaches compared to known minimum risk portfolios are doubtful.

Chinese Strategic Decision-making on CSR

This research study attempts to provide a comprehensive CSR literature review, analyze corporate social responsibility (CSR) issues from the strategic decision-making (SDM) perspective, and investigate the process of managers' CSR-related SDM in China. In particular, it utilizes content analysis to examine selected CSR articles from published studies, in order to evaluate the trends in CSR theory development as well as to identify the variables, constructs, and relationships within CSR theory. The review indicates that CSR should be involved in organizational strategies. Therefore, this study reviews the relevant theoretical and empirical literature in the SDM area. Firstly, it summarizes the broader context of strategic decisions and points out factors in the external environment and organizational characteristics that influence the SDM process of managers.

Features

► Provides a systematic review of Corporate Social Responsibility (CSR), especially identifying milestones of CSR literature and providing better understanding of the evolution of CSR research ► Discloses how top leaders make their CSR-related strategic decision-making from psychological perspective ► Explains the relationship between different stakeholders' claims with top leaders' CSR decision-making

Contents

The Political Economy of Anti-dumping Protection

A Strategic Analysis

This book deals with anti-dumping measures (AD) and investigates two questions: First, what country characteristics affect AD use and notably, do domestic political institutions have an effect? Second, (how) is the decision to impose a new AD measure affected by anticipation of trading partners' potential retaliation? This book applies a strategic perspective to AD to address these questions, presenting a game-theoretic model together with an empirical test. The approach sheds light on the dynamics of interaction between trading partners and allows to capture selection processes which underpin the trade restrictions that can actually be observed.

Applying Business Capabilities in a Corporate Buyer M&A Process

As a first step towards applying Enterprise Architecture Management (EAM) in Mergers and Acquisitions (M&A), Andreas Freitag investigates the end-to-end applicability of business capabilities in the M&A process of a corporate buyer organization. Enterprises still struggle to manage M&A efficiently. A significant number of merger projects do not reach the expected goals or fail completely. Therefore, companies attempt to improve their M&A capability by establishing the required skills, organization, processes and methods. EAM is an approach for business and IT planning, promising to contribute to the success of business transformation challenges such as M&A. Business capability models are an essential element of a state of the art EAM approach. They are frequently used as a starting point to work collaboratively with business and IT stakeholders.

The Scrum Culture

Introducing Agile Methods in Organizations

This book is a guide for managers, Scrum Masters and agile coaches who are interested in agile organizational methods and who are planning to introduce Scrum at their company. Scrum is not only a product development framework but can also be used to structure activities for agile and lean organizational development. Divided into five major parts, in the first the book introduces and defines the Scrum Culture. It explains its relevance, highlights a number of painful points typical for first encounters with Scrum, and embeds it in an introduction to organizational change, fleshing it out with many real-life examples that help to apply the concepts to readers' own specific contexts. The second Part describes in detail the principles of introducing Scrum, while Part III embarks on the practical application of those principles, drawing on a wealth of experience gathered in many successful introduction projects.

Features

- ▶ Provides a comprehensive, yet to the point guide to introduce Scrum in an organization
- ▶ Emphasizes and explains the role of cultural aspects in organizational change
- ▶ Presents many real-life examples and a case study on the application of the Scrum concepts in practice

Contents

Part I: The Scrum Culture.- Part II: The Theory of Introducing Scrum.- Part III: The Practical Application of Kotter's Principles.- Part IV: Case Study.- Part V: Additional Information.

Organizational Innovation by Integrating Simplification

Learning from Buurtzorg Nederland

This book presents the theory of integrating simplification and it provides a profound evidence based study of Buurtzorg Nederland. The case itself, forming the building block of the theory, has received tremendous interest in the Netherlands and abroad. This is the first international book on Buurtzorg Nederland and the first one departing from a management multidisciplinary perspective. The book demonstrates theory building by using the Grounded Theory Methodology as a way to contribute to management theory. Integrating simplification gives room for context specific implementation of organizational innovation to different industries.

Features

- ▶ Explains a client-focus approach to be easily applied in different contexts
- ▶ Provides evidence-based theory and applicable model
- ▶ Provides a detailed description of the case to inspire a context specific application

Contents

Towards a New Way of Organizing.- Buurtzorg Nederland: Start-up Process and Organizational Design.- Theory of Integrating Simplification.- Attuning to Clients.- Subtle Craftsmanship in Communities.- Intrapreneurial Team Freedom.- Pragmatic Will with ICT.- Leading Higher Purpose.- Scientific Contribution of IST in the Domain of Organizational Innovation.- Implications and Discussion.- Reflections and Conclusion.

Inter-Organizational Relationships

Towards a Dynamic Model for Understanding Business Network Performance

This book explores the premise that organizations are significantly influenced by their inter-organizational relationships; moreover, these relationships may generate important externalities, both positive and negative, impacting the environment at several levels. The advent of the Internet era, on the other hand, has resulted in disruptive changes in traditional inter-organizational networks, and some completely new inter-organizational settings are now arising.

Features

- ▶ Includes a comprehensive survey of the extant theories on business networks
- ▶ Provides a novel dynamic model, re-usable and adaptable to real-world situations, to enhance business network strategies and practices
- ▶ Links tools and theories on business networks rooted in IT/IS studies to those rooted in management studies

Sovereign Insolvency

Possible Legal Solutions

The regulation of sovereign debts raises many complex economic and legal questions. The primary objective of this volume is to focus on the possible legal solutions for the challenges facing the insolvent states. Finding a way out of the sovereign debt crisis requires not only economic considerations, but it implies also a better understanding of the rage of different social and ethical aspects associated with this problem.

Transnational, European, and National Labour Relations

The future of labour relations and labour law, affected by globalisation and internationalisation processes is a matter which receives much attention, not only in the scientific legal community, but also wider public. For this reason, there is an increasing number of studies and research in this field, especially in the context of erosion of national prerogatives and decentralisation of cross-border economic activities. Neo-liberal globalisation, transnational corporations and the issue of labour and social standards have opened a variety of problems on global, European and national levels. The European Union endeavours in the recent years to deal with market challenges, posed particularly in the labour market, by positive, as well as negative harmonisation.

Sovereignty Referendums in International and Constitutional Law

This book focuses on sovereignty referendums, which have been used throughout different historical periods of democratization, decolonization, devolution, secession and state creation. Referendums on questions of sovereignty and self-determination have been a significant element of the international political and legal landscape since the French Revolution, and have been a central element in the resolution of territorial issues from the referendum in Avignon in 1791 until today. More recent examples include Quebec, East Timor, New Caledonia, Puerto Rico and South Sudan. The global aim of this book is to achieve a better empirical and legal understanding of sovereignty referendums and related problems in international and national law and politics.

Features

► A clear and complete mapping of the sovereignty referendums and related problems ► A manual for lawyers and political scientists working in the field ► Includes basic rules for a fair and legitimate referendum in the resolution of sovereignty conflicts

Contents

1. Introduction.- 2. Introduction to the Theory of Sovereignty Referendums.- 3. Sovereignty Referendums in the System of Politics.- 4. Sovereignty Referendums in the System of Law.- 5. Sovereignty Referendums in International Law.- 6. Sovereignty Referendums in Constitutional Law.- 7. Sovereignty Referendums: Common Legal Problems.- 8. Conclusion.

Realizing a New Global Cyberspace Framework

Normative Foundations and Guiding Principles

In many respects cyberspace has created a new world. The online phenomena encompass social, cultural, economic, and legal facets. Exceeding the present Internet Governance concept the book analyses the normative foundations and guiding principles of a global cyberspace regime that includes the exchange of people, businesses, governments, and other entities. Based on this assessment and philosophical theories the book attempts to outline a model for a general legal framework enshrining key principles of civil society (such as human rights, ethics).

Features

► Addresses the problems caused by the existing normative order of cyberspace ► Analyses the normative foundations and guiding principles of a global cyberspace regime ► Attempts to outline a model for a general legal framework enshrining key principles of civil society

Contents

Introduction.- Confrontation of traditional legal concepts with globalization.- Challenges for regulatory approaches in cyberspace.- In search for new rule-making approaches in cyberspace.- Development of a "Global Cyberspace Framework" (GCF).

Access to Justice in Transnational B2C E-Commerce

A Multidimensional Analysis of Consumer Protection Mechanisms

This book identifies institutional mechanisms that can be used to promote consumer confidence in direct online sales with businesses (B2C e-commerce). It argues that enhancing the access to justice in a multidimensional sense can potentially offer an effective means of boosting consumer confidence.

Features

► Recommendations for enhancing access to justice in B2C E-Commerce ► Introduces a conceptual framework for a multidimensional approach to access in justice in the context of consumer protection ► Demonstrates how private online ordering can be successfully implemented with the help of an intermediary, a neutral third party

Contents

1 Consumer Protection in B2C E-Commerce: Enhancing Consumer Confidence.- 2 Access to Justice: A Goal for Consumer Protection.- 3 Towards a Multidimensional Approach to Access to Justice: Setting a Framework for Consumer Protection in B2C E-Commerce.- 4 Substantive Mechanisms for Achieving Access to Justice.- 5 Procedural Mechanisms for Achieving Access to Justice.- 6 Transnational B2C E-Commerce: Legal Harmonization and the Need for a "Second Best Option".- 7 Improving Consumers' Access to Justice in B2C E-Commerce: Private Ordering and State as Intermediary.

Living Among Giants

Exploring and Settling the Outer Solar System

The outer Solar System is rich in resources and may be the best region in which to search for life beyond Earth. In fact, it may ultimately be the best place for Earthlings to set up permanent abodes. This book surveys the feasibility of that prospect, covering the fascinating history of exploration that kicks off our adventure into the outer Solar System. Although other books provide surveys of the outer planets, Carroll approaches it from the perspective of potential future human exploration, exploitation and settlement, using insights from today's leading scientists in the field.

Features

► Provides a unique perspective of the outer Solar System, based on planned and imagined future human exploration and possible colonization ► Offers insights from many of today's leading scientists in the field ► Focuses on destinations for settlement such as Jupiter's ocean-moon Europa, Saturn's moons Enceladus and Titan, Neptune's moon Triton, and even the clouds of the gas and ice giant planets themselves ► Includes numerous illustrations, among them original paintings by the author, a highly regarded and prize-winning space artist

Contents

Preface.- Early Ideas.- How They Got There.- How We Got There.- Jupiter and Saturn.- Uranus and Neptune: Not So Boring After All.- The Galileans: Io, Europa, Ganymede and Callisto.- Titan, The Other Mars.- Frolicking in the Outer Darkness.- Setting Down Roots for Good.

Astrophysics Is Easy

An Introduction for the Amateur Astronomer

Astrophysics is often –with some justification – regarded as incomprehensible without the use of higher mathematics. Consequently, many amateur astronomers miss out on some of the most fascinating aspects of the subject. Astrophysics Is Easy! cuts through the difficult mathematics and explains the basics of astrophysics in accessible terms. Using nothing more than plain arithmetic and simple examples, the workings of the universe are outlined in a straightforward yet detailed and easy-to-grasp manner. The original edition of the book was written over eight years ago, and in that time, advances in observational astronomy have led to new and significant changes to the theories of astrophysics. The new theories will be reflected in both the new and expanded chapters.

Features

► Using nothing more than arithmetic and simple examples, the workings of the universe are explained in a straightforward, yet detailed and coherent manner ► Covers ALL aspects and areas of astrophysics, from our own solar system to the edge of the universe without going into complicated math ► Features new and expanded chapters on Planetary Science, Exoplanets, Active Galaxies and Cosmology with current ideas and the latest research results

Contents

Introduction.- The Tools of the Trade.- Planetary Science.- The Interstellar Medium.- Star Birth.- The Sun and Stars.- The Death of Stars.- Exoplanets.- Galaxies.- Active Galaxies.- Cosmology.- Index.

Weird Universe

Exploring the Most Bizarre Ideas in Cosmology

As new discoveries complicate the scientific picture of the universe, the evolving theories about the nature of space and time and the origins and fate of the universe threaten to become overwhelming. Enter David Seargent. Continuing the author's series of books popularizing strange astronomy facts and knowledge, Weird Universe explains the bizarre, complicated terrain of modern cosmology for lay readers. From exploring some of the strange consequences of the theories of special and general relativity, to probing time dilation and the twin and mother-and-baby "paradoxes" and the theory that the universe can be mathematically considered as a hologram, all of the latest findings and conjectures are clearly described in non-technical language.

Features

► Introduces the most up-to-date and startling research findings in cosmology ► Maintains an approachable, informal and non-technical tone accessible to non-specialists ► Continues the author's well-received "Weird" series, including "Weird Weather," "Weird Astronomy" and "Weird Worlds" ► Like the earlier titles, this one suggests some projects and activities the reader can do to better understand the concepts presented

Stories of Men and Teaching

A New Narrative Approach to Understanding Masculinity and Education

This book investigates the dynamic relationship between masculinity, fiction and teaching answering one central question. How are male teachers influenced by fictional narratives in the construction of masculinities within education? It achieves this in three major steps: by describing a methodological system of narrative analysis that is able to account for the influence of a fictional text alongside a reading of interview data, by focusing on a specific cohort of male teachers in order to measure the influence of a fictional text and the literary tropes they contain, both widening and restricting perceptions of teachers and teaching. The book demonstrates how fictional narratives and their encompassing ideologies can become a powerful force in the shaping of male teachers professional identities.

Features

▶ Outlines a new paradigm for critical reflective practice ▶ Details a research project that has been running for four years and has involved over 100 teachers ▶ Adopts a unique critical position combining education, narrative studies and gender studies

Knowledge Management for School Education

This book introduces the application of knowledge management (KM) theories, practices, and tools in school organization for sustainable development. Schools in Asia Pacific have long faced a variety of challenges in terms of sustainable development under the education reforms and curriculum reforms to meet the demands of a knowledge society. Schools are inevitably expected to develop human capital for the knowledge society within the competitive global economy, and to interact with its policy environment and know how to leverage pedagogical knowledge.

Features

▶ The first book applying knowledge management in school education ▶ Provides guidelines for schools to implement knowledge management ▶ Presents strategies that identify, select, organise, distill and package information to improve teacher professional competency and school education quality

Contents

Challenges for Schools in a Knowledge Society.- Knowledge Management for School Development.- Managing Culture for Knowledge Management Implementation.- Cultivating Communities of Practice for Leveraging Knowledge.- Nurturing Teachers' Personal Knowledge Management Competencies.- Institutionalising a School Knowledge Management System.- A Knowledge Management Model for School Development.

Successful Educational Actions for Inclusion and Social Cohesion in Europe

This monograph analyses and describes successful educational actions with a specific focus on vulnerable groups (i.e. youth, migrants, cultural groups e.g. Roma, women, and people with disabilities). Concrete data that shows success in school performance in subject matters such as math or language will be provided, as well as children, teachers and families accounts of the impact of this success.

Features

► Includes the main conclusions and results of INCLUD-ED, the only Integrated Project on schooling funded under the Framework Programme of Research of the European Union ► Provides data from a large scale study carried out by 15 European research institutions ► Focuses on successful educational actions (SEAs) with evidence of their impact in academic achievement and social cohesion

Contents

1 Introduction: From "best practices" to Successful Educational Actions.- 2. The communicative methodology of the Includ-Ed research.- 3. Forms of classroom arrangement: streaming, mixture, inclusion.- 4. Successful Educational Actions in/ outside the classroom.- 5. Successful Educational Actions through family involvement.- 6. Schools as learning communities.- 7. Integrative actions for social inclusion (employment, political participation, access to housing and health).- 8. Recommendations for educational policy.

English for Academic Purposes in Neoliberal Universities: A Critical Grounded Theory

The critical grounded theory presented in this book offers valuable insights on the social processes and strategies used by Blended English for Academic Purposes Professionals (BLEAPs) at higher education institutions, as they struggle to negotiate the challenges arising from a new focus on recruiting international students and hunting for other resources for their universities.

Features

► Offers a new perspective on social processes affecting English for Academic Purposes management in Higher Education Juxtaposes existing theories with an empirical study of the practices in English for Academic Purposes units at universities ► Offers an action-based framework that will help teachers and new managers gain greater understanding of and control over issues in their profession ► Critically analyses common management strategies in EAP units in order to encourage good practices

Digital Games and Mathematics Learning

Potential, promises and pitfalls

Digital games offer enormous potential for learning and engagement in mathematics ideas and processes. This collection offers multidisciplinary perspectives—of educators, cognitive scientists, psychologists and sociologists—on how digital games shape new ways in which learners/gamers engage with both the social activity of gaming and mathematical ideas. This volume identifies opportunities for broadening current understandings of how mathematical ideas are fostered (and embedded) within digital game environments. In particular, the volume advocates for new and different ways of thinking about mathematics in our digital age—proposing that these mathematical ideas and numeracy practices are distinct from new literacies or multiliteracies. This collection recognises that the promise of digital games have not always been realised/fulfilled.

Features

► Represents a multi-disciplinary investigation of the influence and impact digital games have on young students mathematics engagement ► Focuses on engagement in out-of-school contexts and learning situations beyond classrooms ► Additional video and graphics will add depth and richness to the text, providing a more dynamic and multi-modal representation of research in digital learning contexts ► Features mathematics ideas through multidisciplinary and transdisciplinary lenses

New Series Environmental Discourses in Science Education

D. J. Tippins, Series editor: M. P. Mueller

This series wrestles with the tensions situated between environmental and science education and addresses the scholarly efforts to bring confluence to these two projects with the help of ecojustice philosophy. As ecojustice is one of the fastest emerging trends for evaluating science education policy, the topics addressed in this series can help guide pedagogical trends such as critical media literacy, citizen science, and activism. The series emphasizes ideological analysis, curriculum studies and research in science educational policy, where there is a need for recognizing the tensions between cultural and natural systems, the way language is endorsed within communities and associated influence, and morals and ethics embedded in school science. Conversations and new perspectives on residual issues within science education are likely to be addressed in nuanced ways when considering the significance of ecojustice, defensible environmentalism, free-choice. The Power of Education

Education for All, Development, Globalisation and UNESCO

This book is about the power of education: the kind of education that simultaneously improves the quality of life both of individuals and the wider society.

Features

▶ Equips readers with a deeper understanding of the challenges facing education and development agencies in the global knowledge society ▶ Provides an insider's account of the role played by the international community in supporting quality education for all, lifelong learning and education reform ▶ Offers a uniquely global perspective on the power of education to change societies, trends in education policy and practice, and progress being made in achieving internationally-agreed education and development goals ▶ Challenging and insightful, combines scholarly analysis with practical examples of how international programs contribute to building a more equitable, peaceful and sustainable world

Contents

Preface.- 1. The power of education.- 2. The right to education.- 3. Towards a literate world.- 4. Education for all - a quiet revolution.- 5. Education for all - milestones and millstones.- 6. Education for the 21st century.- 7. Education- the tree of life.- 8. Towards a culture of peace.- 9. Education at the crossroads.- 10. Higher Education - the engine of development.- 11. Games and game-changers in teaching and learning.- 12. Science, technology, health and sustainable development.- 13. On building and rebuilding nations.- 14. Power, policy making and globalisation.

Second International Handbook on Globalisation, Education and Policy Research

This handbook presents a global overview of developments in education and policy change during the last decade. It provides an accessible, practical and comparative source of current research that examines the intersecting and diverse discourses of this important issue. Divided into two parts, the handbook first examines globalisation and education policy reforms, including coverage of main trends as well as specific policy issues such as gender, equity, minorities and human rights. Next, the handbook offers a comparative perspective that evaluates the ambivalent and problematic relationship between globalisation, the state and education reforms globally. It features coverage on curricula issues and education reforms in schools around the world as well as the curriculum in the global culture.

Features

- ▶ Examines central discourses surrounding the debate of globalisation, education and policy reforms
- ▶ Illustrates the nexus between globalisation, the state and education
- ▶ Demonstrates ideological imperatives of globalisation and education reforms
- ▶ Evaluates the ambivalent and problematic relationship between globalisation, the state and education reforms globally

Trust and Rationality

An Integrative Framework for Trust Research

Combining economic, social-psychological and sociological approaches to trust, this book provides a general theoretical framework to causally explain conditional and unconditional trust; it also presents an experimental test of the corresponding integrative model and its predictions. Broadly, it aims at advancing a cognitive turn in trust research by highlighting the importance of (1) an actor's context-dependent definition of the situation and (2) the flexible and dynamic degree of rationality involved. In essence, trust is as "multi-faceted" as there are cognitive routes that take us to the choice of a trusting act. Therefore, variable rationality has to be incorporated as an orthogonal dimension to the typological space of trust. The theory presents an analytically tractable model; the empirical test combines trust games, high- and low-incentive conditions, framing manipulations, and psychometric measurements, and is complemented by decision-time analyses.

Integrative Clinical Social Work Practice

A Contemporary Perspective

In recent history the practice of medicine and mental health has been increasingly eclectic as more and more practitioners harness seemingly disparate therapies and techniques to arrive at clinical breakthroughs. But while social work professionals have been involved in integrative practice informally and intuitively for years, resources to bring structure to this therapeutic concept have been few and far between. In response, Integrative Social Work Practice offers innovative ways of conceptualizing cases, communicating with clients and making better therapeutic use of client individuality. Rich in research, evidence-based and clinical material from a variety of settings, the book begins with the basic organizing principles behind effective integrative practice.

Features

- Provides a unifying theory of social work practice
- Reviews existing clinical and research literature on integrated approaches
- Offers practical guidelines to inform treatment, supervision and training of clinicians

Contents

Preface.- Integration or Eclecticism: Rationale for an Integrative Theory.- Contemporary Psychodynamic Models.- Developmental Models.- Cognitive and Behavioral Models.- The Body-Mind Connection.- Making Assessments and Choosing Interventions.- An Integrative Approach to Therapeutic Relationships.- Small Steps and Manageable Goals.- Building and Working with an Integrative Team.- Working on and Working through.

Landscapes Culture - culturing Landscapes

The differentiated construction of Landscapes

Increasing international migration the seemingly universal penetration of landscapes (including the internet) and global travel call for research to consider the multitude of different cultural meanings of landscapes. This book reflects the mechanisms of the creation of culture as well as the mechanisms of the social construction of landscapes. The logics of multi-cultural perceptions and meanings of landscape are reflected by an international authorship. The book also provides guidance on cultural sensitive issues and inclusion in practical planning.

Features

- Reflects the different meanings and mechanisms of culture - in which way do they affect the social construction of landscapes?

Metals in Past Societies

A Global Perspective on Indigenous African Metallurgy

This book seeks to communicate to both a global and local audience, the key attributes of pre-industrial African metallurgy such as technological variation across space and time, methods of mining and extractive metallurgy and the fabrication of metal objects. These processes were transformative in a physical and metaphoric sense, which made them total social facts. Because the production and use of metals was an accretion of various categories of practice, a chaine opératoire conceptual and theoretical framework that simultaneously considers the embedded technological and anthropological factors was used.

Features

► Communicates the key attributes of African metallurgy, to both a global and local audience ► Provides narrative on conceptual gaps between the technological and sociological dimensions of metallurgy ► Considers the five metals of Sub-Saharan African civilizations, and how their working varied from area to area within the wider archaeology of the continent

Contents

Chapter 1: Metals and the production and reproduction of society.- Chapter 2: Origins and development of Africa's pre-industrial mining and metallurgy.- Chapter 3: Mother earth provides: mining and crossing the boundary between nature and culture.- Chapter 4: Domesticating nature.- Chapter 5: Socializing metals.- Introduction: fabricating metal into cultural products.- Chapter 6: The social role of metals.- Chapter 7: Bridging conceptual boundaries, a global perspective.

Sociability, Social Capital, and Community Development

A Public Health Perspective

This book provides a critical understanding of contemporary issues within global society and how these relate to six case study examples (UK, USA, China, India, South Africa, Bangladesh, and Japan). The authors draw on their diverse experience to explore four major themes of contemporary relevance: overall aging of societies; governance and institutions; emergency services and public health provisions; and community activism and involvement. The key issues within the book--sociability, social capital, and community development--are examined in the context of an ever increasing aging world.

Features

► Provides optimistic perspective on contemporary concerns about shrinking of state welfare provision and how communities can meet the resultant gap ► Focuses on key concepts of sociability, social capital, and community development ► Case study approach gives a vibrancy and real-world emphasis ► Provides contemporary international perspectives to the chosen themes

Spirits in Transcultural Skies

Auspicious and Protective Spirits in Artefacts and Architecture Between East and West

The volume investigates the visualization of both ritual and decorative aspects of auspiciousness and protection in the form of celestial characters in art and architecture. In doing so, it covers more than two and a half millennia and a broad geographical area, documenting a practice found in nearly every corner of the world. Its transcultural approach aims at gaining insights into cultural dynamics and consistent networks and defining new historical mindmaps; it examines reciprocal effects and aspects of interwovenness in art and architecture with a view to reconceptualizing their established realms. The collection opens a window on a phenomenon in the history of art and architecture that has never before been considered from this perspective.

Features

▶ Nine comprehensive articles that focus upon a transcultural iconography in art history ▶ Methodologically innovative approaches to redefine and develop the practice of identification and classification of angelic motifs as a means to understanding meaning ▶ Around 130 illustrations of goddesses, gods, genii, victoriae, angels, paris, apsaras, vidyādhari, shenren, yuren, hiten, tennin, winged dragons etc. ▶ ādhari, shenren, yuren, hiten, tennin, winged dragons etc.

The Impact of Religiosity on Fertility

A Comparative Analysis of France, Hungary, Norway, and Germany

The work investigates the impact of religiosity of women and men on their completed fertility in an international comparison considering a long time period. Sandra Hubert aims at uncovering all mechanisms through which religiosity and religious institutions can affect fertility. Hence, both the micro- and the macro-level of each country are explicitly integrated, and theoretically as well as empirically dealt with. The selection of differing countries rests upon the expectation that religiosity influences fertility decisions independently of the institutional context, social norms, state church-relations, and the national degree of religious vitality. These factors are intensively compared with each other at the country level. At the micro-level the impact of religiosity on fertility is tested by means of regressions and based on the Generations and Gender Survey. Results depend on gender, country, the diverse religious affiliations, and more.

Training and Practice for Modern Day Archaeologists

In recent years, an important and encouraging development in the practice of archaeology and historical preservation has been the markedly increased number of collaborations among archaeologists, educators, preservation planners, and government managers to explore new approaches to archaeological and heritage education and training to accommodate globalization and the realities of the 21st century worldwide. But what is the collective experience of archaeologists and cultural heritage specialists in these arenas? Should we be encouraged, or discouraged, by national and international trends? In an attempt to answer these questions, this volume examines and gives representational examples of the respective approaches and roles of government, universities, and the private sector in meeting the educational/training needs and challenges of practicing archaeologists today.

Features

► Case study examples come from Western and Eastern Europe, the United States, Canada, former Soviet Republics, Africa, Asia, the Mediterranean, and Australia. ► Looks at the discrepancy between training and practice for modern-day archaeologists ► Explores how archaeologists function and integrate in the developing world

Understanding the Dynamics of Global Inequality

Social Exclusion, Power Shift, and Structural Changes

Despite the fact that the globalization process tends to reinforce existing inequality structures and generate new areas of inequality on multiple levels, systematic analyses on this very important field remain scarce. Hence, this book approaches the complex question of inequality not only from different regional perspectives, covering Africa, Asia, Europe, Latin and Northern America, but also from different disciplinary perspectives, namely cultural anthropology, economics, ethnology, geography, international relations, sociology, and political sciences. The contributions are subdivided into three essential fields of research: Part I analyzes the socio-economic dimension of global exclusion, highlighting in particular the impacts of internationalization and globalization processes on national social structures against the background of theoretical concepts of social inequality. Part II addresses the political dimension of global inequalities. Since the decline of the Soviet Union new regional powers like Brazil, China, India and South Africa have emerged, creating power shifts in international relations that are the primary focus of the second part.

Child Street Life

An inside view of hazards and expectations of street children in Peru

This brief studies the phenomenon of street children in two cities in Peru. It looks at some of the conceptual issues and, after analysing why children are in the street and what behaviour and which aspirations they exhibit, deals with the policy issues and lessons to be learned. This brief investigates when and why the transition from children on the street (street-working children) to children of the street (street living children) takes place and elucidates how they survive. It explains the fluidity and the risks involved in any type of child street life.

Developing and Maintaining Police-Researcher Partnerships to Facilitate Research Use

A Comparative Analysis

This Brief discusses methods to develop and maintain police – researcher partnerships. First, the authors provide information that will be useful to police managers and researchers who are interested in creating and maintaining partnerships to conduct research, work together to improve policing and help others understand the linkages between the two groups. Then, more specifically, they describe how police managers consider and utilize research in policing and criminal justice and its findings from a management perspective in both the United States and Australia. While both countries experience similar issues of trust, acceptance, utility, and accountability between researchers and practitioners, the experiences in the countries differ. In the United States with 17,000 agencies, the use of research findings by police agencies requires understanding, diffusion and acceptance.

Features

► Presents practical solutions for developing and applying police research to practice ► Provides international case studies for comparisons amongst a variety of justice systems

Karl W. Deutsch: Pioneer in the Theory of International Relations

This book celebrates the continuing importance of a world-class leader in the theory and scientific analysis of international relations and comparative politics. Topics on which Karl Deutsch wrote prolifically included nationalism, social communication, European integration, cybernetics, war & peace, arms control, social cybernetics, general systems analysis, and global modeling. He had a deep understanding of European political and intellectual history, experienced the violence induced by nationalism in pre-WWII Europe, and in 1938 fled Czechoslovakia for the United States following Hitler's takeover of the Sudetenland. Subsequently he pioneered the development and analysis of large-scale political and social data across nations and over time. He became a powerful global proponent of widespread access to this data and its public scientific evaluation. He was a world citizen, and very likely the most distinguished social scientist on international relations of his generation.

Feature

► Biography and benchmark papers of one of the most distinguished social scientists in the 20th century

Contents

Brief Introduction on Deutsch as Pioneer.- Substantial biographical and bibliographical essay with selected photos.- Comprehensive bibliography of his work and achievements.- Selected key innovative scientific texts of the pioneer.

The Archaeology of Science

Studying the Creation of Useful Knowledge

This manual pulls together—and illustrates with interesting case studies—the variety of specialized and generalized archaeological research strategies that yield new insights into science. Throughout the book there are templates, consisting of questions, to help readers visualize and design their own projects. The manual seeks to be as general as possible, applicable to any society, and so science is defined as the creation of useful knowledge—the kinds of knowledge that enable people to make predictions. The chapters in Part I discuss the scope of the archaeology of science and furnish a conceptual foundation for the remainder of the book.

Features

► Pulls together various archaeological research strategies that yield new insights into science ► Contains templates, consisting of questions, to help readers visualize and design their own projects ► New insights are offered into the relationship of science and technology

Contents

PART I.- 1 Introduction.-2 Science: A Behavioral Perspective.-3 The Varieties of Scientific Knowledge.-PART II.- 4 Experimental Archaeology.- 5 Ethnoarchaeology.-6 Archaeometry.-PART III.- 7 The Artifacts of Modern and Early Modern Science.-8 Thomas Edison's Science.-9 Colonization and Exploration.-10 Scientific Expeditions to Antarctica.-11 The U.S. Nuclear Establishment.-12 Archaeology of the Space Age.- 13 Discovery Processes.

Childbearing and Careers of Japanese Women Born in the 1960s

This book provides the keys to understanding the trajectory that Japanese society has followed toward its lowest-low fertility since the 1980s. The characteristics of the life course of women born in the 1960s, who were the first cohort to enter that trajectory, are explored by using both qualitative and quantitative data analyses. Among the many books explaining the decline in fertility, this book is unique in four ways.

Features

► Blends qualitative and quantitative methods to show how individuals' choices to balance work and life careers unintentionally and aggregately resulted in a low-fertility trend ► Targets the 1960s cohort's experience of the rapid changes in work conditions and social norms, which caused late marriage and postponed childbirth ► Provides a thorough reference to the social conditions of fertility decline in Japan: law and policy changes, countermeasures by companies, and changes in women's lives

Contents

Introduction.- 1 Trends of Demographic and Work-related Indexes in Japan after WWII.- 2 Birth Cohort of 1960s :Its Unique Life Course in the Rapid Changes of Socioeconomic Conditions.- 3 Women's Subjective Life Course of 1960s Cohort I :Early Career and Family Formation.- 4 Women's Subjective Life Course of 1960s Cohort II : Middle Career and Family Formation.- 5 Fertility Decline as an Unintended Consequence of Individuals' efforts toward Work-life Balance. – Conclusion.

The Golden Rule in Sports

Investing in the Conditions of Cooperation for a Mutual Advantage in Sports Competitions

Elite level sport lends itself to a highly competitive environment that encourages players to seek a competitive advantage in order to win. Since competition is an inherent condition that is also considered desirable in this setting, it may at first glance seem as if cooperation does not have any room in elite level sports. Sustainable cooperation can be mutually advantageous for players, but it only has a chance of coming into fruition if it is also in line with individual players' self-interests. In order for morality and self-interests to align with one another, investment in the conditions is required. Alicia Bockel analyzes ways that players can invest in the conditions of sustainable cooperation for a mutual advantage despite a highly competitive sports environment.

Physicalism and the Mind

This book addresses a tightly knit cluster of questions in the philosophy of mind. There is the question: Are mental properties identical with physical properties? An affirmative answer would seem to secure the truth of physicalism regarding the mind, i.e., the belief that all mental phenomena obtain solely in virtue of physical phenomena. If the answer is negative, then the question arises: Can this solely in virtue of relation be understood as some kind of dependence short of identity? And answering this requires answering two further questions. Exactly what sort of dependence on the physical does physicalism require, and what is needed for a property or phenomenon to qualify as physical? It is argued that multiple realizability still provides irresistible proof (especially with the possibility of immaterial realizers) that mental properties are not identical with any properties of physics, chemistry, or biology. After refuting various attempts to formulate nonreductive physicalism with the notion of realization, a new definition of physicalism is offered.

Features

- Addresses a tightly knit cluster of significant questions in the metaphysics of mind
- Critiques accounts of realization by Melynck, Pereboom, and Shoemaker
- Describes a sense in which mental properties qualify as physical even if not identical with properties of the natural sciences

Contents

Chapter 1. Multiple Realizability.- Chapter 2. Supervenience and Physicalism.- Chapter 3. Realization and Constitution.- Chapter 4. Defining Physicalism.

Interdisciplinary Research and Trans-disciplinary Validity Claims

Interdisciplinarity has seemingly become a paradigm for modern and meaningful research. Clearly, the interdisciplinary modus of deliberation enables to unfold relevant but quite different disciplinary perspectives to the reflection of broader scientific questions or societal problems. However, whether the comprehensive results of interdisciplinary reflection prove to be valid or to be acceptable in trans-disciplinary terms depends upon certain preconditions, which have to be fulfilled for securing scientific quality and social trust in advisory contexts. The present book is written by experts and practitioners of interdisciplinary research and policy advice.

Features

- Analyses topical and methodological approaches towards interdisciplinarity
- Written by experts and practitioners of interdisciplinary research
- Conclusions address relevant research and education politics

The Tagore-Gandhi Debate on Matters of Truth and Untruth

Between 1915 and 1941, Tagore (1861-1941) and Gandhi (1869-1948) differed and argued about many things of personal, national, and international significance---satyagraha, non-cooperation, the boycott and burning of foreign cloth, the efficacy of fasting as a means of resistance and Gandhi's mantra connecting "swaraj" and "charkha". The author tracks the development of this dialogue and argues that the debate was about more fundamental issues, such as the nature of truth and swaraj/freedom and the possibilities of untruth that Tagore saw in Gandhi's movements for truth and freedom.

Features

► The only monograph on the Tagore-Gandhi debate ► Provides a philosophical re-interpretation of Tagore's positions on nationalism and cosmopolitanism ► Gives new insights on Gandhi's central moral and political concepts ► Examines Akeel Bilgrami's reading of Gandhi's truth ► Discusses the differences between Tagore and Gandhi's understandings of swaraj/freedom

Contents

Chapter 1: The Tagore-- Gandhi Debate: An Account of the Central Issues.- Chapter 2: Of Mantras and Unquestioned Creeds: Re-constructing Gandhi's Moral Insights.- Chapter 3: Gandhi's Truth: Debate, Criticism, and the Possibilities of Closure in Moral Arguments.- Chapter 4: Tagore: On the possibilities of untruth and moral tyranny.- Chapter 5: Understanding Swaraj: Tagore and Gandhi.- Chapter 6: Gandhi and Tagore: Life in an Enchanted Cosmos.

Teaching and Researching the Pronunciation of English

Studies in Honour of Włodzimierz Sobkowiak

The book contains contributions from practitioners and theoreticians who explore the pronunciation of English from various perspectives: phonetic, phonological, psycholinguistic and sociolinguistic. In accordance with the unifying theme of the volume, individual contributions investigate the characteristics of a foreign accent, its production and perception, study the development of methods and techniques in pronunciation teaching, evaluate their use in classroom materials and in the classroom itself, and investigate the conditions for second language learning and teaching from the perspective of learners and teachers. The book offers a unique combination of a scholarly research with practical applications, inspired over the years by the work of Professor Włodzimierz Sobkowiak, who has researched pronunciation teaching and pioneered technology-oriented, corpus-based approaches to the study of English pronunciation in Poland.

Features

► Approaches pronunciation learning and teaching from a variety of theoretical perspectives ► Provides an account of original studies investigating different aspects of pronunciation in a foreign language ► Successfully links theoretical positions, empirical evidence and classroom practice

Jizi and His Art in Contemporary China

Unification

Writing is a complex undertaking especially when the topic is contemporary Chinese art and the search for ways to spiritually enrich attitudes toward life in the present. Jizi's dedication and determination over many decades of painting makes a book such as this possible. With the help of his experiences, writings and conversations, we have assembled here a comprehensive volume of essays, commentaries and reflections. Jizi's images on the theme of the unification of self, nature, others and a larger universe are sources for stimulation, guidance and enlightenment that each reader is invited to examine and appreciate.

Features

► A case study in the contemporary practice of Chinese ink painting ► Resolves not only the history of aesthetics issues but also the concern about authentic art criticism ► Presents a unique perspective on thinking about and understanding ink painting issues

Contents

Introduction Conflicts and Confrontations: The Journey of China's Contemporary Chinese Ink Paintings.- Chapter 1 Questions.- Chapter 2 Who Is Jizi?.- Chapter 3 Paths of Contemporary Chinese Art.- Chapter 4 Philosophy of Chinese Ink Art.- Chapter 5 Spiritual as Mountains and Cosmos.- Chapter 6 Chinese Ink Art and Global Changes.- Appendix.

Beginning Kinect Programming

with the Kinect for Windows v2 SDK

The Kinect is the original and most popular motion sensing input device for computers and game consoles, enabling natural user interaction through gestures and speech. Beginning Kinect Programming is an ideal introduction to developing apps that understand and use these exciting capabilities, ranging from depth sensing and motion tracking to speech recognition, digital art and 3D scanning, with the next generation Kinect for Windows v2 sensor and SDK. The book starts by taking you through fundamentals of Kinect programming as you set up your development environment and build your first working Kinect application. The v2 sensor includes higher definition full color video, better depth image processing and more sophisticated skeleton tracking, all of which you'll be introduced to in guided code walkthroughs for maximum accessibility. Audio processing is next as the author takes you through examples of programming speech recognition with Kinect. Also included is a useful introduction to using C++ alongside your C# code for maximum speed and power in particle interactions. The final chapters of the book dive into some exciting and imaginative ways to interact with your Kinect, featuring digital art, 3D avatar creation for Unity3D, scanning 3D objects with Kinect, and computer vision.

Swift Quick Syntax Reference

Swift Quick Syntax Reference is a 120-page condensed code and syntax reference to the new Apple Swift programming language, which is the alternative new programming language alongside Objective-C behind the APIs found in the Apple iOS SDK 8 and Mac OS X Yosemite SDK. It presents the essential Swift syntax in a well-organized format that can be used as a handy reference. You won't find any technical jargon, bloated samples, drawn out history lessons, or witty stories in this book. What you will find is a language reference that is concise, to the point and highly accessible. The book is packed with useful information and is a must-have for any Swift programmer. In the Swift Quick Syntax Reference, you will find a concise reference to the Swift language syntax using the new Playgrounds Playgrounds lets you type a line of code and the result appears immediately. This reference is small and handy and ideal for taking with you to your appointments.

Feature

► Aims to be one of the first pocket code references on the new Swift programming language from Apple.
Aims to be day and date asap after Fall 2014 releases of final Swift and iOS 8 SDK.
Matt Campbell has authored several Objective-C and iOS books for Apress and is an iOS app developer.
Swift is hot new programming language from Apple.

Pro Windows 8 Apps for Business in XAML

Pro Windows 8 Apps for Business in XAML is a book that focuses on creating compelling business applications in the new Windows 8 Modern UI environment, WinRT. Microsoft's Windows 8 operating system represents a major shift in the way applications will be designed and interacted with. This book will navigate the you through the new framework and provide you with the tools necessary to build successful business applications. Starting with an introduction to XAML and creating new Windows 8 applications, this book quickly progresses to the important concepts of application development and how they are addressed in WinRT. While this book can be read from cover to cover, with each chapter building on the previous one, you can also use it as a resource to focus on a particular topic. Pro Windows 8 Apps for Business in XAML demystifies the new WinRT architecture and allows you to quickly get up to speed with creating exciting applications that will function well in a business environment. Be one of the first to bring your business applications to Microsoft's newest platform and stand out from the crowd.

Feature

► One of the first books to be published specifically addressing how Microsoft's newest technology can be applied to the unique demands of a business environment. Provides readers will a clear overview of the frameworks that have carried over from .NET, how they remain the same and how they've changed. Emphasises the new XAML and WinRT architectures to ensure readers are working within Microsoft's best-practice guidelines from the very start.

Beginning SQL Server for Developers

Beginning SQL Server for Developers is the perfect book for developers new to SQL Server and planning to create and deploy applications against Microsoft's market-leading database system for the Windows platform. Now in its fourth edition, the book is enhanced to cover the very latest developments in SQL Server, including the in-memory features that are introduced in SQL Server 2014. Within the book, there are plenty of examples of tasks that developers routinely perform. You'll learn to create tables and indexes, and be introduced to best practices for securing your valuable data. You'll learn design tradeoffs and find out how to make sound decisions resulting in scalable databases and maintainable code. SQL Server 2014 introduces in-memory tables and stored procedures. It's now possible to accelerate applications by creating tables (and their indexes) that reside entirely in memory, and never on disk. These new, in-memory structures differ from caching mechanisms of the past, and make possible the extraordinarily swift execution of certain types of queries such as are used in business intelligence applications. Beginning SQL Server for Developers helps you realize the promises of this new feature set while avoiding pitfalls that can occur when mixing in-memory tables and code with traditional, disk-based tables and code.

Feature

► Fourth edition of a proven successful title for developers learning SQL ServerIntroduces readers to the newly-introduced, in-memory feature setIncludes content to appeal to client-side as well as server-side programmers

Transitioning to Swift

iOS and Mac apps development is an exciting topic these days. Apple now introduces the new Swift programming language makes building iOS and Mac OS apps easier and quicker to build. In this 150-page book, author Scott Gardner starts by pointing out the similarities and differences between traditional Objective-C based development and Swift, discusses playgrounds and takes you through a quick overview of this new programming language and how it leverages the Cocoa or Cocoa touch libraries. He'll get you started quickly in developing apps in this new environment. Written at a brisk pace and in a no-nonsense style, you'll find exactly what you need to understand about what's different in Swift compared to what you know already, and pointers on how to develop solid apps.

Feature

► Aims to be one of the very first Swift books to market. Scott Gardner is a recognized expert among Apple apps developers community.Apple Swift aims to make it easier, quicker to program or build iOS and Mac apps and is "Python-like" language new from Apple.

HBase Recipes

HBase is an open source, non-relational, distributed database modeled after Google's BigTable and written in Java. It is built to deliver a fault tolerant way of storing large quantities of sparse data. HBase features compression, in-memory operation, and Bloom filters on a per-column basis as outlined in the original BigTable paper. Tables in HBase can serve as the input and output for MapReduce jobs run in Hadoop, and may be accessed through the Java API but also through REST, Avro or Thrift gateway APIs. For building a high performance, scalable and dependable application around HBase, it demands a good understanding and practice of its fundamentals and various moving parts. HBase Recipes is a unique book, utilizing a problem-solution format that gives the required practical experience with columnar databases, distributed file systems, distributed HBase, ZooKeeper and HBase, configuring, scaling, monitoring, tuning and examples of building applications with all this knowledge. This book presents pragmatic code 'recipes' for preparing to accomplish particular, specific tasks. All the topics have been arranged in general sections according to subject matter, so you'll be able to quickly get up to speed and become productive on topics and problem solutions of interest to you with virtually no trouble at all.

Feature

► 1. Aims to be first HBase code reference cookbook for book market. 2. Retail Trade: Aims to sell between the listed retail trade Sell Likes of 500 and nearly 3,000 units RTD. 3. Safari and books as db services: Hadoop highly relevant as of Dec 2013 OPD Safari report. 4. Tied to Hadoop/Big Data/Cloud Computing eco. It's also open source Java-based tech.

Migrating to Swift from Android

In 150 pages, Migrating to Swift from Android gives you – as an experienced native Android app developer – all you need to create native iOS apps using the latest Swift programming language. Starting with preparing your Xcode 6 IDE and introducing just enough iOS application framework fundamentals, you'll understand how to create meaningful Swift applications for iOS 8 immediately. After the short IDE setup guide, this book continues by providing guidance on how to translate your existing Android apps to iOS. Every topic comes with a tutorial project; you'll plan and structure your iOS apps following a typical top-down process using Xcode Storyboards. To implement use cases, common mobile topics are covered, including user interfaces, managing data, and networking with remote services. As you move through Part 2 of this book, you'll create simple and meaningful iOS apps with rich UI components to handle common CRUD operations locally and remotely. Part 3 demonstrates the whole porting process by translating a typical mobile app from Android to iOS 8 from start to finish. When you finish reading Migrating to Swift from Android, you'll be an iOS developer as well as an Android developer. And, you will be fully convinced you can create iOS apps just like you do in Android.

Feature

► Aims to be one of the very first books on Swift and iOS 8. Aims to be day and date with Fall 2014 Final Releases of Swift and iOS 8 SDK. Aims to be one of a kind focused book for those migrating to Swift from Android. iOS and Android are two of the hottest technologies and developer communities out there.

Practical Symfony 2

Practical Symfony 2 takes you through the process of building an application using the popular Symfony 2 PHP framework. While reading the book, you will build your own forum application, which makes you use every part of the framework. You will gain a strong understanding of the ins and outs of Symfony and what makes it so powerful. When you have finished the book, you will be able to build any application you want using the Symfony 2 framework. You will learn the basics of building your first Symfony page, using the Twig templating engine to style your page and getting the lowdown on Symfony's Controllers. You will use Doctrine to map a database to your project and learn how to query it for specific information. We also look at the essential topics of testing and security, using PHPUnit to set up tests, and learning how to validate input and to authenticate users. We close the book by looking at internationalization and translating your site to reach the most users.

Feature

► First book published about Symfony 2 development, most web developers will use (some part of) the Symfony 2 framework during their career
Uses a developer's approach to learning: Putting theory in practice
The book is written for developers of any skill level

Pro Office 365 Development

Pro Office 365 Development is a practical, hands-on guide to building applications for the cloud with Office 365. Combine Office 365 features out of the box with custom code to make the most of what this increasingly powerful and flexible platform has to offer. As an Office 365 developer, you have an amazing range of technologies at your fingertips. Build a public website with Office 365's authoring solution, and customize it with CSS. Create a declarative workflow application with SharePoint Designer. Use Access Web Database to publish your data on the web, or write Exchange and Lync applications that integrate with Microsoft's cloud servers. All these possibilities and more are covered. You also have unprecedented control and flexibility over how you use these technologies in your applications. With a powerful set of Office 365 APIs, you can now access and integrate Office 365 data directly into your web or native applications, with full control of authentication, authorization and discovery. This book will show you how to work directly with these APIs, and finally how to build your own custom solution that draws from the entire Office 365 user experience – productivity, communication and social collaboration – powered by Office, SharePoint, Exchange, Lync and Yammer. No prior cloud experience is necessary.

Features

► The only book currently available that covers developing applications and solutions across all that Office 365 has to offer
Requires ► no experience of SharePoint or Exchange, making it an ideal first move
► into cloud and collaborative solutions for .NET developers
Covers the new integrated Office 365 APIs, which offer exciting new possibilities to Office 365 developers

Beginning iPhone Development Objective-C Edition Using iOS SDK

The team that brought you the bestselling Beginning iPhone Development, the book that taught the world to program on the iPhone, is back again, bringing this definitive guide up-to-date with Apple's latest and greatest new iOS 8 and its SDK, as well as with the latest version of Xcode. You'll have everything you need to create your very own apps for the latest iOS devices. Every single sample app in the book has been rebuilt from scratch using latest Xcode and the latest 64-bit iOS 8-specific project templates, and designed to take advantage of the latest Xcode features. Assuming only a minimal working knowledge of Objective-C, and written in a friendly, easy-to-follow style, Beginning iPhone Development offers a complete soup-to-nuts course in iPhone, iPad, and iPod touch programming. The book starts with the basics, walking through the process of downloading and installing Xcode and the iOS 8 SDK, and then guides you through the creation of your first simple application. From there, you'll learn how to integrate all the interface elements iOS users have come to know and love, such as buttons, switches, pickers, toolbars, and sliders. You'll master a variety of design patterns, from the simplest single view to complex hierarchical drill-downs. The confusing art of table building will be demystified, and you'll learn how to save your data using the iPhone file system.

Feature

► Updates a best selling Apress and industry best seller, Beginning iPhone x / iOS x Development.

C# Deconstructed

Discover how C# works on the .NET Framework

C# Deconstructed answers a seemingly simple question: Just what is going on, exactly, when you run C# code on the .NET Framework? To answer this question we will dig ever deeper into the structure of the C# language and the onion-skin abstraction layers of the .NET Framework that underpins it. We'll follow the execution thread downwards, first to MSIL (Microsoft Intermediate Language) then down through just-in-time compilation into Machine Code before finally seeing the results executed at the hardware level. The aim of this deep-dive is to provide you with a much more rounded knowledge of the environment within which you code exists. As a managed language, it's best-practice to let the Framework deal with device interaction but you'll find the experience of taking the cover off once in a while a very rewarding one that will greatly enrich your appreciation of the C# language and the way in which it functions.

Features

► The only book that will teach you how C# really works on your computer! ► Provides an in-depth-deep dive through the hidden abstraction layers of the .NET Framework tracing the reader's code down through MSIL, Machine Code and beyond! ► Encourages readers to adopt a considered view of what they're asking C# to do when they write code and showing how seemingly trivial choice of code syntax and grammar can massively affect the execution chain.

Beginning JSON

Beginning JSON is the definitive guide to JSON - JavaScript Object Notation - today's standard in data formatting for the web. The book starts with the basics, and walks you through all aspects of using the JSON format. Beginning JSON covers all areas of JSON from the basics of data formats to creating your own server to store and retrieve persistent data. Beginning JSON provides you with the skill set required for reading and writing properly validated JSON data. The first two chapters of the book will discuss the foundations of JavaScript for those who need it, and provide the necessary understandings for later chapters. Chapters 3 through 12 will uncover what data is, how to convert that data into a transmittable/storable format, how to use AJAX to send and receive JSON, and, lastly, how to reassemble that data back into a proper JavaScript object to be used by your program. The final chapters put everything you learned into practice.

Feature

► Only book dedicated to JSON JSON is ubiquitous as the preferred data format for the web - Brings readers of all abilities up to speed on an essential web technology

C++ Recipes

A Problem-Solution Approach

C++ Recipes: A Problem-Solution Approach is Apress' solution for those C++ programmers looking for a handy code cookbook reference guide. It will be one of the first books to have the latest C++ 14 as well as cover some of the code templates available in the latest Standard Templates Library (STL). In this handy reference, you'll find numbers, strings, dates, times, classes, exceptions, streams, flows, pointers and more. Also, you'll have various code samples, templates for C++ algorithms, parallel processing, multithreading and numerical processes. These have many applications including game development, big data analytics, financial engineering and analysis, enterprise applications and more. A wealth of STL templates on function objects, adapters, allocators, and extensions are also available. This is a "must have", contemporary reference for your technical books library.

Feature

► C++ Recipes aims to sell like dated competitor (see above) and be one of the very first code cookbooks covering C++ 14. Aims to be day and date with C++ 14 release. Should sell well at both retail and database. C++ is a mature programming language that has new applications these days, especially with Maker and Big Data trends.
